Message-ID: <8omrfgmei1@news1.skynet.be>
Source record: 72776

Hi Gang,
i am looking for pictures and informations about the following receivers.
Could you please help me ?
My emailo : jmc@dproducts.be

HAGENUK DF-160 duplex filter, for 19" rack. German. Same as Drake DF-160
DEBEG 7220 empf�nger. German. Same as Drake RR-1 early version
DEBEG MSR-2 emf�nger. German. Same as Drake MSR-2
CRM 3702 recepteur, french text on front. Same as Drake RR-1 late version
CRM 3928 recepteur, french text on front. Same as Drake MSR-2
ELECTRONICS ASSISTANCE CORP. R8 receiver. Same as Drake RR-1 late version
ITT Mackay Marine 3022A receiver. Same as Drake RR-1 early version

Thank you, best regards to you and your family, 73

From: Bob or Chris Balonis <rmborcmb@penn.com>
Message-ID: <39AEF8F4.5C92AE2@penn.com>
Source record: 72777

Hi all,

Can anyone recommend a source(s) for modestly priced 100 mHz, 10x scope probes (for use with 465M Tektronix scope). Have noted a "Probe Master" reasonably priced but have no knowledge of quality. Any comments - please email if so.

Tnx, Bob

From: Tristan <tristan-m@home.com>
Message-ID: <28Hr5.43066$Ur3.456318@news1.sttls1.wa.home.com>
Source record: 72786

I have the 706. Actually I have two of them. Love them. I also know two people who have owned the FT100 and got rid of them because the face was too small. That's an issue when you're driving.

Antenna opinion...Don't get anything you have to fuss with when you are driving. You'll end up being frustrated with it. I tried a screwdriver, ham sticks, finally settled on a military whip that I feed through the icom wire tuner. It is really nice to push the button and transmit. Might not be as efficient as other units but I routinely work DX from my car so I'm happy with it.

By all means, if you have the room, set the operating/equipment table(s) away from the wall(s) about 3 feet so that you will have room to get around to the back of the equipment to deal with all the cables, wires, etc.

An alternative arrangement is to make the tables, etc. moveable so that they can be pulled away from the wall when you need access to the rear of the equipment.

Get real, Robert. Lets not put higher emphasis on Morse than it deserves. Morse, like vacuum tubes, was part of the "radio art" years ago. Now its just the hobby of a very small minority of the radio community.

Well, while I do like the price of the Radio Shack radio, it looks
like the handhelds win - after all, they are the cheapest since I
already have them. And it looks like I'll just have to live with the
little speaker microphone. Thanks for the tips all.

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal
fundamental frequency. Merely supply International with
the exact receiver model number, printed on the rear label,
and the frequency you want to monitor. They will perform
the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second
local oscillator crystal is 11.155 MHz regardless of band.
On VHF high band (148 - 175 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this
formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700
series, one for each local oscillator. The crystal
formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the
first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) /
10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

29. Channel bandwidth using TNC/FM transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-01 16:14:38 UTC
From: whrudey@mdsi.bc.ca
Message-ID: <8ookkq$s1c$1@nnrp1.deja.com>
Source record: 72706

Hi All,

When you interface a host, TNC, and an FM transceiver for packet radio, if you use a standard FM transceiver, do you have any control over the RF channel bandwidth?

If its a standard FM transceiver, operating in the VHF/UHF bands, what is the typical bandwidth used for voice communications in each of those bands?

Can I alter this bandwidth to support higher data rates for a packet radio application? Without opening up the radio?

If not, do you know of any FM radios that support > 9600bps packet transmissions using a higher end TNC?

My understanding is that the SNR and the RF channel bandwidth ultimately control the effective data rates. If the two hosts in a point to point connection are relatively close, I believe the SNR will be good. However, my uncertainty is the radio channel bandwidth.

Thanks in advance!

Yes, simply (and it is simply) the amplitude of the input signal has a
relational value to the deviation.
This is overly simplified (so don't flame me about modulation indicies and
bessel functions please) but for practical purposes with commercial amateur
transceivers, that is a good rule of thumb.

> If its a standard FM transceiver, operating in the VHF/UHF bands, what
> is the typical bandwidth used for voice communications in each of those
> bands?
>

Amateur radio transceivers are designed for 5KHz deviation which relates
directly to used bandwidth.
(remember that with FM, you always will have an infinite number of
harmonics -- it is just a matter of the amplitude of them)

> Can I alter this bandwidth to support higher data rates for a packet
> radio application? Without opening up the radio?
>

no, not really

> If not, do you know of any FM radios that support > 9600bps packet
> transmissions using a higher end TNC?
>

No, most modern Amateur vhf/uhf radios do accomodate 9600bps -- but that is
the data rate limit. This is due to the FCC bandwith limitations for
frequencies typically used for packet (2 meters and 70cm) - higher data
rates will require either non-amateur equipment or modification.

> My understanding is that the SNR and the RF channel bandwidth ultimately
> control the effective data rates. If the two hosts in a point to point
> connection are relatively close, I believe the SNR will be good.
> However, my uncertainty is the radio channel bandwidth.
>

using the word 'ultimately' does make the statement correct. Some things to
consider is modulation techniques. Pure FSK gives you an easy data rate =

bandwith equation. but there are things as PSK, QPSK, QAM, etc, that greately increases data rate without increasing bandwidth (which is why you can have a 33.3Kbps modem on a 3khz wide telephone line)

Point to point doesn't really enter into it, unless you mean line-of-site. Then it is easier to achieve a good SNR. But with FM modulation, you just need a SNR good enough for 'capture' then the rest of the S is not needed. It is why most antenna designers worry about Gb/No.

Now all these replies are in relation to Amateur radios in the marketplace. What you want is someone to be knowledgable about specialty data communication radios. But, you asked in the amateur.equipment forum, so I answered in an amateur context.

I hope you get some more detailed answers from someone more knowledgable (and before this group turns completely into a FA advertising forum)

Probe Masters is OK. Not as good as OEM, but OK. Every non-Tek probe
I've used, especially the 10:1 / 1:1 switchable models from Probe
Masters and other vendors, has eventually turned into an intermittent
pain in the butt.

I'd look around on ebay for a genuine Tek probe, myself, but failing
that, PM is as good as any of the aftermarket probe vendors.

Well, I've said it once, and I'll say it again, being a radio dealer in the USA is apparently a very lucrative enterprise, so much so that they can turn away business at the drop of a hat...

I recently placed an order on line for a radio at a well known radio dealership in the mid-west, valued at $360.00.

It was a home run for me as it was a very good price for this model, and I thought a home run for the dealer, as this was an automated sale, instant, no fuss, no muss, shoot it out and make a few bucks.

However, I requested that the item be shipped via USPS Priority Mail, insured, to my P.O. Box. The dealer refused.

Even though, I the customer was paying for the item AND shipping charges, whatever they might be, the dealer refused to do as I, the customer asked.

They stated it was too much of a hassles to have someone go to the post office to send it out, and their experience with claims has been that they have to wait a long time to get paid from the USPS. This is of course assuming they have a claim.

This may all very well be true, but I truly believe that it is pure laziness. They have been spoiled by the pick up service of UPS.

In my opinion, the service from UPS as is bad or worse. I recently purchased a humidor from someone in New Jersey, and they shipped it to me, also in NJ via UPS. Normally, this is next day delivery, yet UPS sent it to Ohio, and it took seven working days for me to get an item shipped within my own state.

On the other hand, I have been sending and receiving items almost exclusively via USPS Priority Mail, and I have NEVER had a problem. I received a package from the west coast in three days!

So, I am leaving my current job and opening up a radio dealership. If business is so good that I can turn away business, and refuse the customer his request, than I will be rich very soon.....

Why don't you share the name of the dealer so everyone who reads this
can boycott them for you? Or better yet, why don't you just take your
business elsewhere - if enough folks do the same, that 'lucrative'
radio business won't be for long...

I don't recommend this. I once had that happen too, but I asked the dealer to ship via armored car because I had good experiences with that and I was paying the freight bill and other than the occasional armored car robbery, my packages were always taken good care of. And the darn dealer refused because he paid his employees to sell product, not be shipping clerks or errand runners to the armored car service. I was so mad I opened a dealership. Well that wasn't the bad part. The bad part was after I got in the radio business and found out I could only make about $60 on each radio, and that I could only sell about 10 of those radios a week, I couldn't make enough money to keep my employees, my dealership, my Mercedes, my homes in Florida and San Diego, or my wife and her four 10 carat diamonds. Boy was that a mistake.

Share the name of the dealer with us. It's been proven in the retail business that for every ONE person that complains there are at least TEN that do not and at least FIFTY that hear about the "bad" experience.

Dan

Most dealers ship UPS.
For them to refuse Parcel Post
is what I would have expected.
UPS works fine.

42. TS-830S Transmitter Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-01 21:51:30 UTC
From: Steve & Monica Goldberg <mostgold@pacbell.net>
Message-ID: <39B024E2.827C7989@pacbell.net>
Source record: 72719

Hi All,

My TS830S has been working fine for years (except for a couple of very minor problems). I got on the air this afternoon, made one contact, and then....the transmitter died, suddenly. I have a feeling it was related to high SWR on the antenna.

Anyway, the receiver is fine. I do have high voltage (per the meter reading). However the idle plate current meter "pegs" when switched it 'IP'. It should read about 60ma. normally.

1) Any ideas?

2) Does anyone have a service manual I could buy or copy?

Thanks,

Steve

>They stated it was too much of a hassles to have someone go to the >post office to send it out

So you expect them to send a paid employee to the post office, pay travel time and wait time, vehicle expenses plus extra admin time to go around their automated efficient computerized shipping system to manually process an exception for you?

If you were an employer you would know this little courtesy you expect for free likely would cost the employer fifty dollars or more in time and expenses. If you disagree, you've never been in business. The *average* cost of an employee to the employer is 2.71 times their salary. Ask me how I know. I employ nine people.

Their job is to get the thing to you, which they are set up to do using a system which has been reliable for them.

You weren't going to pay for shipping charges "whatever they might be". You were willing to pay the dealer's UPS charge, which is probably pretty reasonable if they are doing any kind of volume. You wouldn't pay what it really would cost the dealer to make an exception for you.

You expect a lot from the place who offered to sell it the cheapest. They may make 5 points off the sale to you, after you called 10 other places on their respective 800 #s and beat them all up for the lowest price. The place you called wouldn't be the lowest price if they were running all over shipping by whatever method the customer demanded.

They would lose money on that sale to you so they, properly, declined.

And you have the freedom to spout off all over the web and take your business elsewhere. I bet none of the dealers lose any sleep over it.

For reference, we ship only by USPS or FEDEX, several hundred a month. I'm not defending UPS, just the dealer's decision.

44. TenTec Scout to Icom IC718 Upgrade or not???

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-01 23:06:31 UTC
From: Kline Wilson <tennis@olypen.com>
Message-ID: <7BWr5.330323$t91.3592093@news4.giganews.com>
Source record: 72721

Hi,

I have been using my TenTec Scout (almost a REAL radio) for over a year and like it a lot. I would like to get just a little more power, but can't find any amps in the 200 w class.

I am thinking of getting an Icom IC718. That would move me up to 100w (from 50) and into the world of digital radios. It would have almost as many features as my TenTec Scout and twice the power. The DSP might be an improvement, and the digital memories would be nice. VOX and split vfo's would be nice, but the added complexity and size are minus's. Also QST report on the built in keyer was not the greatest.

But it is a lot of $$. Would it be worth it?

73s and tnx Kline w7cnn@arrl.net

Source record: 72724

The first post was right. I tried a TT Omni6 with a Herc 444, and that
RF spike that the Omni 6 puts out would knock the 444 off line every
time, the two did not work or play well togther. I did have a good
operation with the 444 and a TS-830s, they did work well.

You along with many others here often miss the point of my posts.
They are always tongue in cheek, designed to induce some healthy
debate about this or that. It is alot better then the contuous run of
Mackey et al nonsense that we see here continuously.

That said, my purpose was not to start a "boycott" of anyone, and
yes, I was able to find another dealer more then willing to send the
item to me at the same price.

Dan

The name of the dealer is not important, though VERY common among most
of the dealers I have contacted. They simply refuse to ship USPS and
/ or to a postal box.

you have "lost" the grid bias, those tubes are now dead. If you look at them closely, you may see a pinhole in the plate, perhaps even the glass envelope too. Before you put new finals in it, be sure that you have fixed the grid bias voltage problem. This voltage must be present at the base of the tube.

I totally agree with you Ed UPS is the worst piece of garbage Co. i have ever used. Time after time they have screwed me. My co i work for feels the same they switched to roadway and have alot less headaches.

I am sitting here waitn for a UPS RED label next day to get here.. NOTHING has arrived and its now 430pm.. they are assholes and dont give a crap about one package here one there not being on time.. Well we dont have to use them and i wish some Dealers would not use them I would pay a higher price to get my stuff here on time and in good shape.

Apparently most of you clowns missed his point completely. If he had wanted to do the business any harm, he would've let us know the name. He didn't - provoking an interesting discussion that had little to do with scanning, but provided an alternative to the typical mackey/etc. bash-a-thon.

Bud

What is "extra mile" about having something shipped via USPS Priority
Mail? Explain.

>You want to pay the absolute lowest and then demand service the rest of us
>pay for by buying retail.

OK, then Rambo...and you pay the absolute HIGHEST price for your
stuff? What in heaven's name does having something shippied USPS
have to do with "services" you get a retail? SHheeeesh.

>let me guess - you a Democrat!

Oh brother.....this person really is a moron.

>I think you SHOULD open up your own business and learn a little. Try
>selling at razor thin margins and find one or two assholes burn you through
>a mail order sales scam (PO Box & next day Alert!!!!) can cripple your cash
>flow.

Do you know what sarcasm is? Tongue in cheek?

>you want service, pay for it.
>
I offered to pay the additional costs necessary to have it shipped the
way I wanted, and they refused.

>and, FWIW, I much prefer USPS priority too. It is a lot better than UPS.
>
Well, the ONE thing we agree on....

The P.O. Box is the best way to receive items via USPS Priority mail
for both the shipper and the receiver.

The shipper is assured of a secure area where the package will remain
until being picked up, and the proper signature(s) obtained for the
insurance and the delivery confirmation. No worry of them out on a
truck, being left anywhere, without proper signatures obtained,
etc....

I am assured that the package will not be left at my doorstep or worse
when not at home. I do not have to be home, waiting endless hours for
a brown truck that never arrives when it is supposed to.

A win - win situation for both. I have shipped and received over two
hundred items this way without a problem.

Since I will never have an item shipped via UPS again, your suggestion
is moot.

How ironic.
Once upon a time, a radio seller advertised an extremely lightweight item and accessories for sale on the newsgroups that included an $8 shipping charge "via USPS Priority Mail to the lower 48." A curious sort when it comes to efficient logistics and hoping to learn something, I asked why he would not ship to Alaska and Hawaii and weren't shipping costs via Priority Mail the same as to "the lower 48"? The response that I received was somewhat startling:

"Probably....but I prefer NOT shipping to Hawaii or Alaska for various reasons. It is my perogative.
OK? Interested in the radio?

This is why I keep going back to Ebay.."

That radio seller? I'll let you guess.

I do business all the time with a large hobby dealer, Tower Hobbies, who is more than happy to ship USPS on request. Any business of decent size has a postage meter and a scale. _SOMEHOW_ the outgoing mail has to leave, too. Does this business not pay bills? Nowadays, one can even buy postage via outlets such as stamps.com if no postage meter is available. Some folks actually use PO boxes as their home address, especially many apartment dwellers and some country residents. It's not that far out of the ordinary for such a request to be made.

No one, other than the US Postal Service delivers to a PO box.

I'll throw my two cents in here:

I shipped a glass item via UPS (mistake) that was packaged according to their standards and labeled all over as fragile. The item arrived at the buyer's address with a boot print on the box, which was crushed, and the item inside broken. I do have to say that UPS was fast on the refund, however, I too prefer USPS Priority Mail Shipping over UPS.

That's the way they do business. They have the right to refuse your
business for whatever reason.
>
> They stated it was too much of a hassles to have someone go to the
> post office to send it out, and their experience with claims has been
> that they have to wait a long time to get paid from the USPS. This is
> of course assuming they have a claim.

Well you said it yourself...
"I thought a home run for the dealer, as this was an automated
sale, instant, no fuss, no muss, shoot it out and make a few bucks."

You created fuss, muss and turned an automated sale into a separate trip
to the post office.

In business when "it's a hassel" it really means...
"My profit margin is already slim on this item and it aint worth it cuz
I loose money."
>
> This may all very well be true, but I truly believe that it is pure
> laziness. They have been spoiled by the pick up service of UPS.

Whaaaaaaaa!!!!!! So what...that is the way they want to do it. As the
customer you did what you wanted...you stopped the purchase...welcome to
America.
>
> In my opinion, the service from UPS as is bad or worse. I recently
> purchased a humidor from someone in New Jersey, and they shipped it to
> me, also in NJ via UPS. Normally, this is next day delivery, yet UPS

Good for you. The company you dealt with must not like the USPS
much...so I guess you both loose.

>So, I am leaving my current job and opening up a radio dealership. If
> business is so good that I can turn away business, and refuse the
> customer his request, than I will be rich very soon.....

Then you will learn the real golden rule of business...
"The customer is always right...until they cop an attitude, Then we
reserve the *right* to refuse service to anyone."

Mark

SPEED-X semi-automatic, hi-speed telegraph key (bug) model 515.
Manufactured by Les Logan Co., San Francisco.
It appears to be NIB and unused. It is mounted on the original piece of wood, cut to fit the bottom of the box. It appears to have never been removed form that base. The original instruction sheet is included which bears a date of September 15, 1941.

One good reason...just one.

It is my perogative.
> >OK? Interested in the radio?
> >
> >This is why I keep going back to Ebay.."

You use ebay because of the money don't you? Or do you use ebay to "pass
on good will to the radio public"
>

If you don't see it then you are blind.

So your "tounge and cheek stimulous" just backfired and made you look
like a complete dork.

So much for an attempt at tounge and cheek.
>
> IF I had agreed to ship to those states, were you ready, willing and

>
> First, I am an individual seller, not a dealership. My income does
> not depend upon selling radio equipment. It was my perogative not to
> ship to those states. Period.

C'mon.....let's have that reason....
Let me guess what it is...
If you ship to alaska and get screwed you are afraid that that person
will skip to Hawaii and you won't be able to take the bus to kick his
ass. Maybe the people of Alaska and Hawaii are just all strange?????

Fine, open a dealership. Let's see how much money you make standing in
line at the fucking Post Office.

You COULD have asked for overnight service from UPS or any other
pickup-type service -- but apparantly you were too damned lazy to make
that request.

Have a good day.

>
>Good for you. The company you dealt with must not like the USPS
>much...so I guess you both loose.

Well, I never asked them to ship it USPS, I simply accepted UPS. It
was a humidor, a small item, about 50 bucks, and I figured it would be
overnight from NJ. I was wrong.
The driver told me that UPS CANNOT get people to work loading the
trucks..this is the result of such a good economy. He told me that
they cannot even read, they are so pathetic.

>>So, I am leaving my current job and opening up a radio dealership. If

>reserve the *right* to refuse service to anyone."

Well, that would be true if I did in fact "cop" an attitude, which you
assume I did. Which I did not.

I asked them if they could do it my way, they said no, and we parted
company in good terms.

Source record: 72745
Cross-posted to: rec.radio.swap,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.scanner

Due you have a need for an SMA-TO-BNC antenna adapter that is custom
made to fit and protect your H.T. or scanner radio?

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connection wear or from coming loose due to always
having to change antennas.

Adapter features:
Gold contacts with a teflon insulation.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed
for moisture and dirt protection.
The base provides an excellent support for any length of antenna or
application.
No need to remove once installed to make any antenna changes.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, VX-10, FT-50-R
Icom: IC-R2, IC-T8A, IC-T81A, IC-Q7A
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine.

Ditto what Rich wrote. I have a 706 as well, pretty much the same setup.
The display is easier to read than the FT-100 as it seems to be a bit
larger.
Have had a 706 in my itty bitty Ford Escort for almost 2 years now with
good results.

Mark,

This post was made to invoke some debate over an experience that
happened recently in an attempt to purchase something from a radio
dealer. Not exaclty on topic, but could be as we all have to get our
equipment from somewhere. Anyway, I thought it would be better then
the Mackey, et all crap we have been seeing here lately.

I can debate my position with anyone, and enjoy the diatribe, tongue
in cheek or not. However, I am concerned when I see responses like
the one below from you and the Winstead character, which become
venomous attempts to attack me. How sad.

Well, back to the debate......
>

>> >
>> >This is why I keep going back to Ebay.."
>
>You use ebay because of the money don't you? Or do you use ebay to "pass
>on good will to the radio public"

Yes, because of the money. That is why I sell my equipment you fool,
to get as much of my investment as possible back. Anything wrong with
that? Why do you sell YOUR equipment, Mark? To pass on good will to
the radio public? (radio public?) Do you give your equipment away?
Ever? I have. For free. Ask me and I'll tell you about it. My
perogative.

>> Again....I am sure you are trying to equate my tongue in cheek
>> stimulous for dialogue to this incident which WAS private between two
>> individuals.

Maybe they are 2 different business models. They are not Grove. If Bob
grove suits you better than use him. To say "Grove does it this way" is
moot since you are the customer and have a right to choose.

Jeezzzzz Do I really gotta go into business 101 with ya?

I based that on the attitude you had in the first post. In later post
you claimed it was all "tounge and cheek", it became clear just how
unrealistic you were reacting so you claimed the whole post was "to
stimulate discussion".

Ok...You stimulated discussion...a stupid one...but better than the
other crap that was flying around here, so I will give you points for
that.

But I have to take points away because you didn't get past the troll
gate.

Agreed, you need to worry about leading edge spikes. My Kenwood TS-440 worked fine with my old 444 amp, though, as did my Ten Tec Corsair II.

One other thing about the old Hercules I, the transistors are no longer available for them. Well, you can find them but Ten Tec says the right ones, properly matched, are no longer made so the ones you can still buy at RF parts won't necessarily work.

Still a good amp if you take care of it.

91. HELP... can someone ID this Heathkit meter?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-02 02:40:08 UTC
From: k5dh@qsl.net
Message-ID: <cMZr5.2028$gq.24607@read1.centurytel.net>
Source record: 72663
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.amateur.equipment

I have a plate current meter from a 1950s Heathkit transmitter
I *think* it's from a DX-35, but I'm not sure. Can one of you
tell me which rig it's out of? Here's the link...

http://www.qsl.net/k5dh/images/meter.jpg

The caption reads D.C. MILLIAMPERES
The top scale reads 0-50-100-150 (definitely plate current)
The bottom scale reads 0-2-4-6 (probably grid current)
The "Heathkit" name is written in their typical 1950s script

Sorry for the blurry picture. I had the meter laying on the
bed of my scanner (which is a $99 cheapie!).

Thanks and 73,
Dean, K5DH

Why would anyone want to use Morse Code in the 21st century?????
It makes about as much sense as rubbing two sticks together to make a fire
even though we have a butane lighter in our pockets.

Mark,

I do not want any of your "points" OK?

Who appointed you to give points to these threads anyway?

If you are unhappy with this thread, then why don't YOU move on? If
this is all so TRIVAL to you, WHY DON'T YOU MOVE ON???

> I did? Created fuss and muss by simply asking them to ship USPS
>> Priority Mail?
>
>You asked...they said no. It's pretty trivial.

>gate.
>
Again, there is no need to call me a troll, Mark. No need at all.

It really seems like there is no room for fun and an interesting
debate on these gropus after all.

It has been reduced to continual venom, name calling, troll
deisgnations and point giving by self-appointed, pompous people such
as yourself.

Now, do I really have to go into Courtesy 101 with you?

I don't think it's from a DX35. More likely from an AT-1.

Dan,
I agree 1000%! ---UPS is a gathering of the most inept bunch of idiots in the business! I do literally 10's of thousands of dollars in internet retail purchases/sales annually. The United States Postal Service is the most reliable and cost effective delivery system in this country! (I'm not afilliated with the USPS, in spite of my screen name. I just own one of their Jeeps.) .....And postaljeep.com

Ok...maybe dork was a little stiff, Sorry. You didn't do anything to me
except make me think "hey this guy is really having "an issue" with
something pretty trival.
>
> Do you always treat someone with whom you disagree with such malice?

Malice??? If you were sitting next to me I probably would have slapped
ya.
"Dan...wake up (slap) what are you thinking bro?"
Just a little luv tap mind you.
>
> > So much for an attempt at tounge and cheek.

Agreed.
> Well I tried, if you missed it then maybe I am the moron here.

No your not a moron...just a whiner.

Now lets talk about something more fun....

If I turn on a scanner in an airplane can I die?

If I listen to fast food channels does my food stay fresher?

can I get aids from listening to cellular?

> Well, this reveals your true stupidity.

> Well, I have no concerns about my integrity. I have bought and sold

Dan, I am with you on this one. I have to drive to work and home again every day, passing at least four different post offices. No big deal to stop in and mail a package. So you let an employee go home a half hour early ask them to stop and mail a box from the post office....done. I have been in this hobby 22 years and seen a lot of 'dealers' close shop especially right here in the phila area, so if it is to much trouble for them to ship usps will see how hard it is to lock the doors for the last time. John

Just because it's there.
Like playing a guitar for personal enjoyment, flying aerobatics, building up
gear from scratch, or writting "useful" computer programs.

It's not something you do because you have to, but because you want to.
Once you truely learn it, CW becomes a language instead of work.
Unfortunately with the time I've spent on the air over the last 15 years it
is again a bit of work.

Not the one I wear, but then again I paid dearly for that privelege.
The pole strap alone cost about 3X the advertized price for the belt and
strap combos I see in QST.

Polish with toothpaste and a soft rag. Will take a while as is slow, but will get most out if they aren't too deep. Polish a while and wipe off and look, need more? polish some more. I even did this on an old truck speedometer glass a couple of months ago to make it look purty. MK

Morse code is a means of holding down the number of people involved in ham radio. Thats all it is. It keeps out the CB crowd, but its really a dumb, old fart concept.
If you want to limit the numbers of participants in this hobby, copy the methods used by law and medical schools.

Morse Code is just dumb.

Fredric J. Einstein <feinstei@mw.mediaone.net> writes:

>Get yourself a real address instead of a P.O. Box number and you'll
>never have a problem with U.P.S.

That may be true inside the USA (though I'm sure other people have
UPS horror stories).

But for shipments from the USA to Canada, most Canadians that import
stuff have learned to avoid UPS at any cost. UPS accepts the shipment,
transports it to a UPS warehouse somewhere in Canada, then phones the
recipient and says that the item needs to clear customs. For a
small additional fee, they will do the customs brokering for you and
then deliver the item to its original destination. If you don't want
to use them as the customs broker, I don't know what happens. They
charge this brokerage fee even if there are no duties or taxes on
the item.

In other words, having stated a particular fee for delivering an item
to an address in Canada, and now that they have your item held hostage,
they demand more money.

Reputable couriers like FedEx and DHL include the brokerage charges in
the delivery cost, which is known in advance. If the item is sent
through the mail, Canada post charges a $5 handling fee for customs
(but only if there is actually some money due). I find both of these
approaches honest and reasonable. What UPS does is simply inexcusable.

Never, ever, use UPS for deliveries across the border.

Dave

Yes, I am the joke. Sorry for the tone of my post, but even if the
laptop were in absolutely perfect condition, a 286 model, at this
point, will not run any current operating system -- and most of the
new software available runs, for the most part, on some version of
Windows. It's a fine old laptop for software of the mid-1980s vintage,
but the problem is finding software for something that old. Also, if
it has no battery, it will have to be run off the AC transformer --
hopefully you still have that, and if the hard disk doesn't work, it's
not as if one can get hard disks that fit old laptops -- laptops have
all kinds of proprietarilly-designed components. If you can find
anyone who wants this beast, just don't charge them too much money for
it :-))

I still have an old Radio Shack Model 100 laptop, which is even more
ancient than your Compaq, but I'd have to give it away to get somebody
to take it...

Have a nice day,

Bob

I too have to side with the dealer. It's one thing to "ask" politely for a dealer to change his shipping policies just for you, it's another to "demand" it, whine & post disparaging remarks about the dealer because he didn't make the exception for you. This stuff always works 1 way. For example, say a dealer had a 5 day "exchange" policy. How would you feel if you walked in 48hrs later with a bad rig & was told by the dealer "can you please ship that HT back to the Mfgr, I would prefer you make an exception, I don't want to exchange it for you".....Would it be "normal" for him to say this, & would it be OK for HIM to post negative things about YOU because you didn't want to "make the exception"?? It is normal for SOME dealers to not ship USPS or Internationally or C.O.D or whatever... because it's a hassle for THEM, for their own legitimate reasons. They aren't "bad guys" for it , & you are free to buy from another place.....

I don't use CW anymore, but I did enjoy it for several years. It is interesting to note that the repeater ID's on amateur as well as police, fire, etc. still identify with CW. Those who enjoy QRP from campsites and remote mountain tops use CW almost exclusively. W5UN in the September issue of QST pointed out that CW is almost always used for EME moonbounce operations. And he runs 1.5 million watts of effective radiated power. CW is also a major part of dxpeditions, field day and contesting. Although there are many new modes of communication, CW is going to be around for some time to come.

Hi,
I'm looking for the soft case for the Yaesu Ft-530. I am looking for the larger case (CSC-58).
I have a new smaller case (CSC-56 and would be willing to swap if interested or if anyone might know where I could locate one.

Thanks
Gary

It sounds like another Ham that had a Larson mobile antenna. It was five
years old and broke. He could not believe Larson wouldn't send him a new
one. The jerk posted all kinds of ridiculous statements on NG and basically
sounded like this fellow....a born whiner COMPLETELY of touch with todays
realties.

> figure)

As a rough guess, vintage 1990. I have seen them here for as little as
$350. It depdends upon:

1. condition. The $350 one was beat up.

2. Filters: it receives and transmits am/ssb/cw though the optional 6khz am
filter is needed for listening to shortwave broadcasts. There are
slots (solder in) also for narrow ssb and cw filters.

3. FM. FM was an option. There is no CTSS (PL tone) option.

4. Receive sensitivity. TS-430's that sit around in a damp environment
become death to corrosion on the filter relays. There is an easy fix for
it, but this will detract from the cost.

One in good condition, with an SSB, AM and CW filter, and the FM board
could be easily worth $500 or more.

It hasn'tworked that way here.
Our area has a lot of no-code techs and many of them have been on for quite
a while. They also attend the emergency services training and have been
quite an assett to the weather nets.

>
> Anyone with any intelligence can do 13 wpm, and most of the people

Intelligence has little to do with code copying ability.
There are several thresholds with speed.
5 WPM can be memorized, but 13 is fast enough that you have to hear word
sounds. 20 is at the point where the subconscious takes over.
Each speed involves a different mode of copy.
Believe me, my subconscious does a much better job of copy than my
conscious. <G> Besides, at that speed I don't have to write anything down.

> I've been talking to on 40 meters are new hams, and confound it,
> they send better than us older guys.

Keyboards and keyers aside, they have better nerves and coordination.
than the "older" folks.

>
I think one thing most CW detractors don't realize is that once past 20 WPM
copy becomes very easy. Far easier than the 5 WPM.

CW is just another mode of communication. No more. No less. Nor is it dumb.
Those kind of statements come from people who don't like it, or don't have
the ambition to take the time to learn it. Learning code does not involve

inteligence, but rather nothing more than repetition. Just plain old repetition. That means devoting time, regular time each day to learn it.

Using half an hour, or so, per day for a couple of weeks should put nearly any one over the hurtle. It takes something like 10 to 15 hours to master the 5 WPM. About another 20-30 to make 13 and maybe 30-60 more to make 20.

It seems rather silly to still be debating the code Vs no code as the rules have changed and no amount of debating is going to change it back.
I do think they should have kept the Extra speed at 20 as the license has only been a "presteige" license for years. We only gained a tiny bit of CW space, which is plenty.

If some one does not want to learn it, that's fine with me. However to call a mode of communication dumb, is...well....rather dumb. There are many modes of communication and no one is likely to be using them all.

It's sortta like RTTY. It's still used, even though there are faster and to me, better, modes. I still don't consider RTTY dumb.

> I think, here, we have the lowest common denominator dragging things
> down. They know nothing, they won't learn, and .... well I could say
> more.
>

It depends on what they have to learn to pass the written.
I don't think passing, or not passing the code test proves much, except determination. The written test is the "brain power" part.

No amount of testing is going to weed out the malcontents and troublemakers. Not unless they add a physic exam. <snicker>

At one time many of those were Extras.

I haven't been following the news much and, until this summer, had been off low bands for some time, so I don't know what percentage of which group comprise the troublemakers. I guess I'll have to put up someting to listen to the 80 meter band and see if the one group is still there. <:-))
Since the tests went to multiple choice it has been possible to memorize the pool, or at least a vast mojority of it. Actually it's pretty difficult not to memorize for most people. It *just* happens after you go through the practice exams five or ten times.

I have had luck using cigarette ashes and a little water. A very fine abrasive and works very well. I do not smoke so the ashes are a little had to come by here. With all of the suggestions I would get a piece of old soft plastic and practice on it before using any thing on your lense. Better to find out you are doing it wrong on a scrap!

You simplu must learn to read the original post of a thread more carefully and not make assumptions...

1. I DID ask politely. Our discourse was quite cordial and we parted on good terms.

2. I never DEMANDED anything.

3. I did not "whine" but simply made a post. As I said, those who disagree with a point of view here call it whining.

4. I never made disparaging remark about the dealer. In fact, the dealer was intentionally left anonymous. I simply told a story. I wasn't asking for an "exception", simply a request. PERIOD.

5. The balance of your position does not apply. I doubt any dealer would post anything "negative" about a customer who complained about a store policy. It is the consumer's RIGHT to ask for service, question store policies, and so on and so forth. And yes, if not satisfied, go elsewhere.

If you are not an educated, demanding consumer, then you are a fool...

>Any help would be appreciated!!

Some other resources:

Micro-mesh makes an abrasive kit for polishing out scratches, including somewhat deeper ones. It has a series of grades of "sandpaper", except that the abrasive is actually on cloth instead of paper, and embedded in a rubbery layer. You start with an abrasive coarse enough to remove the deepest of the scratches, and work until the bad scratches are gone. At this point, your display window looks like hell - it's *all* scratched. But these are finer scratches, and you progress slowly up through the grades of abrasive getting finer and finer, each time removing the scratches left by the previous grade. It actually works fairly well, but be prepared to spend hours going through many grits for bad scratches.

What I usually use is something much simpler: a cloth buffing wheel in a Dremel tool. I usually use the cordless Dremel, which doesn't rotate too fast or create much heat. I use a sewn cloth buffing wheel, not the harder felt wheels, so it doesn't apply much pressure. I charge the wheel with Hut plastic polish, which cuts very gently. And I buff away. This doesn't remove very much plastic at all - it won't fully remove anything but the most superficial scratches. But it does round the edges of all of the scratches, leaving many fewer corners to scatter light, and the plastic looks much "clearer". If you catch a reflection of a point light source (e.g. the sun) off the plastic surface, you can see that there are still marks on the surface, but it looks much better than it did. And this only takes a few minutes - that's why I like the method.

The Hut polish is actually sold for polishing plastic on a lathe with the work turning. I imagine plastic polishes intended for use on powered buffing wheels with the work stationary would also be similarly mild abrasives. I would be wary of using anything more agressive without first trying it on some scrap first. It's really easy to mess up a large area in a hurry with a power-driven buffer - something you can't do on the same scale with hand polishing.

According to the schematic I have, one side of the 120v line goes to pin #4, and the other line conductor goes to pin #2. There are jumpers between pins #1 & 8, and #9 & 11.

A little caution needs to be used as the connectors made in Japan and the US can be numbered differently.

The important factor is the position of the pin. I will include the pin numbers from the schematic for the DC cable allowing you to corolate the numbers with what you have now.

For the DC cable the positive line goes to pin #2. The negative line goes to pin #10. There are jumpers between pins #1 & 3 & 11, pins #5 & 6 & 12, and pins #7 & 10.

I used Meguiar's Mirror Glaze. You can get it @ most auto/motorcycle shops.
It's a plastic polish and scratch remover in a blue bottle. The cleaner is
in a white bottle. I highly suggest it.

Regards,
Tony

Would you really be willing to pay the extra costs incurred for them to ship USPS? I doubt it. Assuming there is a Post Office within 10 minutes of the place of business we have about 30 minutes of travel time to and from the Post office including time to find a parking space which is usually in very short supply at a Post Office. I have been shipping a lot of stuff USPS lately and my average wait and time at the counter is in the 20-30 minute range no matter what time of day I go. So now we are up to an hour of someone's time. If they are being paid $9.00 hr then the burdened rate for the store is probably closer to $25.00 or more but let's be conservative. Then you have the mileage for the employee to drive their own car plus the time it will take them to fill out an expense report which they probably wouldn't have to do otherwise. And these are just the hard costs. What about the lost time that employee should be doing something else? How about the extra time to give them petty cash and then do the extra accounting? A not so creative accountant could probably justify an extra $50 in costs. Are you really willing to pay that?

So why was one store willing to do it? Because it is usually in their best interest to not set someone off who cries foul when they don't get their own way. At least you had enough sense to not name the establishment.

I have a TSU-32 from them in some of my equipment. The tones follow a typical
binary-encoded pattern, with all 0's being 67.0 Hz and all 1's being 203.5 Hz,
with the other patterns being the other PL tones in order.

I didn't "cry foul" with them, nor did I do it here.....simply
relating an experience, somewhat "tongue in cheek" to stimulate some
discussion. I think I have succeeded, despite taking a few hits from
the newsgroup police.

Your example makes the point, and of course I am not going to pay for
employees time at the post office, lines, etc. I don't do it with
Grove, where I buy alot of stuff, and they always send it to me USPS,
Priority, to my PO Box, no questions asked. I was willing to pay ALL
USPS costs, and reasonable handling charges. They declined.

Like I said, business is good.

Hello all...

Well, I've said it once, and I'll say it again....

Recent experience has shown a need to begin recruiting new members for the Radio Newsgroup Police.

Unfortunatley, these positions do not come with salary or benefits. You will however, have the satisifaction in knowing that your efforts will keep these groups the intelligent, open and free exchange of ideas we currently enjoy.

Requirements :

1. Must be able READ English at a 3rd grade level . (Some exceptions have been made for recruits in the past).

2. Must be able to write at a 3rd grade level . (ditto)

3. Must be pompous.

4. Must have the ability to read someone's post and determine whether the contents amount to "Whining".

5. Must be able to issue "points" to posters for their threads.

6. Must be able to identify "Trolls", and dispatch same at all costs.

Your duties will include scanning the groups for triviality, bullshit, mediocrity, and general poor taste. All based on the standards set by the Newsgroup Police, of course.

If interested, please submit your application publicly for review. Acceptance to be decided by the current Newsgroup Police membership, anonymous as they always are......

Thank you for reading my message today.

I can not remember the e-mail address for a list server I was on from Sanford University. Too many HDD crashes I guess. If you know the e-mail of the W6(YZ@stanford.edu?) Mail list please forward that address to me please. I would like to say my good bye's to those on that listserver as well.

Name here is Michael David Hiltner
Call is VE3VRQ (AKA: CF3VRQ), No doubt, I have QSL'd with many on 2m & 6m SSB!
Grid is FN13gx

I will be departing for Saudi Arabia on the 20th of this month, and have been notified that I will not be able to bring over any of my radio equipment into the country.

Since I will be there for 5 years, I have decided to liquidate my Amateur Radio Equipment Holdings. There is one station for intl radio users (about 300km from where I will be stationed), I intend to visit this QTH as much as possible.

Remember These items WILL be sold to the BEST OFFERED PRICE. There are only 18 days prior to my departure, so please Print &/or FWD this message to as many Radio Amateurs you know to get the widest exposure. Time is of the utmost importance. Do NOT hessitate on this offer! They WILL be gone before too long.

Items:

o Yaesu FT221r 2m
o Yaesu FT736r 2m / 440cm
o Mirage A1015g 100w 6m Amp
o GC Electronics 6m SWR & Power Meter
o General Electric (Shure Brothers) mic w/ 600ohm mic modification (This is what gave me my crystal clear transmitions on both my FT221r & FT736r!).

Buyer assumes the responsability for shipment / insurance of all of the above items.

Mailing address for your cheque:

Michael David Hiltner
VE3VRQ
18993 Loyalist Parkway

R.R.#3 Consecon, Ontario
K0K 1T0
Canada

Thank you kindly for your time & QSO's! I have enjoyed each and every opening I have been able to muster!

73 my friends! de, VE3VRQ, Michael

Excuse me for pointing this out, but....you're entire argument is
based on the inconvenience and cost of going to the Post Office to
ship.

This argument is rendered invalid in light of the fact that USPS picks up. At no charge. There are no extra costs, and no inconvenience.

Considering that their track record is better that UPS by an order of magnitude and their rates are lower by almost half, your position is not tenable. The business in question could have easily shipped by USPS and pocketed a profit on the deal over UPS. With no loss of convenience, or expended effort.

ICOM IC-706MKIIG

The unit has never been used on HF (I'm a no-code Tech). I even attached a 50 ohm dummy load to the HF RG-58 connector to prevent damage in case of accidental transmission. The rig was used for about two months on 2M/70 cm, after which I lost interest. Since then, it hasn't been operated.

All original documentation, packaging material, and accessories included.

Price: $900, shipped and insured (UPS ground)

Only US Postal Service Money Orders will be accepted.

If interested, e-mail me at:

StPatryck@yahoo.com

Please don't post replies to this newsgroup since I don't monitor them.

73,
Patrick

And how often if that, Larry? Once per every 100 contacts? Once per every 1000 contacts? In other words, lets not over state this "perceived" advantage. In the overwhelming majority of cases, voice will get through just fine. That is why voice is so widely used, and CW is not.

Hello,

Would you consider this an objectively fair trade:

ICOM 706MKII - Excellent Condition - (been mobile-minor blemishes)
Includes: DSP, "HM-77a" DTMF Hand Mic, Separation Cable, Non-Smoke Enviroment,
Mobile Mount (main unit), No After Market Filters, Working Perfectly, Box.

ICOM AT-180 Matching Auto-Tuner - Like New - No Scratches/Blemishes, Non-Smoke
Environment, With Cables and Jumper, Working Perfectly, Box also like new.

**** TRADE FOR ****

ICOM 746 - In Same Condition....

Summary: Is this a possible fair trade or way out of line?

Thanks & 73

Hi all,

I found my father's President HR2600 10 meter rig today and was thinking about wiring it up to catch the end of the Sun Spot peak, but don't know where the manual is.

Can anyone out there tell me what kind of amperage this thing draws? I've got a fuse inline, but it actually doesn't say how many amps it is. I want to have extras, in case something happens.

Best Wishes and 73s,

Robert Marshall

Well, if you ran 25 watts output, and assume a 50% efficiency of the finals,"could be better or worse". You would have a power input of 50 watts. If you had a power supply that was regulated at 13.8 volts, you would draw appx 3.62 amps to do 50w input. So you should have at least a 5 watt supply, but I would go even larger with a 7-10-20 amp for overkill and you can use the big supplies with about any rig. You want good regulation and you likely won't get it if you run your supplies on the ragged edge. You use ohms law to calculate this. MK

Unforunately, I would agree with the dealer (having an idea who it is)... I recently tried to ship a pacakge to a customer that purchased a scanner from me and he wanted it sent the the USPS! After 3 trips to the post office I told the custoner to take it UPS or the sale was off! The USPS is becoming a bunch of flaming idiots and they wonder why they are losing thier rears, even though all the big shooters now get "Large Bonuses" every year. Lots of new rules in place at the post office and they are "STUPID & CLUELESS".. My wife works for the post office and she even cehcked at her office and no one understands the rules and what they mean, each office and employee seems to have different opinions. SHIP UPS!!!!

I have a TS-50 and was wondering if it was able to handle a Heathkit SB-230 on the relay. I know a Icom needs a relay kit but I wasn't sure about the Kenwood.
Thanks
Dave

What's all this stuff about USPS being cheaper?? Compare Apples to apples. A dealer would be an idiot in my opinion if he threw my new $400 radio in an untraceable, no signature required Parcel Post or Priority mail box. A dealer would have to fill out all the various SEPERATE forms for "signature required", insurance, return receipt, etc....along with the postage.....some of these have to be validated at the post office making "free pickup" of the package also impossible. The dealer would also have to pay in advance the exact postage....which would now also be "in line" with UPS fees....Which of course, every package is traceable, insured, has Guaranteed delivery time (not just overnite like USPS) & pickup w/1 form for everything & "bill me later". An insured $400 mobile rig sent UPS INSURED w/ signature required cont US would take between 1-5 business days point to point & cost about $5-9 bucks. How much would USPS "save", apples to apples"?????

201. Connecting a FT-847 to an AT-120

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-03 18:54:25 UTC
From: Maurice W Wick <bigdog1@netins.net>
Message-ID: <B7xs5.8848$On2.562437@bgtnsc04-news.ops.worldnet.att.net>
Source record: 72577
Cross-posted to: rec.boats.electronics,rec.radio.amateur.equipment

Ok, I had the AT-120 connected to a SSB, and then I acquired a FT-847.

I'd like to continue to use my backstay for HF, but I'm a bit
perplexed on how I can get them to work together.

From the manuals:

AT-120 Pinout

1) E - Ground
2) 13.6V
3) Start - Voltage < +1V for more than 200 milliseconds when starting
the tuner. Line impedance is 47 kilohms.
4) Key - Line attaches to an open collector NPN transistor with 100
milliampere
current capability to ground. The line is LOW level during
tuning which switches the RF output power from the
transmitter to 10 watts. Impedance is 10 kilohms.

FT-847 'Tuner' Pinout

1) +13V
2) TX Gnd
3) GND
4) DATA In
5) DATA Out
6) TUNER Sense
7) RESET
8) TX INH

Any help would be appreciated....I'm going bald and would like to keep
my hair as long as possible.

UPS stands for "United Pilfer Service". UPS had long had a "we don't give a shit" attitude. They are often late, frequently damage shipments and act like they couldn't care less when it comes to customer service and complaints. Not only that, it takes least a month to get CODs paid. One time it took over 3 months to get my COD money from UPS.

I have never had a problem with USPS Priority. Given the choice, I'll take USPS or FedEx. Everyone I deal with at our post office is knowlegeable about shipping, I ship USPS at least once a week.

So, have you pissed on a UPS truck today?

Jon,

The UPS drivers themselves admit that the people working in the
distribution centers are borderline neanderthals....!

The workers at the USPS are rocket scientists next to that gang.

Compare the bang for the buck with a new Icom 746.

Right in the middle, size wise -

but with 100 watts on 2 meters, DSP, very intuitive
user interface, and is in current production, comes
with a 1 year warranty, computer controllable out
of the box with Icom's CD and cable, and has what
appears to be the fastest built-in tuner in the
industry with 2 selectable antenna inputs.

For about $1300 new.

Again, interesting... Of the 60-70 shipments I mentioned above, about half had additional insurance purchased, some have gone Express Mail, a few were oversize. I've never had anyone question the tape I use or anything about the contents of the box or packaging methods. In fact, I sent a $400 R/C engine out on Friday, Priority Mail, insured, with delivery confirmation. The package was shipped in a used box with plain old 3M clear packaging tape.

I don't doubt your experiences at all, I may have excellent Postal Service employees in my area. I usually mail ALL of my packages from one of three small outlets, here in Connectict. By small I mean that they have about 35-50 PO boxes, three parking spaces, and one clerk. My favorite is an office known as Rockfall, CT, that shares a small wooden building with a deli. The USPS will mail you any supplies you may need, for FREE, via http://www.usps.gov . I usually show up with all the forms completed and Priority Mail stickers, tape, and labels already on the package, so the clerk just collects my money and stamps the confirmation and insurance forms.

Thanks,
Barry

Amplifier is in quite good condition, given its age! Bought from an estate sale ~3yrs ago. I'm too busy with other things to do any HFing these days.

Amplifier works fine. Has 3-500Zs and full output.

Price: $550/offers + shipping from Colorado Springs, CO.

Will have JPGs to look at soon.

216. Kenwood TM-231 poor receive

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-05 15:48:30 UTC
From: va3wbs@rac.ca
Message-ID: <8p34k9$p44$1@nnrp1.deja.com>
Source record: 72596

I find that with my tm-231a the inband receive isn't too bad.
Although the out of band receive seems to be a little on the poor side.
I realize when a radio has been modified for out of band operation that
you lose some receive sensitivity, but i have owned other units where
the out of band receive was just as good as the inband.

Is it normal for this unit to have such poor receive out of band?

I bought this unit used, and already modified. Is it possible maybe the
previous owner had somehow adjusted the receive sensitivity? Is there a
pot to adjust the receive?

Any help would be greatly appreciated.

Thanks in advance, Wayne

218. Plastic Antenna Tower

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-05 15:51:22 UTC
From: Paul Burgener <Burgener@Bigfoot.com>
Message-ID: <8p34pjpdh1@nnrp1.deja.com>
Source record: 72595

Bear with me, folks. I'm new to this NG. I'm not a HAM operator, but a close church friend is. I'm helping him design and build a 37 foot tower for his father's "180 meter" (as I recall) wire antena. I wonder if we're doing the right thing, structurally.

To give a visual, we're building a 37 foot tall "bar stool", with 4 legs, and a rigid support "ring" securing the legs, every 6 feet of height. We're using 1-inch schedule 80 PVC plastic pipes (aprox 1-5/16 inch diameter), and 40 or 50 plastic T fittings. 4 plastic pipes start (will start) secured in the ground with a 16 inch square base, possible in concrete, or maybe just set on burried bricks, with dirt back fill. The four legs gradually will converge to an apex, built with plastic fittings.

It's expected to hold little more than the single wire antena, but will include a pulley system to lower and raise the wire antenna and possibly other very light antennae (sp?). Absolutely no way will anybody ever attempt to climb this thing. The apex "assembly" will include 4 horizontal plastic pipes (aprox 10 inches long), that should allow for easy "targetting" with an arrow and fish line, if we ever need to send up another rope to hoist another wire or antenna up the side. This will be the back-up plan if the pulley system ever fails.

We assembled 18 (or was is 24?) feet of the tower without glue or any foundation, the other day, and set it upright on my driveway for testing. It seemed to wobble and twist easily when shaken by hand, but I assume that's acceptable until we get it supported well. There wasn't any wind that day, so we can't say for sure how the wind with affect it when complete. We expect to have the legs firmly planted in the ground, which will stabilize the structure a little, and secure the tower about 16 feet up, against the side of his father's house. Hopefully we won't need any guide wires for further support.

In the unlikely event the tower has to be lowered entirely, I expect we'd get a few friends to hold it (it's only about 30 pounds of plastic, I'd guess), while we haxsaw the legs. We'd then glue the legs back together, with couplings, if it goes back upright again.

Has anyone every had any luck or failure with a similar design for an antenna mast? I keep fearing we'll spend all this time and expense, and the thing'll buckle over, the first big wind storm we get, or the first time a sea gull (we're near the US east coast) sits on it.

You're going to have at least ONE problem... The primary path to ground will be through your feedline, not the tower. Lightning may be a serious problem (more than usual, that is.). I'd also worry about the ability to withstand constant flexing, since that is not a normal consideration for this material - it's usually underground, or fastened securely to supports every foot or 16 inches.

>Thanks in advance, Wayne

Wayne,

I can't speak for the TM-231, but I've owned several each
TM-221A and TM-241A, and currently own two TM-261A's. All
of them received well on the 2m ham band, especially the
TM-261A's, but none were anywhere near as sensitive outside
the ham band. This is especially true in a-m mode on the
aviation band. To my knowledge, there is no adjustment for
sensitivity in any of the Kenwood rigs. They're designed
for maximum performance within the 2m band, and anything
else is gravy. The receiver spec sheet in the manuals for
at least some of the Kenwood rigs points this out, stating
that the specs are guaranteed only within the 2m ham band.
Hope that helps! :)

If you get a cb handheld that can hook up to a base antenna you should get
out better than the built in antenna or rubber duck.

Source record: 72508

TenTec Hercules 444 solid state kilowatt linear amp for sale

I'm listing this amp for the xyl of a silent key friend of mine.
This amp is a solid state full break-in HF KW Linear. No tuning,
broadbanded. 1.2 KW PEP input all bands, 725W output typical. Blackout
meter panel. Factory mod for 10 meters has been installed (I think).
The Amp is in very good condition, styling to match the TenTec Omni C-D
Series. Power supply and
interconnect cables included. The power supply is a separate chassis.
Original owners manual included. 220V or 115 AC. $500 plus shipping.
(FIRM)
* NOTE- ACCORDING TO TENTEC, THIS AMP IS NOT USABLE WITH THE NEW SOLID STATE

RADIOS, DUE TO A LEADING-EDGE SPIKE ON THE RF SIGNAL. THAT SPIKE WILL,
ACCORDING TO TT, CAN IMMEDIATELY BLOW THE FINAL TRANSISTORS IN THE AMP,
RENDERING IT USELESS AND VERY EXPENSIVE TO REPAIR. HOWEVER THERE'S A WHOLE
LIST OF OLDER SOLID STATE AND TUBE RADIOS IT WILL FUNCTION WITH PERFECTLY.

I'M NOT TRYING TO SCARE ANYONE OFF BUT I'M SIMPLY BEING FORTHRIGHT WITH ALL THE
DETAILS AS I UNDERSTAND THEM SO NO ONE ENDS UP BLOWING THE AMP UP AND BLAMING
IT
ON ME.

As far as I know the amp IS in good working order but if not, your money
would be refunded
and I will pay for return shipping.

Also the fact that you will need to put considerable lateral pressure on the
very top of the structure if you want to pull a 160 meter dipole and
feedline up as flat as possible. My Tri-Ex WT51 tower "leans" the top
section a noticeable distance when my 160 wire is stretched flat - my guess
is PVC pipe will have a real problem...

I am newly licensed & am looking for the best dual band Handheld available.
I am thinking of the Yaesu FT-50R or the Alinco DJ-V5T. Any thoughts or
recommendations would be appreciated.

Hi -

I have a Swan L-412 dc supply. Possibly has a bad transistor or two so I need a schematic. Any readable copy would be just fine.

Or . . .anyone interested in this unit? I don't have any other Swan gear so I'd be glad to offer it to someone who could repair and use it for $20.00 plus UPS or USPS.

I want to put an HF rig in my classroom but it needs to fit three criteria:

Hard to destroy
Easy to operate
Inexpensive

I use an Icom 706 at home but don't really want to put this nice and relatively expensive radio in the classroom. Any ideas are very much appreciated.

From: bshale@north.nsis.com
Message-ID: <39b5a38b.6591581@news.ng.nsis.com>
Source record: 72525

Was wondering if anyone out there was a schematic or service manual for an Icom BC-72 fast charger? I use it with my IC2-sra. The HT has been to the shop twice this summer. First for a blown voltage regulator and dead lithium backup battery and now again for a blown VR. I sent the rapid charger along with the HT for the last trip to the shop. They inform me that the charger is providing excess voltage to the battery pack but they don't have technical info for the charger. I can fix the charger but the surface mount design in the HT was a bit too small for me to handle. Thanks... Scott VE1AFN ..>

Oh, any little radio will do -- just get one of those dealies they use
to chain & lock a computer to a desk, so people won't walk off
with it :-))

Course, when you add a power supply, speaker, mike, antenna tuner
etcetera, you end up with a lot of stuff.

Maybe something like an Icom 736, that has a built-in power supply
and, I think, an antenna tuner built in...

From: Ed <edleblanc@hotmail.com>
Message-ID: <wBit5.42369$i5.1918337@news1.rdc2.on.home.com>
Source record: 72529

I've lost the memories on the TM-701A after close to ten years of operation.
I opened the rig up but can't find the battery. Is it hidden somewhere?

The users manual does not give any indication where the battery is located.
Is it possible to replace it or will I be forced to send it off to a Kenwood
dealer to have it fixed?

Ed

ED-
I just replaced the lithium battey in my Kenwood TM 721 2M xcvr.....it uses a
3V lithium battery with solder terminals....it took me a while to find a
replacement, but if you have trouble, try Advanced Battery
Systems...they were very prompt and
reasonably priced. I think you will find the battery behind the front panel
assy (the
assy with the LCD display and controls).
It is necessary to take the assy off the radio and you should find the battery
soldered to the back of the assy.....it fits
in a very narrow space between the PC board and an aluminum support. Anyway,
good luck. The battery part number for mine is 2032 (with solder
terminals)....be
careful to get the polarity correct!!!!

I have on occasion 'won' items on eBay, and had the misfortune to have the items sent to Canada by UPS. On one package form California, the cost including shipping to me was about 40 dollars. I sent the money order. When the package got here, UPS charged me ANOTHER $38.00 for having to remit $1.26 to the government for 'tariff' fees. On another occasion, I 'won' a $10.00 set of machinist's guages. I sent the $10 and $6 shipping. I was at work when the truck came to the house, so my unknowing wife paid ANOTHER $25 to the truck driver for a 'brokerage' charge. Whatever savings I had made by my 'shrewd auctioneering' was lost, and then some. After that episode, I asked all shippers Not to use UPS for anything sent to me, as I will send it back. I hate UPS and I discourage people from using them every chance I get. They act like thieves and do not deserve your business.

mike in Canada...

255. ICOM 706MKII & AT-180 **FOR** ICOM 706MKIIG?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-06 04:18:31 UTC

Source record: 72532

Hello,

I am wondering if someone would be interested in trading my ICOM 706MKII & ICOM AT-180 for your ICOM 706MKIIG ?

FOR TRADE:

ICOM 706MKII - Excellent Condition - Includes: DSP, Separation Cable, Non-Smoke Enviroment, Mobile Mount (main unit), Working Perfectly, Box in excellent condtion w/ Manual.

ICOM AT-180 "Matching" Auto-Tuner - Like New - (6m - 160m), Non-Smoke Environment, With Cables and Jumper, About the same style and size at the 706 line, Working Perfectly, A nice piece, Box also like new.

**My IC-706MKII and AT-180 are a very nice setup and work perfectly, but I have the bug to make a trade and don't have much free cash, hence letting the AT-180 Auto-Tuner go. I know I will miss the AT-180 tuner but I can always save for one to get later...

Thanks & 73

Sounds a bit "shaky" I hope no one ever intends to climb this. If you get it up, be sure to fill the legs with cement to above ground level and at that level, drill small weep holes to let condensate out. Otherwise, the winter freeze will burst the legs.

Hello,

I have an ICOM 706MKII & ICOM AT-180 "matching" auto-tuner for sale:

ICOM 706MKII - Excellent Condition - (I'm the original owner w/ receipt)
Includes: HM-77a "DTMF" Hand-Mic - (Purchased new, a must for 2 meter
auto-patch), DSP, Separation Cable, MB-62 Mounting Bracket(Base), Owners
Manual, Comes with Box also in excellent condition.

ICOM 706MKII = $775.00 Shipped/Insured

ICOM AT-180 - Like New - (Tunes 6m thru 160m, Matches IC-706 Style & Size)
Includes: Cable & Coax Jumper, Gets power from "control cable" connected to
ICOM 706, complete with box, also in Like New Condition.

ICOM AT-180 = $350.00 Shipped/Insured

Both are working perfectly and compement each other for a nice base station
while the IC-706 series have a proven mobile following...

Thanks you & 73

I bought a Yaesu FT8100 about 1.5 years ago and found that in both of my vehicles (Ford products) I was picking up what sounded like alternator whine, well I tries various remedies suggested in the newgroups and nothing worked! I finally had enough one day and played around with the radio and an HT only to find that the noise was getting in through my antenna coax. The simple solution I came up with was to wrap the coax around a flyback choke I pulles out of an old VGA computer monitor....about 8-10 wraps did the trick and I've not had the problem since! Hope this helps someone out there with the same pain-in-the-butt problem!

259. HT750 Programming Help?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-06 07:23:46 UTC
From: Darren King <darren.king@sympatico.ca>
Message-ID: <6imt5.236487$1h3.4416469@news20.bellglobal.com>

I have a HT750 Motorola VHF 16 Ch Radio and when I want to talk with someone else's radio I have to reprogram, but I've been over the Motorola website and check many sites on the web and couldn't figure out what I need. I found Pin out diagrams for the connector, but thats really not enough. If somebody has the software or could tell me where to get it I would greatly appreciate it.

Darren

"Edward Dowdy" <elIhatespamdowdy@home.com>
shared these priceless pearls of wisdom:

->Kenwood TS-130 or 140.

Second the motion. I've been using a TS-130 on and off over the years for the high school and college station and have yet to have anybody really mess it up. Besides, you can run the whole station (HF & VHF) from 12 volts and that keeps the "shock" hazand and resultant liability to almost zero.

John;

Thanks very much for your help. I had a feeling the battery was located somewhere like the front panel but I didn't want to take it off unless I had a good idea that it was there. I will give it a try.

> manual for an Icom BC-72 fast charger? I use it with my IC2-sra. The

If it's anything like the BC-79, don't waste your time. I tried for months to find a schematic but no luck. ICOM said they don't have anything. A new charger from ICOM is over $200.0 Can., so I bought a MAHA MH-C777 charger/conditioner for $99.00Can. It will charge any NiCD or NiMH battery up to 12 volts,and will work off either AC or 12dc. Well worth the 100 bux and it really does work great.

I bought a Kenwood TH-D7A. I absolutly love it. It is more than a dual band HT though, it has a built in TNC and built in APRS. I run APRS with it all the time and it works great. I haven't used the TNC (except for APRS, but you know what I mean) so I can't say how nice that is.

Another nice feature is the built in Duplexor. I can be listening to two different bands at the same time, and if I remember right, I can even transmit on one freq while monitoring on another.

It's very durable too. I ride ATV's in the Upper Peninsula and took it riding with me. I clipped it to my belt and put a headset on under my helmet. It took the beating and performed flawlessly. (I ride a Banshee, which, if you know anything about quads, you know that it is a very FAST ATV).

Anyway, I really like it and wouldn't think twice about recommending it to anyone.

I am getting ready to send my TH-D7A in to Kenwood to have the (G) upgrade performed to it. The service center is telling me they normally complete the upgrade and send it back to me within a few days of recieving it. I was wondering if anyone has actually sent one in and what I should realistically expect as a turn around time. I'm going up north in a week and a half and I want to take the HT with me.

Thanks for any help anyone can provide.

For sale, T3020BX Motorola DES keyloader.
Works great. Has some white lettering on case,
does not impact operation in any way. Other than
that, looks & works OK. Comes with fair/decent battery.
No cables.
Charger available at extra cost (mostly due to
shipping weight - cheap, though).
Sale price: $125.00, shipped (included) to
to you anywhere in ConUS locations.

Hello, James and the group!

I've sent this to the group, as well as direct, since many tube rigs tune the same way!

Before you start, make sure that your I.C. (idle current) is set for about 60ma. This control is located on the back of the rig, or next to the final cage in some of the earlier models. You'll likely need an insulated screwdriver to set this control.

To Tune:

First, set the GRID control for maximum received signal (peak the noise).

Then, pre-set the PLATE control for the approximate band that you will be transmitting on.

Set the meter to P.O.

Next, set the t/r switch to OPER, and adjust the LOAD control for its peak on the meter. Next, adjust the PLATE control for its MINIMUM reading, and again, peak the LOAD. It may take two or three passes, but do them quickly! (remember...dip the plate, peak the load)

Be careful that the plate control is in the right 'neighborhood' for the band that you're on...you want to tune to that band, and not a harmonic. This is VERY easy to do on 40 meters!

Finally, set the meter for ALC, and adjust the MIC GAIN to keep your voice peaks in the green range.

For AM, set the carrier level (rear panel) to no more than one-half of the peak PO reading for the band that you are on, and adjust the MIC GAIN control so that voice peaks only move the meter up a slight amount...overdriving the 6JS6C's will quickly prove fatal to the tubes!

The rig should provide 120-150 watts out on SSB, and about 40-50 watts on AM. This will drop as the frequency increases.

73!

Bill WA3RA

286. Re: ICOM IC-28A HELP!!!!!!!!!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-06 23:36:34 UTC

Source record: 72463

The Icom IC-28A/H uses the same 8-pin mike layout as all 8-pin Icoms.

Looking at the front (with the guide at the top) , starting at the
top/left pin (1) and going counter-clockwise, they are:

1 - Mic Input
2. +8V DC Output
3 - Freq Up/Down
4 - No Connection
5 - PTT
6 - GND (PTT ground)
7 - GND (microphone ground)
8 - AF Output (center pin)

I'm ready to add an amp to my station and looking for some advice. I've had a couple of SB-220's in the past and would like to get another one if it would work well with my 756pro? If not the SB-220, what used amp would you folks suggest? I want something over a KW. Also, I understand I would need an external relay between the SB-220 and the 756pro, but what about the ALC connection? Will the ALC still work between these two?

As always, I appreciate any advice,

David, K4ZZR

Have a yaesu ft-900at that I am selling. This radio is in very good condition, has not been used in mobile operation and has been used very little. This has the built in tuner and from what i'm told, has a very good noise blanking system. I have the remote cable for it, manual and box. I just have other interests is the reason for selling and have not used it in awhile.
$650 plus shipping/insurance (No Trades and feel that this is a very fair price for a nice HF radio!)

Well,

I wasn't all that long ago but I remember when a great VHF/UHF station had a rig for each band. I had a IC-575H for 6m (it did 10m also) and Icom made similar rigs for 2m, 220MHz, 440MHz and 1.2 gHz, too. Before that I had a FT-290 for 2m which drove a Mirage brick amp. I'm sure many built transverters, too. Basically you had One HF rig and many tranverters or many band specific rigs that each drove it's own amplifier. Bad side, too many mics. Good side, they were all on at once and if one part broke everything else still worked. Besides, the shack looked a lot more impressive to the uninformed.

I will assume you are innocently ignorant and are asking this with the best of intentions.
I will further assume you are in the USA.

To broadcast that range is not a "very low-power" station and is clearly beyond the range
allowed by the FCC for an unlicensed operation. The FCC is struggling with congress
on this very issue of broadcasting.

You can build an unlicensed station that covers your church parking lot.

Otherwise it is a considerable effort to get approval for a low power station.

I purchased a Kenwood TS-440S about 6 months ago. Shortly after, it developed a problem. When it was turned on in the morning the Frequency Display would work for about 10 minutes then suddenly disappear. After about 30 min it would reappear but all stations would be off frequency for about another 30 minutes. Finally everything would work fine for the remainder of the day. If I kept the radio on until late night (early morning), it would work fine after being off for only 5-6 hours. This problem persisted - the time interval from power up until everything working gradually increasing. I had the lithium battery replaced several months ago but that didn't solve the problem. A couple of days ago everything changed. Now the frequency display keeps blinking ... all 88888's and all the mode lights stay on and the radio has become inoperable. Anyone have any ideas on what's causing the problem and what needs to be replaced?

Well, before I got my first "modern" V/UHF rig, an FT-726 in 1984, I used separate RX and TX converters for each band. That made a total of 6 converters to cover 50, 144 and 432. In the last year or so of such operation, I began using an HF transverter as the IF and modified the various converters so that they used a common LO for each band so that they would truly transceive. Before that, I used separate HF transmitters and receivers.

The amount of haywire in the shack could and did sometimes result in funny things happening. One morning a couple of solar cycles ago, I worked a bunch of stations in the Caribbean one morning before I discovered that my 6m RX converter had no antenna connected. Received signals were much better after I connected it although they weren't bad before. I think that says something about the quality of the RF shielding on the converter. I know that it says something about the radio conditions then compared to what we have had lately.

This topic has been debated for a long time. How'd you miss it? =)

Yes, using any modified AMATEUR gear for GMRS is illegal because the
equipment for is not type accepted for business or GMRS.

You can use modified AMATEUR gear for MARS/CAP if you're authorized.

Hi Mike,

I have the Kenwood TH-G71A handheld, its a nice compact unit that performs very well. However, like the FT-50 and many other compact ht's, you can monitor only one band at a time. So picking the best dual band handheld is going to depend on what features you want.

I hear alot of good things about the TH-D7A and the TH-79. They both have dual receive and are good performers.

For sale, Icom 765 HF rig. Stock radio. 500hz cw filter.
Runs from 110v outlet, no need for power supply.
Internal tuner works great. Has straight key input on
the back, and paddle input on the front (try that with
an FT-1000MP!) so you can use computer keyer and paddles
at the same time.
About an 8.5 of 10 (has a scatch or 2 on top where tuner
sat). Works fine on CW, drifts a bit on SSB (I know the
fix, can provide details). No mic. With power cord, manual,
orignal box. I'm 2nd owner, non smoker. Can provide
JPG's of radio upon request. Think the serial number
is in the 1600's range. This is one of the finer older
style rigs available, sought after by contesters...
$950 and I'll pay shipping to you, continental US locations.

Has anyone experienced a problem whereby you cannot key input any freqs
to the radio?

It appears the advanced function is "stuck" on.

The manual states by holding the mem key and pressing 1 for instance
will set the tens option for tuning, this 1 key can be pushed without
pressing the mem key.

I have measured the logic level form the mem switch and it does change
logic, so it's not stuck.

Anyone have one of these, I tried a memory reset by removing the lithium

battery, no difference, tried holding clear upon power up and no reset
occurred. There must be another way to re-set the radio?

Hello,
I want to be able to decode the WEATHER DATA that is heard on a local 2 meter frequency. The data is in TEXT form and I know people are able to receive/decode the data on a Tandy 300bd external modem. Does anyone know how I can wire the tandy unit to my radio so that I can start receiving/decoding the weather? Also I heard all I need is a basic terminal program to view the data.

Anyone who is knowledgable on this topic...please tell me what I can do to get this going.

Thanks

I don't know what it is, but I'll tell you a story about my TS-430.
Did the same thing pretty much. Problem kinda got worse and worse, until
one day it wouldn't turn on at all.
Good day because I was able to troubleshoot.
In my case, it turns out that the entire radio is slaved off a a master
clock which was done with a 60MHz crystal. This little fellow kept
drifting. Drifts a little, you go off freq, drift a lot and PLL looses
lock and the radio shuts down the display.

you never know -- but I might be worth looking at. The 440 master design
may not be so different than the 430, specially with the same symptoms.

cheers and good luck

I became interested in Amateur Radio in the late 50s. By the fall of
1961 I was up and running on 2m AM/CW. The equipment I used was a
homebrew transmitter running two 12AT7's to a single 832A. I probably
got about 10-15 watts output. I modulated it on AM with a EICO 72?
plate modulator and a JT-30 crystal microphone. I received with a
Ameco Nuvistor convertor (10 meter IF). This to a Hallicrafters SX-111
receiver. THe antenna was a 10 element yagi fed with 300 ohm twinlead,
stuck outside my second floor bedroom window (shack) and rotated
by 'Armstrong'.

I later graduated to a better antenna and added some six meter gear.
As I recall it was a Clegg 99er.

Generally SSB was not used until much later. I.E. the 70s possibly.
But I was gone to the military by then. So AM and CW was the only mode
used when I was on at first.

To answer the question; most VHF/UHF stations were homebrew and/or
modified military surplus. Like the SCR-522 transceiver. The receiver
sucked, so most just used the tx and made it work on two meters.

Surplus FT-243 crystals were used. And sometimes 're-ground' to change
the frequency. The common frequencies of 8 mc or 6 mc was the norm.
And there were a lot of surplus rocks around too.

Receiving was done with a low band receiver and a VHF/UHF Convertor.

Hope that helps.

Dan/W4NTI

That is almost like saying I just got my drivers license and what car
should I get or I want to get a new shirt.

YOu might mention what you plan on doing. Do you intend to remain at
the tech level or going to higher classes. Repeaters and FM only or SSB
and weak signal work, 6 meter work, 2 meter, 220 mhz , 440 mhz ?

Don't forget about the antenna(s) either. You can sink more in them and
the coax than some of the rigs.

Also you might give a price range.. Right now my vote would be for the
Icom MK2G as it has all the bands you are likely to use and all modes.
That rig is about $ 1000 now and you need a $ 150 or so power supply.
Then some antennas and coax.

Actually, the reason voice is widely used, and CW is not, is because people are used to voice, and are AFFRAID of learning CW.

I admit it. I use voice most of the time because I have to run 100% mobile, and any time I do CW I have to concentrate enough that I'd run myself off the road.

And then there's the power aspect. You don't need a kilowatt of juice to pump a CW signal through in most circumstances.

Plus, I've been there when the SunSpot cycle is at its flattest. CW is sometimes a god-send then.

My experience is about 5yrs older than Dan's but pretty similar. We ran converters ahead of an old HQ120 Hammarlund. 2 meter was an aircraft transmitter modified for the purpose and ran the ubiquitous 832. On six the xmtr was a Meck T60 modded beyond belief to play transverter for an old Central Electronics 10A. We were on sideband but had about 6 others to talk to. I got off about 1961 to do useful things -- like college.

As much as I love my TS-140S, I'd say look at the TS-50 instead. Its smaller in size. Easier to operate. Relatively cheaper unless you can find a used 140.

My father used an old TS-830 (my first radio from 78!) for awhile, but it was a bast#$% to tune. He finally went with a uniden President HR2600. Even though it was only 10 meters, it did the trick for what he wanted to show the elementary school kids.

Bes Wishes and 73,

Robert

338. Re: BC-72 Charger ---Cooked Well Done

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-07 17:36:00 UTC
From: Eddie Bryant N4UMJ <N4UMJ@carolina.rr.com>
Message-ID: <4mQt5.17412$gg.5279497@typhoon.southeast.rr.com>
Source record: 72414

-- I have a response for you on the problem with the BC-72 Charger and your repeated blown Voltage regulators on your ICOM 2SRA.
I had a W2a that worked flawlessly for about 7 years. That radio is very similar circuitry wise to the 2SRA you have. Then one morning talking on it on the way home from work the LCD slowly faded out and I thought the battery had died. Later on after charging the battery I found the W2a would still not operate. It was dead.
-- Checking the lithium back-up it was OK. Same for the BP-84 battery I had. Later on after probing into the radio I found the Voltage regulator output had just about shorted (~200 ohms to ground). Does this sound familiar. I put the radio aside and found another broke W2a on the newsgroups. 2nd mistake ! I bought it and the seller also threw in a ICOM BC-72 charger to boot. Sounds good huh !
--Upon receiving and checking the broken radio I determined it was indeed broke. Dead on arrival but expected. Upon checking the charger I found it had a bad burnt smell coming from it and upon disassembly found a badly charred PC board and many burnt and overheated components(resistors.) Also found several bad solder joints too. The components in the charger are not the small hard to handle surface mount parts but larger easier to desolder type. Read on for more problems with this charger before repairing .
--Another thing this charger does is wipe out my H.F. on the 80 meter band when it is charging a battery. Tried aluminum foil around the unit but it is being emitted from the battery pack as well. Inside the charger ICOM must have known that because the circuitry is contained within a shielded aluminum box. My MAHA charger for my Icom W32 gives no interference at all to my H.F. This does not present a problem if I charge my batteries when I don't have the HF on. I am going to seriously consider getting rid of this charger.
--I would discourage the further use of this charger at least with the transceiver being attached to the battery being charged. I think the death of many of the ICOM H.T. radios out their maybe due to this charger. This may or may not be true but I have a strong suspicion it is. Never really had a problem until I started quick charging my batteries with the transceiver attached to it. If this is not the problem I would suspect the voltage regulator is really underrated and very prone to failure judging what I have seen.
--As for the broken radio I received I suspect it died from the defective charger putting out a bad voltage source. I saved the parts from the radio (knobs,antenna,case,2meter & 440 modules etc.) and will retain them for future use with my remaining working 2SRA.
Hated to lose my W2a. It really was a good radio.
Anybody tried putting a 440MHz. module into a 2SRA and converting it to a 4SRA?

From: Bill Abate <wabate@erols.com>
Message-ID: <mssfrs0hkb7ribfdd9ek4emn6ui2k2qq3v@4ax.com>
Source record: 72422

An outstanding Henry 2KD-3 amplifier. Ruggedly built pair of 3-500Z's with PI-L output, 80 - 10M. With 150 watts of drive it delivers 1800 to 1900 watts out, key down not PEP! This is a desk top kilowatt with floor mounted power supply. The power supply is extra heavy duty. The plate transformer weighs 38 pounds itself! No series electrolytic capacitors, this supply has a 5 KV oil filled capacitor with choke input. Exceptional protection with a fused meter and over current relay in plate circuit. On the air now. The cosmetics are between an 8 and a 9. Very nice! 120 volts or 240.

I would rather not ship this amp because of the weight. I am located near Philadelphia. Asking $875 or will sell less finals for $775. I have jpg's.

73,

Bill, K3PGB

My VHF experience is limited to 2M.

My first station circa 1960 was a RX converter with a couple of 6J6 to a BC-342 and a modified SCR-522 transmitter.

Later the converter was replaced with the W2AZL design using cascode 417As. I built a transmitter using a ARRL design using a pair of 6360s, one tripler, one PA. I drove a p-p 829B final with that. The high voltage and modulation was "stolen" from my Heathkit DX-100.

In about '65, I converted the transmitter to a transmitting converter by making the final 6360 a high-level mixer, driving the cathodes with a Central Electronics 10A exciter on 20M. The PA was a single 4X150.

By the early 80's the station, including antenna and tower was entirely HB with GaAs FET preamp, 8877 PA, etc. A domestic upheaval put me QRT with 40 states confirmed as well WAC.

I'm slowly rebuilding in a new location and hope to finish the WAS one of these days.

Why do we keep beating on this?

There is nothing wrong with enjoying code and there should continue to be bands set aside for it, just like we have special seasons for those who hunt with bow and arrow.

OTOH, there is nothing magic about it either. Any advantage it may have can be easily realised by software and equipment that automatically generates code as typed on a keyboard. The main reason this isn't more popular is most code "experts" have such poor fists that machines cannot copy their transmissions.

Can't we simply leave code to those who enjoy it and move on?

mine did that... i found some references to the problem on the kenwood tech site... on the 2nd board down from the top (if i remember right) there is a little brass box containing the vco... inside that they sprayed some black stuff that was supposed to be insulation, however, over the years, it breaks down and becomes somewhat conductive... get it out! then there are a couple of resistors that need to be changed...

if i can find the info, i'll post it here...

seeya!

Can't be of help with your particular situation, but I have an Astron SS-30M. When grounded via the standard grounding plug and running on 115V, I have no RFI whatsoever and the supply is completely silent when the fan isn't running. In fact, my Astron RS-20M makes more audible noise after it's been on for 24 hours or so.

It requires an FCC license that will take years to procure (if any are available), or millions to buy, depending on your market. Even the so-called LPFM licenses have so many applicants, and so many technical requirements, that there are virtually none available in most populated areas. Not a single one is yet on the air. Operating without a license can get you fined, and the FCC routinely busts pirate stations, plus, it's sets a bad example for the kids.

Your best option is the Internet.

I didn't see the message that prompted this response and nominally I would not respond to such a crude title. But if you happened to be watching the World news in the last few weeks the last thing heard from the sailors in the Russian Submarine was tapped out on it's hull in morse code. NO maybe you may never find yourself in a sunken submarine about ready to drown... but someday maybe you will be trapped under a fallen road span after an earth quake or buried under rubble in the path of a tornado... and with no way to communicate except the tapping of a soda can.... Then let's see you say F*** morse code.... What a narrow mind. Larry WA9VRH

My experience has been very similar to Floyd's. It is very quiet and stable with no signs of RF hash. I have tested it with a load pile for voltage and ripple at 0,5,10,15,20,25 and 30 amp loads, and voltage never changed. Ripple increases slightly with load, but never over 50mv. The fan is very quiet, but I notice the click of the thermal switch. The fan will actually cycle off at times with a 30 amp constant load. Seems to be a well designed amazing little box.

My first rig was an old Harvey-Wells TBS-50D, ran an 807 in the final, 80 - 6 meters, including the 11 meter amateur band. Doubled in the final for 6.

Receiver was a homebrew converter (using 12AT7s as I recall) to a real prize -- Hammarlund HQ-129X.

In 1960, I built a dream rig: 12AT7's driving a 6360 driving pair of 6146s; used the audio section of the old Harvey-Wells as the modulator. Also had a converted 6-9 (or was it 7-9?) mhz Command/ARC-5 rig as the VFO. Receiver was a homebrew converter that used RCA Nuvistors in front end, mixer, and oscillator.

Later, built a 2-meter version of the same xmtr with an 832 in the final. Built a W2AZL converter -- which I still have today and which still holds its own.

The 6360 rig was built in a series in QST; the W2AZL converter was a mainstay in the Handbook for a long time.

The old HQ-129X made a fine IF for the converters.

AM was king for the longest time on 6 and 2, long after SSB had taken over HF.

Now I've done it -- got to head for the nearest hamfest and find me a HQ-129X.

I think the report of sailors tapping out morse code to the rescuers was a
bogus piece of info from the russians.
Probably morse code has outlived it's usefulness, I think it should simply
be considered another mode of operation in amateur radio and should not be a
qualification.

IMHO, a 2-meter HT is a good place to start. Most of them in the $150 - $200 range (new price) will have all the features you can figure out. Some folks recommend a mobile rig over an HT for the higher power and convenience of operating mobile without having to mess with antenna & power connections in the car, but I think that's a matter of personal preference. That said, even if you start out with an HT, you'll probably end up getting a mobile anyhow, but in my experience, the HT is much more convenient to play around with while you're sitting around the house figuring out what you're doing. I wouldn't spend too much on a first rig because until you actually own and use one for a reasonable amount of time, you really won't know what features are important to you. You'll be much smarter on your second purchase.

I would insist on a DTMF keypad for autopatch and tone encode for accessing repeaters that require tone (most of them do). These two features are standard on most new HT's. Most HT's will produce 1.5W or so with battery power and 5W with 12VDC input. This is reasonable for an HT and anything less will probably not be enough for you. The small 300~500 mW radios are OK for backups, but I wouldn't have one as my only radio.

I have owned Alinco (cheaper) and ICOM (better) and have been pleased with both. Let us know what you decide on.

Hope this helps,

Rodney

If you mean that they're afraid (one "f"), I don't think so, Robert.
The simple fact is that very few people have the time to devote to
learning code, or very few are willing to devote the time to learning code.

We live in a very busy world, with long work hours, chores, family
requirements, volunteer activities, an abundance of recreation
(television, computers, etc), and a nearly endless list of social
activities. Right or wrong, people today are simply choosing to spend
their time on other things instead of learning code. In other words,
they are not willing to take time away from those other activities to
learn code because they value those other activities more than they
value code.

So, unless the world suddenly slows down, or code increases in value
in the eyes of those people, that situation is not likely to change in
the future.

Don't read these newsgroups very often, do you, Larry? This topic has been discussed in length in the rec.radio.amateur.policy newsgroup. If you had read those discussions, you would have seen that the reports of sailers tapping code on the hull were wrong. It appears that this report was the result of someone's overactive imagination - later corrected by officials in Russia, and reported in several publications (links were given in the other newsgroup).

And even if you were trapped under a pile of rubble in a quake or tornado,
ANY type of tapping noise that could be heard would get you the help you
need. You could even beat out you own rendition of a favorite song... as
long as you could make SOME kind of noise...

Actually, most companies avoid the postal service because they face the possibility of mail fraud, and a host of other legal responses, if they "screw" a customer through the mail. With UPS (and other carriers), they don't face this threat - the poor customer is left to fight it out with the company alone (which is exactly how the companies like it).

It will never stay up, Paul. I tried this one time with a much
smaller antenna (20') and it did not last through the first wind storm
(and that was with a set of guy wires and cross braces much closer together).

Spread the legs at the base much wider (10' or so for the height
you're talking about) and you might have a chance. Also consider
crossed, or zigzagged patterned, cross braces.

I'm surprised no one has mentioned the very popular Gonset 2 and 6
meter AM transceivers. In the late 50's and 60's seems like everyone
had at least one. Gonset also made a 50-watt 6-meter (think it was
the G-50) with a VFO no less. It was a wonderful rig in its day.

> Jason Hsu, KB9PNZ

Your missing a number of generations of equipment.

Transceivers for HF weren't always around. Up until the late fifties,
an HF transceiver would have been an exception. It was separate transmitters
and receivers, and while some companies made both, it was far more common
to have a receiver made by one company, and the transmitter either home made,
or bought from another company. It was vastly different. If a transmitter
wasn't using crystal control, it sure wasn't using a VFO with a fancy
dial.

�nterestingly, VHF may have been a different matter. There was always
the split between casual use and DX'ing, and there tended to be a real
split in equipment between the two on VHF.

On VHF and UHF, the pattern from the early days was simple equipment,
very simple to begin, and then better equipment moved in either through
legislation (as standards improved, the regulation expecting stable
operation kept moving up in frequency) or because people wanted to go
further.

The earliest VHF equipment was on the level of superregenerative receivers
and modulated oscillators. The earliest transceivers were probably VHF,
because it was fairly simple to turn that superregen receiver into
a modulated oscillator, making the tube serve a dual purpose. I've
seen schematics for that sort of thing, but I have no idea how common
they were.

Modulated oscillators not only drifted, but they tended to put out a
fairly wideband signal (the method of modulation resulted in both AM
and FM). Of course, the superregenerative receivers had a wide bandwidth,
so they complemented each other.

Once crystal control arrived on a band (or people were pushing for
greater achievements), the equipment was much the same as used for
HF. The transmitters would have a few extra stages in order to multiply
the crystal controlled signal up to the needed band (and crystal control
was more common on VHF even after the VFO became common on HF, since

it required more effort to make a stable VFO for VHF work, and besides the crowding was less than at HF). The receiver, as others have pointed out was virtually always an HF receiver os some sort, with a converter ahead of it.

These transmitters, like their HF counterparts, would have been used for AM and CW.

The surplus from World War II helped a lot, not just in the way of transmitters (HF operaters also benefited from surplus), but I think of all those 8MHz crystals that were available in surplus which multiplied up to the VHF and UHF bands.

WWII surplus also brought equipment for the higher bands. A lot of people fooled around on 1296Mhz by using an APX/6, which had a superhet receiver (though very wideband) but a modulated oscillator. And there were similar simple surplus rigs for 420MHz.

Early to mid fifties, a new wave of transceivers became available for the VHF bands. These were relatively simple rigs, but with crystal controlled transmitters of 5 watts or so output. The receivers were usually superheterodyne, but in some cases they were still superregenerative. The superhets would have had relatively wide bandwidth, to accomadate the tuneable receive oscillators operatiing at a relatively high frequency that couldn't be made all that stable back then.

These simple rigs evolved somewhat, sometimes going to double conversion receivers and even making the transition to solid-state, but remained basically the same right up till the early seventies when FM became popular and the AM rigs vanished.

They were intended primarily for local use, but of course when the VHF bands opened up you could go quite far with this simple equipment. Most were AM only, and if they had a place to plug in a key, often they weren't well suited for CW; most did not have a means of receiving it.

As I mentioned, FM eventually took the place of AM for this level of mostly local operation. That transition was fueled by the availibility of FM transceivers made surplus from commercial operation due first to tightened up regulations and then the transition from tube to solid state/ These were crystal controlled on both transmit and receive, and yes, you needed a separate crystal for both transmit and receive, and for each channel, you needed a new pair. And with time, those surplus rigs became surplus, as FM rigs intended for ham use became available, and these were pretty much all solid-state. A bit later, synthesizers became available to do away with those crystals, and then with time they became standard.

The idea of SSB had been around for years, and while I seem to recall reading that some hams tried it early on, it must have been the early fifties when SSB use started to grow. The earliest ham SSB transmitters were home made, and they would have been stand alone transmitters.

Then commercially made SSB transmitters hit the ham market, and with time, SSB transceivers. It was SSB that made HF transceivers common, though for the first decade or so, matching SSB transmitters and receivers were made by various manufacturers.

I don't know when somebody first tried SSB on VHF. It's likely that it came almost as soon as a noise started being made about SSB on the HF bands, for the simple reason that hams wanted to try new things.

Either sombody bui[t a complete SSB transmitter for a VHF band (not ionconceivable considering the early SSB transmitters) or someone used some sort of converter to move an HF transmitter up into VHF, in the same way that receive converters were used to convert a VHF band down to a frequency receivable by an HF receiver. Some have pointed out converting an existing VHF transmitter into a transmitting converter, and I suspect that happened before specifically built transmitting converters. All you had to do waws change a stage into a mixer, pop in a new crystal, and retune things.

I've seen articles about VHF SSB in magazines from 1958 or so.

With time, commercially built transmitting converters became available. A company would sell a converter that matched their HF transceiver or transmitter/receiver pair. Collins made one to go with the S/Line (which itself came out in 58 or 59) in the early sixties.

And these commercial transmitting converters were available to the late seventies at least.

Meanwhile, there were even VHF SSB transceivers available from the early sixties. These were just like their HF equivalents, with a single VFO dial that controlled the frequency of both the transmitter and receiver, though covering only one band. Most of them were six meter rigs. The only two meter transceiver that comes to mind was a Gonset from the early sixties In design, they were all pretty much like an HF transceiver with built in transmit and receive converters. They even matched the HF rigs of the same manufactuers. And once you had a six meter SSB transceiver, the company would often sell a matching transverter to use it on two meters.

With time, early to mid seventies, as with the HF rigs, the US manufactuers disappeared and the Japanese rigs took over. They too had single band VHF transceivers that matched their HF rigs. Two meter and even 432 SSB transceivers started appearing in the mid-sixties.

But even at that point, transverters were still common, sometimes built, sometimes matching the transceiver, but my recollection is of a wave of transverters made by third parties.

It was only the mid-eighties, maybe even a bit later, that the multi-band VHF SSB rigs became available. And while there were a few cases where sxi meters was tacked onto an HF transceiver, it's only really recently that there have been those rigs that go from HF up.

So over the years, people built transmitters, both CW/AM and SSB, modified surplus equipment, modified HF equipment, built transverters, bought trasnmitters, bought trasnverters, and bought transceivers.

Greetings!

I have for sale or trade a Kenwood TS-830S in very good condition. Full output on all bands. Complete w/ original box and manual. Has YG-455C CW filter installed, and includes Kenwood MC-50 desk microphone. Want $650 shipped. Payment preferred via PayPal for immediate shipping. Will entertain any and all trade offers...? A good amp that would work with my IC-746? Would consider a trade for another IC-706...what have you got??? E-mail me!

Try some plastic polish from Antique Electronic Supply in Tempe Arizona.
They have a web page, just search for them via www.altavista.com. I've
used plastic polish many times to fix some pretty bad scratches.

387. FOR SALE - ALINCO DJ-S41T Handheld UHF

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-08 12:33:55 UTC
From: jcsarp@aol.com
Message-ID: <20000908083355.14371.00000198@ng-cq1.aol.com>
Source record: 72366

FOR SALE - ALINCO DJ-S41T handheld UHF amateur radio with extended receive and transmit coverage for the following bands:

Amateur 70 cm UHF Band ... plus FRS, GMRS, & UHF Business Band

This Alinco DJ-S41T (70 cm HT) is in MINT condition. It has only been used a few times and looks like brand new. It receives AND transmits from 421.300 MHz to 478.300 MHz with no gaps. ONLY the early versions of this radio are capable of receiving and transmitting below and above the 70 cm amateur (ham) band. This unit is an early version. It makes an excellent 70 cm amateur radio AND works great on the FRS (Family Radio Service) band located at 462 MHz and 467 MHz. This DJ-S41T also works very well on the GMRS Band and the UHF Business Band frequencies located between 450 MHz and 470 MHz. There are not many of these early units around.

The radio is for sale as a package deal with the following:

Early Version Alinco DJ-S41T in perfect condition
421.300 MHz to 478.300 MHz receive AND transmit
70 cm Ham Band, FRS, GMRS, UHF Business Band
1400 mAh NEXcell AA NiMH batteries (new)
Alinco EDC-78 optional battery charger (new)
Alinco ESC-27 optional soft carry case (new)
Belkin swivel clip (radio clips on your belt like a cell phone)
Original factory box
Owners manual

The NiMH batteries, Alinco battery charger, & the Alinco carry case are accessories that I paid extra for. THEY ARE INCLUDED IN THIS PACKAGE DEAL. (They are not included with the radio when you buy one new from a dealer.)

DJ-S41T SPECIFICATIONS

GENERAL
Channel Spacing: 5, 10, 12.5, 15, 20, 25KHz steps
Memory Channels: 20 Channels + 1 Call Channel Memory
Antenna Impedance: 50 Ohms Unbalance
Frequency Stability: +/-5 ppm
Microphone Input Impedance: 2K Ohms Nominal
Signal Type: F3E (FM)
Power Supply Requirements: 3.6V ~ 4.5V DC (4.5V standard with 3 AA batteries)
Current Consumption@4.5V: Transmitting: Approx. 260mA (High Power Receiving: Approx. 33mA Squelched)
Operating Temperature: -10 to +60 Degrees Celsius 14 to 140 Degrees Fahrenheit
Ground: Negative
Dimensions (Radio Only): 2-1/6(W) x 4(H) x 1-1/10(D) Inches

Weight: Approx. 6.5oz. (Batteries Included)
Sub Audible Tones Encoder Installed (50 Tones)

TRANSMITTER
Emission Mode F3E (FM)
Modulation System Variable Reactance FM
Max. Freq. Deviation +/- 5KHz
Spurious Emission -60dB Or Under Below Carrier Level
Tone Frequency 67.0 to 254.1Hz (50 Selections)
Microphone Electret Condenser
Operating Mode Simplex/Semi Duplex 5KHz Steps Minimum Between 0-15.995MHz
CTCSS Encoder Built-In And Included as standard

RECEIVER
Receiver System Super Heterodyne Dual Conversion
Sensitivity 12dB SINAD : Less Than -15dBu at 445.000MHz
Squelch Sensitivity Less Than -17dBu
Intermediate Frequency 1st IF: 23.05MHz; 2nd IF: 450KHz
Selectivity More Than +/- 7.5KHz at -6dB
Audio Output More Than 100mW @ 10% THD
Speaker Impedance 8 Ohms

Photo of DJ-S41T at: http://www.durhamradio.ca/djs41t.htm

PRICE - $100 plus shipping

Brian,

See the back of the FT-847 manual. The earliest rigs did not have the capability of reading information from the rig, so make certain you have a manual which has that as well. There is no other supplementary docs, unfortunately.

Thank you for your well reasoned post.
Fact is the "value" of code, and amateur radio, has diminished over the years. The ability to build a rig and communicate with people all over the world was extremely valuable when radio was new and a long distance call might cost a days pay but now we do all that over the internet with no investment in long hours of study or practice. It's as unreasonable to expect a person brought up on the internet to learn code as it is to demand that we homebrew all our transcievers. The Romans had a god "Dis Pater" (Father Time) who constantly created things then ate them. We became "appliance hams" and now "welfare hams". That's life ....

Try alt.radio.pirate

IMHO the FCC will not mess with a low power church project. They have
bigger fish to fry.

But, this does not change the fact that your operations may be illegal.

I helped install a transmitter at Biola University for their college
radio station. They had special permission but I don't remember the
specifics. This was on AM. Later they installed a FM station too.

Station call sign was KBBK. You can do a search on scholl radio stations.

Well, I can't say if it would work or not being I have never tried
something like that, but if it were me, I'd go get a metal push up mast
at radio shack or wherever and be done with it. They make a 36 ft
version, and rohn makes versions up to about 70 ft or so. MK

You don't want one of those things. Way too lossy. And according to what I hear even with the 80m hustler coil the hi power version is actually lossier than the low power coil due to design problems. For 160 use, I'd go with a bugcatcher of some kind with a large coil. Also beware of the likely corona effects on 160m if you run alot of power. I had a 80m super resonator that I mounted on a mast as a mobile antenna. I compared it with my normal homebrew "plastic bugcatcher". It was terrible. MK

Hi Michael,

I have the Alinco DJ-V5T and I like it fine. I would have to say go with the Yaesu though. The Alinco's advertising is misleading. They claim that the unit is capable of receiving wide coverage. Well, it does if you do a modification to it. Right out of the box this HT cannot even pick up NOAA weather radio.....just ham frequencies only. I've heard the mod is easy...just clipping a wire. I paid someone at Ham Comm here last June to do mine. This may or may not be important to you...just my 2 cents.

Good Luck with your search.

Dan,

I am really confused here.
You post an article in this newsgroup right?
For what reason, to get feedback from others?
If this is the reason, then why must you reply with such rude and
ignorant remarks. People and just throwing in their two cents, thats
it!! No need to reply to some of these people with those kind of
remarks, more less saying in most of your replies that they are stupid
and don't know what they are talking about.

Whats with that??????

If you don't like the responses you receive, then why waste your time
coming here every day to reply to them????

Give it up and move on.

Wayne

Source record: 72391

You CAN run 100millwatts on the AM broadcast band with
an antenna of no more than 3 meters in length. A properly
tuned antenna on the AM band using the 100mW limit can
be useable up to one mile when using a good gound system.

See my design for FCC part 15.219 legal AM broadcast antennas
at:

www.onr.com/user/ct/1610khz.htm

normal legal disclaimers apply...consult the FCC rules under
part 15 for more info.

415. Sonab police radio (Finnish) INFO NEEDED

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-09 00:02:55 UTC
From: Keith Wood <kw@bctv.com>
Message-ID: <39B97E2F.1DE35646@bctv.com>
Source record: 72392

I have a black, ruggedized HT of a type that I have never seen before. It is about the size of a Saber, appeares to be 160MHz or so, programmable.

On the face are white silkscreen markings: "Sonab" "POLIISI" and "POLIS" plus markings that are clearly descriptive of the buttons (6), lights (6), and the four knobs (two on each side, NOT on the front). The PTT is on the right side, below the knobs and about halfway down from the top of the radio to the bottom of the (removable) battery.

On the back is a a large foil sticker explaining operation (in Finnish).

What's left of the ID sticker is barely legible, and one can make out that is says "Made in Finland" "Sonab" and the S/N but not much else.

It came in a black leather belt case.

Can ANYONE help me get more information about this rig? I'm trying to decide whether to keep it, sell it to a collector, or swap it for something.

Thanks,
Keith

You might want to go into a company that stocks "Coleman" gas lanterns, look at their chimneys, buy one and take it to a professional glass cutter, who will cut and polish it to length. It's an old trick but a goodie! Helluva lot cheaper too!

Hi 950SDX owners,

Do any of you use the AF VBT while on CW ??? I tried using mine, but
all it does is muffle the audio. I've had 2 950SDX's, and they both acted the
same, so I don't think anything is wrong. What is this feature supposed to
do ?????

I think I saw an Icom control box, that mounts near the radio, so you
can control the Icom tuner WITHOUT it being connected to an Icom
radio. Without the control box, allowing you to control and power the
remote antenna tuner, there's no way to run it.

That's possibly true (depending where he is). When I built mine, I was in Washington State, so hot sunny days was not a huge problem. :-)

At the time, I needed a real portable tower - one that could be moved easily by one person about every two weeks (don't ask, long story). Plastic, because of the low weight, seemed like the perfect solution. Of course, I had concerns about sturdiness, but I was willing to give it a try. But, like I said in the previous message, it didn't survive the first strong wind storm (unlike sunlight, a common thing in WA).

In the end, we found our solution in one of those long, telescoping, aluminum poles used by commercial window washers. We found one just under 25 feet long (40' appears to be the longest available), and it turned out to be light, inexpensive, easily able to support a smaller antenna, and sturdy (stood up with minimal guy wires). I still have one in the back room for portable operations.

Jeff, you are able to operate a small radio station with limited output power and limited antenna height. Check with the web sites of companies who sell equipment such as this, for example...

http://www.ramseyelectronics.com/

In addition, your church may be able to apply for a special license, available to schools, chruches, and other organizations, to extend this range. You would have to check with the FCC's web site to learn more about this. Or perhaps Ramsey Electronics (at the web site above) could answer your questions.

I thought this thread had run it's course, but Oh, this one was just
too juicy to pass up... 8)

>Dan,
>
>I am really confused here.

At least you are honest.

>You post an article in this newsgroup right?

Yep.

>For what reason, to get feedback from others?

No, to voice an opinion and hopefully spark dialogue other then ,
"Mackey is a looser, etc." If spirirted dialogue in a free and open
exchange of ideas is feedback to you, then I change my answer to YES.

>If this is the reason, then why must you reply with such rude and
>ignorant remarks.

Was that a statement or a question?

I challenge you to give one example of where I was rude and ignorant,
since you apparently read and understood all my responses, this should
not be too hard.

> People and just throwing in their two cents, thats
>it!!

No problem with people's two cents.

>No need to reply to some of these people with those kind of
>remarks, more less saying in most of your replies that they are stupid
>and don't know what they are talking about.

Hmm, again, I challenge you to show examples of "those remarks". Show
me one example of where I called someone stupid. If I IMPLIED they
were stupid, thats different. As they say.."if the shoe fits..."
To the contrary, many who responded were quite rude to me for NO
reason, other then they did not agree with my position.

>Whats with that??????
>
With what?

>If you don't like the responses you receive, then why waste your time
>coming here every day to reply to them????
>
Actually, I love coming here every day and reviewing free speech at
work. I do not reply to "them", I reply where I deem necessary which
is my right.

>Give it up and move on.

Hello All,

I have an RF Concepts 2-417 2 meter amp that lost the pre-amp function.
Would anybody happen to have a schematic and/or manual that they could copy
or scan ? Will be glad to pay for the time and trouble.

Thanks and 73,

Dan - W6DKN

You can order service manuals and I assume user's manuals from Radio Shack. I would think you can probably get a new cord and/or connector from them also. I think they have a parts order line, but I don't know what the phone number is. You can probably ask at the store.

Rodney

I don't recall any 70cM radio that did NOT use an N connector. They are constant impedance unlike the UHF types. This begins to become important above 400 MHz or so.

Sounds like something shorted out. Open it up and see where the smoke came from. Put a new fuse in and see if you can waste another. Might just have been time for the fuse to go south, or it might be something more serious. Antrons are built well and don't often fail.

So? What's wrong with the average American using the spectrum for a
"personal communication service" when we all support this public resource
through taxes for the FCC, et al? The radio spectrum, including the HAM
bands belong to the public...not to just the chosen few who try to contain
it as a private "service."

Our society is reduced to "I saw it, I wanted it, I whined, I got it" and "I want it all right now without any extra effort on my part" - If the time ever comes where the satellite communications are gone - CW will still exist for communications - PS FWIW, The military still requires the learning of morse code - the only thing they stopped was the broadcasting of reports in CW.

These are 2 very good examples of you being rude and ignorant.
Don't bother posting a reply to this message because you are a lost
cause, and you're not worth my time! I unlike you, have better things to
do!

Wayne

>I guess I don't understand.

Hmmm, well, with a name like Rambo, I am not surprised.

>You say: "I thought a home run for the dealer, as this was an
automated
>sale, instant, no fuss, no muss, shoot it out and make a few bucks".

Meaning...they didn't have to talk to me on the phone, talk about the
radio, what it does,
how it works, and on and on, then take take all the info over the
phone.

>and then complain that you don't get the 'extra mile' service? what
about
>recognizing you were getting rock bottom prices because it was no
fuss, no
>muss, shoot it out ????
>
What is "extra mile" about having something shipped via USPS Priority
Mail? Explain.

>You want to pay the absolute lowest and then demand service the rest
of us
>pay for by buying retail.

OK, then Rambo...and you pay the absolute HIGHEST price for your stuff?
What in
heaven's name does having something shippied USPS have to do with
"services" you
get a retail? SHheeeesh.

>let me guess - you a Democrat!

Oh brother.....this person really is a moron.

>I think you SHOULD open up your own business and learn a little. Try
>selling at razor thin margins and find one or two assholes burn you
through
>a mail order sales scam (PO Box & next day Alert!!!!) can cripple

your cash
>flow.

Do you know what sarcasm is? Tongue in cheek?

>you want service, pay for it.
>
I offered to pay the additional costs necessary to have it shipped the
way I wanted, and
they refused.

>and, FWIW, I much prefer USPS priority too. It is a lot better than
UPS.
>

You don't say where you are located, here goes anyway!

I have a tower that is a bit nicer, here in Tallahassee FL:

89 ft US Towers TX489MDPL motorized crank up $2900. Includes the
mounting base and tiltover (installation) fixture. This is a substantial

tower. Check AES catalog or QST ads for details.

Retracts to about 22ft

Has recent cables and pulley sheaves. Includes rotor plate, mast and
thrust bearing.

All you will need to provide are 6 new 36" J bolts and a foundation.

Tower is mounted in place and is in great shape. Can demo on my site and

can be tilted over onto a 20-24 ft flatbed for removal. I can provide
assistance in removal.

Selling at considerable loss as I am contemplating a move and removal
will simplify the sale of the house. (unless of course you are looking
for a 3BR 2BA ranch with 2 car garage on 2 acres?)

You don't say where you are located and your e-mail does'nt work, here goes anyway!

I have a tower that is a bit nicer, here in Tallahassee FL:

89 ft US Towers TX489MDPL motorized crank up $2900. Includes the mounting base and tiltover (installation) fixture. This is a substantial

tower. Check AES catalog or QST ads for details.

Retracts to about 22ft

Has recent cables and pulley sheaves. Includes rotor plate, mast and thrust bearing.

All you will need to provide are 6 new 36" J bolts and a foundation.

Tower is mounted in place and is in great shape. Can demo on my site and

can be tilted over onto a 20-24 ft flatbed for removal. I can provide assistance in removal.

Selling at considerable loss as I am contemplating a move and removal will simplify the sale of the house. (unless of course you are looking for a 3BR 2BA ranch with 2 car garage on 2 acres?)

Which military would that be, Kevin? How many WPM do they require? For
which specialty tracks?

Last I heard, the only CW net on the USDOD roster was on ELF, and that
is computer-to-computer.

A friend of mine has a problem with his FT-2400H. The rig will not hold a frequency in memory. Can anyone tell me where the battery is that 'keeps the memory' when the power is turned off.

He has opened the rig and looked at the circuit cards, but the battery doesn't jump out at him.

Any and all sincere help would be greatly appreciated.

Thanks in advance.

Depends on what you want to achieve.

Either:
$2.98
OR
$2980.00!!!

What a nutty question!!! What do YOU think it's worth? Use that!

Mine literally caught fire! was gabbing on 2 meters when the car filled up with smoke. Yaesu made good on it. It seems that a voltage regulator shorted, placing full 12 volts on the entire radio. I was lucky I didn't lose the car as the self tapping screws that held the radio to the plastic ducting under the dash melted out of the dash and it fell on the floor. Yaesu was VERY VERY responsible about this. Just DO NOT under any case put this radio under the seat or in a glove box or anywhere else confined..... The plastic end pieces melted, the external speaker plug melted,the VHF final was burned beyond recognition. The plastic piece that holds the power cable in the case melted, the heavy black and red cables became bare. The factory fuse FINALLY blew by the time I got pulled off the road and over to the passenger side of the vehicle.Had to get a rag to remove the chassis from the car as it was melting the floormat (Nylon).....Kirk

The G-50 is still a great rig BUT there is very little AM activity anymore on 6 Meters. What little there is is centered around 50.4 and we sometimes have a group that meets on 50.550 MHz. My G-50 still works fine.

Greetings all,

Can a reverse polarity diode in an IC-706 short out without the polarities having been reversed? Which is the reverse polarity diode in the IC-706? The radio blows fuses the instant the leads are connected to a power source (even with the radio switched off). Is there anything else that could cause this to happen? Any assistance is greatly appreciated.

OUR Military - I am sorry that you are not in on the loop of exactly what types of communications modes are used. CW has been and will always be the backup mode for the DOD. When all else fails, and static fills the airways you can ALWAYS modulate the static for communication. And for the record, it's 22 WPM.

Irv,

If you take off the top panel of the rig, you should be able to clearly see the battery on the board inside as it is about the size of a nickel coin. If you don't see it there, it is quite possible that it is behind the LCD display unit. You will have to remove the front panel and also the LCD board, the battery should be located on the reverse side of the LCD board, mounted right behind the CPU. I have a Kenwood mobile, and this is where i found the backup battery for mine. Just another way of trying to get you to ship the rig to them so they can charge you an arm and a leg to replace a 5 dollar battery!

Regards, Wayne

From: pete4www@juno.com
Message-ID: <8pf3jn$cn6$1@nnrp1.deja.com>
Source record: 72277

Hi, I have an ICOM IC-746 and I just couldn't decide whether to use a vertical HF antenna or use an all band HF dipole, so I have decided to do both. I will use the GAP Titan DX, and maybe the Van Gorden All Bander that is sold for $29.95 I just have a few questions though. I am a new ham, so I don't know a heck of alot about dipoles, but is this All Bander antenna center fed, or is it fed at one end of it? Also, does the dipole have to run in a straight line because if I put this thing in my backyard, I would have to make two 90 degree bends to make it fit. Also, do I have to ground this antenna like I would the Titan DX? If you could please help answer these questions I would appreciate it. Thanks.

502. picofuse colour code?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-10 05:47:23 UTC
From: davem@cs.ubc.ca
Message-ID: <8pf79b$ql6$1@newcastle.cs.ubc.ca>
Source record: 72280
Cross-posted to: sci.electronics.components,rec.radio.amateur.equipment

I blew a fuse in a handheld transceiver. (Multimeter probe touching
two things at the same time - blah). The part seems to be a Picofuse -
it actually looks rather like a small resistor, but obviously isn't
because of how it behaved.

The problem is, I need to know what the rating of the old fuse is in
order to buy a new one. The old one has 4 colour bands painted on it,
just like a resistor, but current production Picofuses seem to have
their value printed directly on them using letters. Thus, I have been
unable to find a chart of the colour code used on the (probably obsolete)
colour-banded Picofuses.

The body of the fuse is green. Of the four bands painted on the fuse,
one is double the width of the other 3. I presume that this indicates
either the first or last band, but I don't know which. If the double-width
band is the first one, then the colour code is RED-RED-BLACK-ORANGE.
On the other hand, if the double-width band is supposed to be last, then
the colour code is actually ORANGE-BLACK-RED-RED.

This is a transceiver that probably draws 1-1.5 A during transmit,
so it's plausible that the fuse rating might be either 2.2 A or 3 A,
depending on which direction I read the colour code. But I'd rather
not guess.

If anyone can either point me at a Picofuse colour chart, or tell
me the value corresponding to the colour code above, that would be
great.

Thanks in advance,
Dave

Sorry, Ken, but CW has completely, or almost completely, disappeared in the military. No current communications MOS (job) training requires a knowledge of code (contrary to your claim above) and there is certainly no widespread use of code by military personnel.

By the way, a few people in this newsgroup have claimed that code is still used by special forces units, but this claim has not been verified by any reliable source (special forces units typically refuse to discuss training or operations).

I know I save these old catalogues for SOMETHING!

PICO II Fast Acting Fuses - Color code
4 bands....one band is a wide band.......Read from left to right with
the WIDE BAND on your right. Values are in MILLIAMPERES ....wide band
being red indicates FAST ACTING.

AMPERE FIRST BAND SECOND BAND MULTIPLIER
TIME-CURRENT
RATING CHARACTERISTIC
(Wide band)
1/16 blue red black red =
62mA
1/8 brown red brown red =
120mA
1/4 red green brown red =
250mA
3/8 orange violet brown red =
370mA
1/2 green black brown red =
500mA
3/4 violet green brown red =
750mA
1 brown black red red =
1000mA
you get the picture....same as resistor colors
1-1/2 brown green red red =
1500mA
10 brown black orange red =
10000mA

In the abbreviated catalogue I have - chart shows common fuse values as
above up
to and including 15Amps. Note.....the 12 and 15A fuses are rated at
32volts
whereas the smaller sizes are rated 125volts (in the cat I have).

As a ham who's been around awhile, I welcome your questions Jason, and likewise grimace at the one-upmanship of those who will be impatient! Short answer to your GOOD question is that the type N connector is a much more constant impedance (translates to lower loss...assuming its built with quality) connector than others such as the type UHF connector. We'll bring up, once again a little reminder that the UHF (nomenclature for one series of connector) never meant ultra high frequency (which "might" be the cause of your query) but was coined from the words UNION HIGH FREQUENCY. If you can picture that a connector must "look" the same as a piece of the transmission line it connects, and then examine a type N and a type UHF side by side you'll see that the type N maintains the concentric (coaxial) relationship much more reliably and indeed its attachment, if done correctly of course, is easier done to a predictable concentric quality (and impedance). Hope my explanation doesn't confuse you too bad.

Not quite true. Navy signalmen (the blinking lamp guys) still have to
know Morse, but radiomen (all branches) are no longer required to
know Morse.

DI = two
POLE = just what it says

Thus 2 poles and you feed it in the middle. My recollection is that there always used to be questions about dipoles on perhaps every exam except the novice exam. It used to be that this was something every Tech class licensee absolutely had to know to even pass the exam. I guess I'm out of touch! Do some reading in practically any reference manual/book or even exam books and I think you'll get some insight into this.

You CAN try some bends but be careful if you are running reasonable power as the ends are the highest voltage parts of the antenna and I know of one person at least who caught a palm tree on fire when a piece of the tree grew down and touched the end of his antenna. You SHOULD keep it straight if at all possible but if you have no other choice then you do what you have to. It'd be better to elevate the feed point as high as possible and let the ends droop if you can then keep each leg in a continuous straight run.

Ground the coax feed line at the entrance to the house or tuner or rig as appropriate. No ground of the antenna itself as with the base of a vertical and ground radials.

Verticals are generally poor may be poor for closer work and once in a while better for distance depending on how elevated it is. They are also susceptible to locally generated noise as much of it is vertically polarized. I had an 18HT HyTower for several years and would usually receive on a random length of wire better due to the high noise level. And that was with a ring of 10 ground rods and extremely good ground at the base of the antenna.

The dipole is directional with the strongest signals BROADSIDE so take that into account when you decide how to orient it. In Las Vegas I'd consider running it strung a slightly west of north to slightly east of south so it would have the best pattern into coastal CA a bit north of LA and into the east coast in the area just south of New England. However with dog legs in the antenna who knows how it'll radiate for sure? It's theoretical pattern when reasonably high and straight is like a figure 8 with the greatest signals off the sides.

Good luck and watch out for those power lines!!!!

519. "Old" Alpha amp service

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-10 14:41:42 UTC
From: Matt Erickson <kk5dr@hotmail.com>
Message-ID: <39BB9DA6.17DB51B2@hotmail.com>
Source record: 72297

Hi Alpha owners,
I offer my services in serviceing and minor repair, of "old" Alpha amps.
I only service the 76, 374, 78, 77, & 86
I DO NOT work on the 87A,89, 91B, & 99
My rate is $50 per hour, with a 2 hour minimum, + parts,& shipping.
I take the amp on a case by case basis. We must consult via e-mail before you ship the amp to me. I only work on one at a time.
I do modifications, updates, & upgrades.
Many of the mods are of my own design, or others like Richard L. Measures AG6K.
If you have trouble with an "old" Alpha, send me a message, I might be able to help YOU, fix it on line.
73 de Matt KK5DR (Amp builder, Alpha lover)

You have a classic problem with your 440. The rig has several VCO's in it, and these are "potted" to reduce microphonics from mechanical vibration. Problem is that on a few production runs Kenwood used a material to "pot" these VCO's that over time attcks the parts and cause the VCO's to act strange and ultimately fail. The long term fix is to dig out all the old potting material, replace all affected parts, re-pot the VCO's, and completely realign tha radio. This is not a project for the faint of heart. I had one that went back to a dealer service department 3 times in 2 months, and each time the tech would repair the latest systom and ship it back. I eventually used it as a trade for a different rig. I REALLY liked my 440 too. Good luck with your rig.

Hi,

Today a pickup a president Lincoln. It's works fine but only on the CB band (26 to 28). Its look that the 10m band is disabled!! There is a frequency shit 28.350 is 28.000 / 28.350 is 28.420 but only on the 10m band (I removed the frequency mod) Maybe I'm overlooking something???

Help!!!! Transceiver

Hans PB5KT

>it. Thanks.

The Van Gorden All Bander is a 134 foot long doublet, fed in the center
via 100 feet of 450 ohm balanced window line. (There's nothing magic
about these lengths, you can trim them if necessary.) You must have
a balanced tuner to match it to your rig's 50 ohm unbalanced output.
(I use either a MFJ 901 or a Dentron 3000A tuner depending on the power
level I'm running.)

The internal tuners available in some rigs won't do since they are designed
for unbalanced loads and generally don't have a large enough matching range
anyway. You can try using a 1:1 choke balun to let you use the internal autotuner
(if your rig has one), but you'll likely not be able to get a good match on all bands
this way. 40m will be particularly hard to match since the feedpoint impedance
will be quite high.

It works best if installed in a straight line, though you can mount it as an
inverted Vee (with the center higher than the ends). It will still "work"
if you bend the ends parallel to the ground, but not as well. If you have to
bend the ends to make it fit your lot, it will be better if you bend them in
the vertical plane, not the horizontal plane. There's nothing magic about
its length, however. You can shorten it to around 102 feet if necessary
to make it fit, and it will still work well. (In fact it may work better on 20m,
but worse on 30m.)

Normally I'd suggest just going to the electrical supply house to buy wire
to make a wire antenna. But the Van Gorden is actually reasonably priced
considering that it is nice heavy gauge flex copper with 100 feet of window
line included. You probably couldn't home construct it for less than $20.
If you can get the center higher than about 45 feet, it'll be a good performer.

I have mine mounted as a shallow inverted Vee with the center at about
45 feet and the ends at about 30 feet. It'd be better if the center were at
65 feet, but it works Ok at the lower height. If you can only get it 20 feet
or so in the air, it'll only be useful for high angle (a few hundred miles)

contacts. It'll "work" at longer distances, but not very well.

Since it, like all dipoles, is a balanced antenna, it needs no RF ground connection either at the feedpoint or at the rig. In other words, center fed antennas are inherently self-counterpoising. You may want a lightning protective ground, however. Use gas tubes at the point where the feedline reaches the Earth (install a ground rod there) to give you a lightning protective ground. Alternatively, just remember to disconnect the feedline and throw it out into the yard when a storm comes up.

OTOH, the Gap will need an excellent radial ground field if you expect it to work better than a light bulb dummy load. (It still won't be very efficient because of the Mickey Mouse wadded up coax it uses internally to "match" it. This acts mainly as a loss resistance, turning your hard won RF to heat.)

If you want a vertical, you'll be better off just going to the electrical supply house, buy some wire, and erect a about 90 foot total length inverted L over a radial ground field. The top hat loading provided by the inverted L will make it a more efficient antenna than the Gap. Much cheaper too. You will need a couple of trees, or a tree and the house, to act as supports. Run the vertical section as high as you can, then run the flattop off in any convenient direction. It doesn't contribute much to the field, it just serves as top hat loading for the vertical section. A friend of mine uses one of these that goes 50 feet up a tree then 40 feet over to another tree. It works well.

A base matching network consisting of a coil and capacitor will be required to match it to coax feed (ordinary L network). You can motor drive the capacitor, and/or use a stepper relay to switch taps on the coil to remote tune it. Or you can just walk out to the base and tune it manually. My friend went high buck and has a SGC tuner mounted at the base of his inverted L. Works great with 16 radials just laid on the ground with the grass growing up through them. If you are concerned that the radials may get caught by the mower, bury them shallowly (an inch will do fine) using an edger blade to make a trench.

Ideally, the radials for an all band vertical should be a quarterwave on the lowest frequency where you'll operate, IE 66 feet for 80m. But buried radials don't actually exhibit much of a resonance. Use whatever lengths your property will allow. You can use more than 16 radials, broadcasters use 120, but the benefit of more radials becomes a matter of diminishing returns past about 16, so there's little reason to get too carried away.

You are correct that no MOS or NEC (job) training requires a knowledge of
code, however comma, the requirement of code is still in place for personnel
in key communications positions. These positions are not listed in your
recruiting guides, but as I said , are used for backup communications in
case of total loss of electronics. I never said there was widespread use by
all military, just that CW will always be the DOD's backup. I checked with a
special communication SPECOM acquaintance and was assured that CW is alive
and well in the military. On a special note - in the movie "Independence
Day", after the aliens destroyed the communications satellites and the cell
phones and internet no longer worked, the long range communications were
handled with CW - This is still the universal language - I can still "talk"
to a ham in Botswana w/o any knowledge of his language, and he with me. Say
what you will, but the facts speak for themselves. Even the internet was
invented for the DOD for backup communications, but they still haven't
improved on the simple effectiveness of CW transmissions. - BTAR

I have a really nice Yaesu FT-5200 2m & 440 MHz Dualband Mobile Transceiver for auction. Everything is in fine condition! 50 watts high on 2 meters, and 35 watts high on 440 MHz. Has a built in duplexer, so only 1 antenna is necessary. It has a lot of nice features, and it is small & compact. It comes with YSK-1 Serparation Kit, Power Cord, DTMF Hand Mic, Mounting brackets, Manual, Schematics plus some other misc.

The price is nice and there is NO reserve!

Folks,
Are there any special tips for prolonging the life of a Lithium Ion battery? Any required maintenance like fully discharging once in awhile? I've heard that that they have no memory but I think I've seen chargers which have a "conditioning" mode which discharges them. But I could be confusing that with NiMH (which also should have no memory so go figure).

Any info would be appreciated

Bill - N2ASA

I bought this tuner hesitantly, and when I got it - Wow, what junk!

There was an "extra" machine nut floating around inside. While removing that, I found a piece of shielded cable flopping loose (up, into one of the var. caps where it lodged so that the cap would not turn), the antenna switch had a shaft-coupler that bound up against the frame of the same cap, there was no "flywheel weighted knob" on the roller inductor, just a direct-drive shaft from a plain plastic knob with a grea-drive to the turns-counter. This made it necessary to hold the (very lightweight!) case of the tuner while trying to "twirl" the knob quickly (160 or so turns takes a while to cover with a grab-and-twist-of-the-wrist).

None of the solder joints were properly wrapped, just soldered as they lay alongside whatever they were soldered to. This was most evident and alarming for the connection to the dummy load resistor!

Owing to the size of the caps and inductor, the box was way too deep to sit on the desk (I'd have to build out the work surface about 8" to make room). I notice all photos in catalogs (all brands) are shot so the depth is not apparent.

Realizing that I'm being a bit "picky" on the depth issue, are there any "good" tuners on the market? There are a few over $500, which seems like robbery, but do you have to spend that for decent quality? My understanding is that MFJ makes most brands anyway (including Ameritron and Vectronics, which were my first two choices initially, but they were out of stock)

thanks,

don

537. Motorola GP68 VHF hand held radio

Like new, Motorola GP68 VHF hand held radio. This is a consignment item. Owner bought it to use for fire department, but moved to an area using UHF. Radio has battery model PMNN4000C and rapid charger. Radio is in exelent shape and has only been used for a few hours. I can provide pictures upon request. Asking $400.00 OBO plus shipping to ContUSA.

Sorry son, I hate to burst your bubble, but there are many things in the military that do not appear on MOS codes - I don't know what military you were in or how high up in the organization, but my guess is you weren't very high up on the food chain. If you want to go on believing everything is black and white vote for the big "W" in the next election. PS - If you were the communications expert you seem to claim to be you would know what BTAR meant.

Hmmmmmmmm . . .

They don't train code for any MOS, but key positions require it . . ?

That sounds to me like there is a dwindling pool of people to fill those
key positions . . .

> These positions are not listed in your recruiting guides,

If they exist, they will still be on the MOS list, with a written set of
performance requirements. Please provide MOS numbers.

> but as I said , are used for backup communications in case of total loss of electronics.

How are you going to send and recieve CW without electronics?
Heliograph? Or maybe a chain of Navy ships will sit on stations across
the Pacific to flash light signals from San Francisco to Hawaii . . ?

> I never said there was widespread use by all military, just that CW will always be the
DOD's backup.

You might actually be right about this -- but you have completely failed
to prove your assertions.

> I checked with a special communication SPECOM acquaintance and was assured that CW is alive and well in the military.

Please provide his grade, MOS and unit for verification.

> On a special note - in the movie "Independence
> Day", after the aliens destroyed the communications satellites and the cell
> phones and internet no longer worked, the long range communications were
> handled with CW -

That movie was fiction. Starting with the little green guys and ending
with a president flying a fighter. I worked with the guys who wrote and
produced it (when they did "Universal Soldier"). They're great guys,
but neither of them has any military communications experience.

> This is still the universal language - I can still "talk" to a ham in Botswana w/o any knowledge of his language, and he with me.

I fail to see how "mbooga rajo shas xxonx" would make any more sense in
Morse than over phone . . .

As you may already know Matt, Alpha is closing their doors due to John leaving. They need a replacement tech if they plan on keeping the doors open. If you are "that good" then it wouldn't hurt to send Dick an e-mail.

It kills me that they are going to close their doors! I hope they find somebody.

Source record: 72333

I am looking for a good desk mic for my ICOM IC-735. I've heard lots of conflicting stories about what is a good mic and what is a bad mic for this rig (or any Icom for that matter.) What should I be looking for and look out for?

I want a good mic that does not require me to yell into it at "close range". I would also like it to be a good VOX mic. I'm thinking about getting a Heil or ICOM SM-20.

I also have an old Kenwood TS-700SP 2m all mode xcvr and have an old Astatic D104 into it. A friend told me it sounds like I'm talking into the back of the mic. Impedance mismatch or mic element going bad? The Kenwood MC-50 sounded just as bad.

One thing that has become faded from memory was the "correct" use of those good Q signals (I understand the Z sigs were mostly military as they weren't part of a merchant R/O's training, nor Amateur). The query QRZ? would receive the same reply regardless of language QRZ callsign. QRA? would receive the reply QRA name (of vessel etc). Of course if the person at the other end doesn't use 'em correctly - nothing will work (nor any computer system either). You could inquire QOD1? (Can you communicate with me in English for example) if plain language other than routine traffic passing was desired. Those darn Q sigs worked amazingly well.....I remember on 2 occasions working foreign merchant coast stations (we're talking late 1980's here) who could not speak any english in one case and limited in the other......no problem, call, reply, wait your turn is......go up to freq pair.....ready to receive.....what is your accounting authority....any more traffic.....2 telephone calls with numbers.....<next heard dialtone and calls to Canada>...back to morse....finished....1 more message.....received ok....no more traffic.....and then somehow we all seemed to understand cul or seeu and a couple o' dits.

There was lots of good stuff there never carried over to modern communications - I can hear the groaners lighting their complaining flames now.

556. FOR SALE - ALINCO DJ-S41T handheld UHF radio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 00:11:46 UTC
From: jcsarp@aol.com
Message-ID: <20000910201146.19672.00000654@ng-bg1.aol.com>
Source record: 72336

FOR SALE - ALINCO DJ-S41T handheld UHF amateur radio with extended receive and transmit coverage for the following bands:

Amateur 70 cm UHF Band ... plus FRS, GMRS, & UHF Business Band

This Alinco DJ-S41T (70 cm HT) is in MINT condition. It has only been used a few times and looks like brand new. It receives AND transmits from 421.300 MHz to 478.300 MHz with no gaps. ONLY the early versions of this radio are capable of receiving and transmitting below and above the 70 cm amateur (ham) band. This unit is an early version. It makes an excellent 70 cm amateur radio AND works great on the FRS (Family Radio Service) band located at 462 MHz and 467 MHz. This DJ-S41T also works very well on the GMRS Band and the UHF Business Band frequencies located between 450 MHz and 470 MHz. There are not many of these early units around.

The radio is for sale as a package deal with the following:

Early Version Alinco DJ-S41T in perfect condition
421.300 MHz to 478.300 MHz receive AND transmit
70 cm Ham Band, FRS, GMRS, UHF Business Band
1400 mAh NEXcell AA NiMH batteries (new)
Alinco EDC-78 optional battery charger (new)
Alinco ESC-27 optional soft carry case (new)
Belkin swivel clip (radio clips on your belt like a cell phone)
Original factory box
Owners manual

The NiMH batteries, Alinco battery charger, & the Alinco carry case are accessories that I paid extra for. THEY ARE INCLUDED IN THIS PACKAGE DEAL. (They are not included with the radio when you buy one new from a dealer.)

DJ-S41T SPECIFICATIONS

GENERAL
Channel Spacing: 5, 10, 12.5, 15, 20, 25KHz steps
Memory Channels: 20 Channels + 1 Call Channel Memory
Antenna Impedance: 50 Ohms Unbalance
Frequency Stability: +/-5 ppm
Microphone Input Impedance: 2K Ohms Nominal
Signal Type: F3E (FM)
Power Supply Requirements: 3.6V ~ 4.5V DC (4.5V standard with 3 AA batteries)
Current Consumption@4.5V: Transmitting: Approx. 260mA (High Power Receiving: Approx. 33mA Squelched)
Operating Temperature: -10 to +60 Degrees Celsius 14 to 140 Degrees Fahrenheit
Ground: Negative
Dimensions (Radio Only): 2-1/6(W) x 4(H) x 1-1/10(D) Inches

Weight: Approx. 6.5oz. (Batteries Included)
Sub Audible Tones Encoder Installed (50 Tones)

TRANSMITTER
Emission Mode F3E (FM)
Modulation System Variable Reactance FM
Max. Freq. Deviation +/- 5KHz
Spurious Emission -60dB Or Under Below Carrier Level
Tone Frequency 67.0 to 254.1Hz (50 Selections)
Microphone Electret Condenser
Operating Mode Simplex/Semi Duplex 5KHz Steps Minimum Between 0-15.995MHz
CTCSS Encoder Built-In And Included as standard

RECEIVER
Receiver System Super Heterodyne Dual Conversion
Sensitivity 12dB SINAD : Less Than -15dBu at 445.000MHz
Squelch Sensitivity Less Than -17dBu
Intermediate Frequency 1st IF: 23.05MHz; 2nd IF: 450KHz
Selectivity More Than +/- 7.5KHz at -6dB
Audio Output More Than 100mW @ 10% THD
Speaker Impedance 8 Ohms

I have for sale a Kenwood TS-830S that (WAS) in perfect operating condition, till I blew the finals...I won't go into the details, but in a nutshell I had a coax switch in the wrong position when I thought I was tuning the radio into a dummy load. Oops. Radio looks very good and receives very good, but now needs new finals. I had this package listed before at $675...my loss is your gain...first $400 gets it, payment via PayPal. Comes with Kenwood MC-50 desk mic in perfect working condition and looks good, too. Also, the TS-830S has the optional YG-455C CW filter installed. Again rig was performing FLAWLESSLY before my 'lid-like' mistake. E-mail me if interested.

Not according to the Navy's Communications Technology Branch, Kenn (the branch which sets Navy communications policy and procedures). When I contacted them a couple of years ago, a representative of their public affairs department was not aware of any code use in the Navy, nor was he able to find anyone in that facility that was aware of any code use. In other words, as far as he could tell, code was a thing of the past in the Navy.

I even asked about your notion of code used as a backup for regular communications. His response was that it would be a poor backup since nobody would know how to use it. However, he did state that there was probably reference material on most vessels that explained code, as well as material possibly available for most communications personnel, so it might be possible to use code as a last resort, but he was not aware of any set procedure for this.

As for the other branches, it appears to be the same situation - code has been eliminated. In the Army, for example, code was eliminated as a training requirement almost thirty-five years ago. I know this both from my experience as a radio operator in the Army (MOS 31M) and from recently talking to the education director at the Army's Signal School at Ft. Gordon.

So, contrary to your acquaintance's claim, CW is not "alive and well" in the military.

Sorry, "son," this sounds just like the standard "it's classified, so you wouldn't have heard of it" line used by people who Really Weren't There, whenever they are asked to provide any fixed details. The hostility to any request for details is also common from RWT's, a defense mechanism to jingle-jangle.

The fact is that, if it is officially there, it's in the book somewhere, someone's ERs depend on it, and it won't be a secret. If it isn't officially there, it's a HOBBY, not doctrine.

Your guess is wrong. I'm high enough in the food chain to be able to verify your information -- except for the minor detail that you haven't given any.

Your point is taken but if the answer to "QRZ?" is "mbooga rajo shas xxonx," the answer to "QRU?" is "mbooga rajo shas xxonx," and you give a 9-minute, 23-second explanation about your house, car, dog, kids and gallstone removal, then get "mbooga rajo shas xxonx" as a response, have you REALLY established communication . . ? ;)

Oh, come on, Thomas. Are you saying that you've never forgotten anything? Are you that perfect of a human being? I've read a lot of crap about radio over the last thirty years and I dare say I've forgotten far more than I remember.

Besides, when I got the FT-847, I was surprised to see the N-type connector there also. I had already purchased PL-259 connectors for the antennas (the UHF antenna had a SO-239 connector for a PL-259) and had to make a run to the store to get the other connector for the radio.

Just a little update on this - and hopefully someone can further refine the dates when morse was eliminated - I joined the US Navy in 1967 - and became a radioman (since my other options were either a 6 year commitment for communications technician or electronics technician, or become a hospital corpsman which they deperately needed in Vietnam). They had a morse code requirement which at the time had either been dropped to 16 WPM or dropped down from 16 WPM. Which, I cannot recall as I turned in one page of perfect copy at 40 WPM and was promptly dropped (passing, of course) from the class. In 1967 there was a code requirement but it was being phased out at that time. I heard a lot of complaints from radiomen that had their high - speed endorsement (which meant extra pay IF they used it in their job) who were NOT being utilized. At that time, teletype had pretty much taken over most of the traffic (electronic encryption being applied, naturally). I wish I knew when they dropped all requirements, but I can assure you that there WAS a requirement in 1967 which was in the process of being watered down, eventually to be phased out. Quite frankly, there are digital modes which can result in perfect copy in conditions that I doubt morse code could be copied (at least by a human) at any reasonable speed (say over 10 WPM - which is very slow). Hopefully, all of us can get beyond the realization that it is over - CW as a requirement is done - and get on with our lives.

> this rigs personality?

Well, Jason, that is a rather vague question, so I'll give a vague answer - I'm satisfied with this radio (VHF/UHF). And I know two people who use the radio everyday on HF and they're not aware of any "marginal" performance on HF (in other words, they're satisfied).

I can't think of a thing Yaesu could have done to make this radio better. I've heard that AM tx performance is poor on HF, but I've never tried it. AM not a commonly used mode in ham radio, but a friend tried it a while back. He said the audio output was weak, but improved after Yaesu adjusted something inside the radio (the VR1020 pot on the main board next to the big crystal filter).

The radio demands a decent RF ground and will act up if it doesn't get it. The manual warns about this and give guidence on how to accomplish it.

If you want to handle CW, I suggest that you add an extra filter. My HF friends seem to feel that the filters recommended by Yaesu are just about perfect for this radio.

Other than that, I can't think of a thing to worry about with this radio. It operates as advertised. It performs as expected. And it is a sweet radio to operate and use on a day in, day out, basis.

568. Need Recommendation for 2M Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 02:47:10 UTC
From: <>
Message-ID: <8phh3e$h81$1@pyrite.mv.net>
Source record: 72347

I am looking for a source of a reliable 2 meter amplifier that can output 150-200 watts with a maximum drive of 50 watts. I Purchased a Mirage 5016 and 5 minutes into it's life it failed the smoke test. I opened it up and found there were components hanging off the PC board. I returned the amp and picked up a replacement, removed bottom cover and visually inspected for loose components or shorts, hooked it up and monitored input drive power, output wattage and SWR and DC operating voltage. It worked with light duty this weekend till while holding a short CW QSO during a low horizon satellite pass It started smoking and failed. Being kind of burnt out (pun intended) on MFJ Mirage products I would really appreciate a recommendation on a reliable 2 meter amplifier.

Any help would be appreciated.

Feed line:would you run RG58A/U or LMR400 or better for UHF?, same with connectors lower loss and higher cost so use it! hi hi

Simple! Less RF loss much more RF tranfer to feedline than a PL-259 or SO-239 better shielding can't give more of a basic answer to your question

Hope this helps?

I have 5 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 module just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for each of them them. RF parts wants around $70.00 for the same.
I will sell them all for $200, this is the equivalent of getting one for free.

These are brand new never been used and still have the one inch leads on them. I have 4 of them in a sealed rack and one loose.

Thank You,

I had an IC-735 for many years and it worked fine with the HM-12 hand microphone as well as the SM-20 and the SM-6. Both the SM-20 and the 6 have an adjustable amplifier built in. If anything you need to be careful that you do not turn the level up too high.

> I also have an old Kenwood TS-700SP 2m all mode xcvr and have an old
> Astatic D104 into it. A friend told me it sounds like I'm talking into
> the back of the mic. Impedance mismatch or mic element going bad? The
> Kenwood MC-50 sounded just as bad.

The TS-700 is low impedance in the area of 600 ohms and the D-104 and MC-50 are high impedance (30,000 to 50,000 ohms) for use with the older tube type rigs.

I use an SM-20 or the Heil Pro-Set with my IC-781 and the SM-6 is on the IC-736. The D-104 or the Shure 444 are used on my KWM-2.

If I were you I would get the SM-6 or the SM-8 as they are a better buy for the money. The Heil is also a good buy and also beats the $220 price of the SM-20. Just my opinion even though I own the SM-20.

573. YAESU FL-2100B AMP QUESTION

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 03:38:35 UTC
From: YAESU AMP QUESTION <Test@hotmail.com>
Message-ID: <39BC53BB.1E880833@hotmail.com>
Source record: 72153

Question,

I have a Yaesu FL-2100B Amp, the matching amp to the FT-101. It is a 10-80 meter amp, no WARC bands.

CAN THIS AMP BE OPERATED ON WARC BANDS, 12 and 17 Meters, and if so what are the complications, what modifications do I need to do, etc. has anyone done this out there?

I know that most amps, such as the Ameritron 811's, the Ameritron 572, etc, only have non WARC bands on their switches, but have a 10/12, and 15/17 meter setting.... can I arrange this with the FL2100B??? How about retuning the tuned inputs to some happy medium between 15 and 17, for example.....

ANY ideas appreciated....

I have for sale a first class UHF repeater system. all equipment is rack mountable. It would probably cost too much to ship the rack. the system is as follows

Icom RP4020 repeater. no need for crystals. just use the dip switches and set it to your frquency. runs on 110 volt or 12 volt

Cat 1000 controller with digital voice recorder and rach mount enclosure can be programmed via phone line. with onboard modem

Motorola T1500 duplexers

pl encode decode it will do it all. this is a very nice system

I have over 4 thousand invested in this unit. let me know your best offer. we can split the shipping cost

this unit is on the air right now and working great. the only thing you will need is an antenna and coax.

They could have put an IF port on the back, and as I recall it's a little
short on
cross band repeat. I like mine. Go to a good search engine and you'll find a
great
BBS on the 847. 73 Bobby

How do you do a full CPU reset on an Eagle Spitfire 454? A friend has one which is hung in some strange state where it just makes a buzzing sound and none of the buttons work. It has had the channel expansion mod applied and was working OK, then locked up when he was cycling through the channels.

Thanks in advance,
Bill

Hello,

I own an FT1000MP, and I have a problem in CW: when I push the VOX button
and while the BK-IN switch is OFF the rig behaves like it would be in QSK,
I've checked the vox delay and it is fine in SSB but it does not work in CW.
Any info would be appreciate.

Best regards.

As we used to say...

"Dip the plate, peak the grid."

In the old days that was all you really needed to know.
For a 6146 rig like the DX-60 I would suspect the grid current should be
kept to 2 ma or below (in the "tune" position) and the plate current loaded
up to no more than 120 ma. While do do not have a DX-60, I regularly operate
an Eico 720, a Lafayette Starflight and an HW-16 and they all are the same.

Good luck!

None. If you want to sell it, sell it. Pick a price and post it here. If
you want to auction it, auction it and take what you get. This reserve
thing perverts the concept of an auction.

I believe one sold last year for $2500, but don't bet your life on it.
You can always start with a reserve of $3000.00 and see what happens. If
you don't get that, then you can always sell it to the highest bidder or
relist it with a smaller reserve.

592. TS-940S/AT Spurs?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 15:14:01 UTC
From: Gary McAdams <g.m.mcadams@worldnet.att.net>
Message-ID: <ZE6v5.3229$6i1.295352@bgtnsc04-news.ops.worldnet.att.net>
Source record: 72170

Hi all,

I've got a question for the equipment guru's out there.

I have a TS-940S/AT that appears to have some spurs when used on the ten meter band.
At least that is the tentative conclusion that I have reached. Possibly someone else may
have a better explanation.

A little background...

For some time, I have been using a converted 11 meter antenna on ten. SWR was ok, about
1.5:1 or so. I've used that antenna for years, with no problems. So this antenna becomes the
"known good" quantity.

I've been interested in installing other antennas here for some time, and to that end I purchased
a used Nye-Viking MB-V-A. A nice tuner for 10 through 160 meters. Just for the heck of it, I
used the tuner to flatten out the SWR on the vertical antenna. So far, so good. The SWR was
flattened and all was FB.

I then constructed and installed an eighty meter doublet antenna, fed with ladder line and a
4:1 balun. The tuner handled the matching duties on all bands, but there were interesting
things happening on ten meters.

The tuner would match the antenna with no problems when a steady carrier mode was used,
be it AM, FM or CW. Standing wave 1:1, no problem. Then when I went to SSB the SWR would
vary, running at times all the way to 2:1. This only occurred when on the doublet antenna, not
on the vertical, even if both were being fed through the tuner.

At first I thought that there was a problem with either the tuner or the doublet antenna. After a
bit of thought, I connected a different radio, a TS-120S, to the tuner. Now the antenna/tuner
combination works as expected. There is no variation in SWR in any mode after initial tune-up.

I have also noticed that, when using the 940, if I used the internal tuner in conjunction with the external
everything would be OK, just as it was with the 120. That kind of leaves me with the impression
that some kind of spur, is being generated internally in the 940, and only on ten. I'm thinking that
the internal tuner usage suppresses the spur and all is OK at the tuner. All reports on ten are that
the rig sounds fine, and no complaints so far about out-of-band signals.

Short of putting the rig on a spectrum analyzer, how can I verify this suspicion?

Thoughts?

Gary, WG7X

From: "Jack L. Owens" <jack@cx50194-a.dnpt1.occa.home.com>
Message-ID: <5a7v5.132832$3E6.1232246@news1.alsv1.occa.home.com>
Source record: 72172

Most interesting responses. I purchased the KWM-380 in the early '80s
for less than 2M. Collins Radio added 500+ in parts and labor for the
computer interface and rear fan and heat sink. I haven't used the unit
since 1985. I had no idea what it was worth on today's market until I
received some private emails.

According to Economics 101, it makes no difference what I want for it.
It's only worth whatever a willing buyer will pay for it and a willing
seller will agree to.

Thank you for your comments.

I am looking to upgrade my UHF repeater's tone panel which is an old
Ferritronics slot-card system. I was recently given the opportunity to
puchase a used CSI-32 tone panel but the owner could not tell me much about
it (it apparently doesn't come with a manual, either.)

I thought that CSI was Communications Specialists Inc but it is, in fact,
made by a company called
Communications Systems Inc.

Does anyone know about this panel (capabilities, etc) or could someone point
me in the general direction to get information about it?

Thanks.
J.

602. Yaesu FR-101 Main Tuning Know Needed

Newsgroup: rec.radio.amateur.equipment

604. WTB: small, HF / VFH multimode TNC

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 18:08:33 UTC
From: Carlos Portela <cportela@simple-sw.com>
Message-ID: <8pj6si$1416$1@news2atm.raleigh.ibm.com>
Source record: 72181

Hi All,

I am looking for a TNC that is small and capable. New or used. Price is not a big issue.

It must be able to handle HF and VHF an all or most modes.

If you have any suggestions or one for sale please let me know.

Thanks in advance.

Carlos

606. FT-840 and CW?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 19:08:27 UTC
From: John Harper <ae5x@qsl.net>
Message-ID: <39BD2DA2.EEC59578@qsl.net>
Source record: 72184

Hello,

I just bought an FT-840 and am wondering if there is any way to adjust the delay going from transmit back to receive when operating CW. From the time I send the last CW character, the rig takes about a full second for the relay to switch it back to receive - far too long when trying to work thru a pile-up or during contest QSOs. I can't find any mention of such an adjustment in the owner's manual.

Thanks and 73,

Please help!

Looking for an intact glass dial for a Hallicrafters S-107
general coverage receiver. The following link contains a
picture showing what this set is supposed to look like:

http://www.qsl.net/k5dh/s107.jpg

My first shortwave receiver was an S-107. I have a working
S-107 in my possession, in very good shape except that the
glass dial is gone (it was shattered into a zillion little
pieces by UPS, due to improper packing by the guy who sold
me the receiver - AARRGGHH!!).

612. Which test equipment for repairs?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-11 20:39:18 UTC
From: Brett - N7OLQ <brett.miller_nospam_@intel.com>
Message-ID: <8pjfs3$p8m@news.or.intel.com>
Source record: 72190

I'd like to get some equipment for general radio tune-up, testing and repair, but I'm unsure which route to go. I really only have a DMM and frequency counter right now. I was thinking about getting a O-scope (maybe 50 MHz), function generator (1GHz), but as I looked at signal generators they cost a lot and most don't go up very high in frequency. I was wondering if it would just be better to bet a used service monitor. I assume it will do the main scope functions and signal generator functions...

I don't know much about various models on the used market. Ebay has stuff from a few hundred to several thousand. It would be nice to get all the equipment without going much over $1000. This is for hobby use only.

Any suggestions?

Thanks

PS. Why do the different radios come with so much disabled?...
Is it to discourage non-hams from buying 'em as general-coverage scanners,
possibly?...
I'd sure think that most non-techy hams would be willing to pay more to have
the extra capabilities already enabled.

35 years ago would be 1965. I joined the army on June 13th, 1966 as a
radio
operator (MOS 05B). I spent 6 weeks at Ft Jackson, SC learning radio
prodedures, equipment operating, and CW to the required speed of 15
groups (based on groups of 5 random characters) per minute. Since I had
mastered the code that fast, I was sent to Ft Gordon, GA for 8 weeks to
be a Radio Teletype Operator (MOS 05C). We learned RTTY procedures,
more radio equipment (how many folks remember the old AN/GRC-26's or
GRC-46's), and had to maintain the code speed at 15 groups per minute or
better.

I went to Viet Nam in March of 1967 with the 53rd Signal Battalion. As
well
as the Radio teletype and voice nets, we maintained three CW nets. The
OM's
on those nets always slowed down to 15 GPM when a new OP hit the air,
but it wasn't long before we were cruising between 20 - 25 GPM. When I
made corporal in 1968, I had my first Skill Qualification Test and had

to test out at the 'slow' speed of 15 GPM.

Up until I changed MOS to 34H in 1980, I had to take that SQT every year and pass that test at 15 GPM. I still had the 05C4J2H MOS when I changed. I retired from the Army in 1988 and the 05C was still listed as my secondary MOS.

So my friend, I don't know whether the fellow you talked to had any historical knowledge of Army communications or not, but I was there when they wrote the book and I have my official papers to prove it. I didn't pay close attention to what happened to the radio MOS's after I transfered to 34H, but I know what happened prior to that.

My last assignment was with 7th Signal Cmd at Ft Ritchie, MD. I had an E6 and an E5 05C working for me and they both still had to take the SQT. As I was retiring, the Army did a massive consolidation of MOS qualifiers. The 05 MOS's were rolled up into the 31 skill sets and my 34H became a 29J. I can tell you that code was used far after "35 years ago".

Don't feel alone Dean. I heard a thump on my doorstep one day after eagerly awaiting the arrival of an older Sonar tube type transceiver. Upon going downstairs and opening the door I found a frail worn out box with the tape barely holding the top together. Postman no where to be found. I brought the box in and started unpacking it. I knew I was in trouble when all these little plastic pieces started hitting the floor. It was bits and pieces of the S-meter. Whether it was the improper packing or the drop on my concrete doorstep I will never know. Both did not help. I am sure there are other countless similar stories out there. Good luck on your search.

Jack:

A good condition KWM-380 with most of the options can bring a lot of $!
Check this web page:

http://www.landaircom.com/index.html

They buy and sell them, and somewhere on the page it says that they sell for up to $4,500! I suppose that's without a scratch, just tuned and tested by a pro, and with every option from the desk mic to the aux fans.

I have one that I use only on very rare occasions, and have though about letting it go, but every time I listen to how sweet a CW signal sounds on it compared to my TS-870 (which is a very fine rig), I change my mind!

Good Luck, es 73!

I have a Midland LMR 70-134B Two way that I use for my fire dept. use.It
also will work on 2m as well.
I hooked in the BNC connector to the external antenna,and then I use my
Alinco Headset with it.
I just left the earphone(3.5mm plug) unplugged.If I wanted to,I could hook
in a bigger speaker.Anyway,I use the headset to talk,and the radio's speaker
to listen.If the headset/mic has separate plugs,your problem is
solved.Also,with a headset,you don't have to hold the mic.just reach down to
hold the keying unit.If it gets noisy,just plug in the earphone on it.Mine
does great in the mobile although I do get stares from other drivers at the
traffic light wondering what is going on.

Don't know enough about the Navy to help (my dad was Navy early in his carrer, but switched to Air Force mid career). I know when I went to the Army's Signal School in the early 70's (from memory, March through May, I think), code was pretty much gone. At least is was gone in my MOS, and in the two MOS's of my room mates.

Anyway, assuming that all the branches dropped it at about the same time, it looks like it happened sometime in the very late 60's to very early 70's. So, I guess 30 years ago would be a better estimate.

I bought these from a man who got them from a auction of a radio shop.
They are 386 computers with the following directories: General
Electric, Kenwood, and M....(cant say the name) RSS installed on them.
I am asking $90.00 each for them. I bought 7 of them from him.

Thanks

Hummm, could be blown finals. But don't get me to lying...On many rigs
the finals are wired direct to power. If they short, it will blow the
fuse even when off. MK

Read all that again, Tony, and see if you can see the difference.
But, you are partly right about one thing, code was eliminated as a
training requirement about thirty years ago, not thirty-five.

By the way, I noticed that you switched from describing how you used
morse code in Vietnam during the late 60's to later talking about taking
a skill qualification test. When did you stop using code as part of
your job (not hobby use - actual military communications). I dare say
it was long before you got out of the Army in 1988. In fact, it was
probably not long after you left Vietnam in the late 60's.

> through the entire trip.

Someone (who shall remain nameless) recently sent me an email message complaining about the above sentence. He seemed to be "concerned" (actually he was outraged) that I would use the simplex calling frequency for "idle chatter." So, just in case anyone else has any doubts about this, I'll repeat what I said here.

I told this "gentleman" that the 2m simplex frequency is almost totally unused throughout much of the country, therefore it is highly unlikely we would interfere with anyone else. And, since we'll be busy driving, it is also likely that our conversations would be limited to short bursts of talk (are you still awake) that are also not likely to bother anyone. And, finally, I'm not an idiot - if anyone wants to use the frequency, we'll immediately move aside for that person (or even move to another frequency, if necessary).

However, I'd like to remain on the calling frequency in the hopes that others will hear us along the way and will cut in for a good conversation.

I hope that resolves any concerns.

You're right, Bobby. I'm sure we could all find something we'd like to see added. For example, I wish they had an option to have all four antenna outputs routed into one connector (like the 6m to HF option). I recently had a situation that required three of the antenna outputs into one antenna and had to run around to find a triplexer to do it with.

Perhaps you could clarify this option - is it full duplex cross band repeat
or only one way ? In reading the brochure and some of the reflector posts it
appears that it only goes one way. Even the picture in the manual implies
that it is one way...

Source record: 72140

Hi folks:

I have a venerable HeathKit HW-101 with power supply and an Astatic handheld mic.

The rig is in operable condition from 80 meters to 30 meters. I have used it recently (last week). It has been a great communications piece. It was modified at one point for AM and the mods are still in place. All one needs is a mike amp of sufficient power.

I want to start building my own stuff again. Besides which, my grandkids are taking up a lot of my time now. I now only have time to catch bits and snatches of the BBC any more.

What is the rig worth these days?

For Sale:

Perth "OutRunner" 10M-160M mobile antenna, I don't think it's ever been used. $275.00

Kenwood TM-733A dual band mobile, with remote mounting bracket. Very good condition, just back from AVVID for repair/alignment (turned out there was a problem in the mic cord and not the radio). $325.00

Kenwood TR-751A 2M All mode. Good condition. Up/Dn buttons on mic do not work (suspect cable again). $300.

Peter W. Dahl Plate xformer, 1250V @ 1.5A CCS - This is a large xformer and would really prefer someone within a couple of hours driving from Burlington, VT. $225.

LDG DWM-4 Digital Wattmeter with HF/QRP and VHF/UHF sensors. $90.00

MFJ-101 24hr Digital Clock. $20.00

Ten-Tec 1208 2M to 6M Transverter (needs final alignment, I don't have a 6M source). $70.00

Prices do not include shipping. E-mail direct if interested.

I have the original IC-706 but I can't believe that the Accessory Socket connections are any different. Look in your manual for the ACC connections. On mine, pin 11, MOD, is the audio input and pin 12, AF, is audio output.

Good luck. Last spring, while travelling to Florida with the family, I tried to start conversations on both simplex and repeater for two straight days, both going and returning. I got nothing. My family is still making fun of me. 2m SSB has always been crowded in comparison.

I hope you find someone to talk to.

Hi,
I have a Yaesu FT-1500 radio that has what has been refered to as "the standard T-type power connector". Does anyone know what the brand and part number is for these connectors? I've looked thru the Molex and AIM websites but I haven't seen anything that looks like them. They are male and female and are configured like this T

Thanks, Gary N2UM

688. Heathkit HW-101 Possibly to sell

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-12 20:25:28 UTC
From: Curtis Scholl <cscholl@izzy.net>
Message-ID: <T7wv5.3061$O5.62605@news.itd.umich.edu>
Source record: 72064

Hi folks:

This is a second send. I have made some inclusions and a couple of changes to cover a goof.

I have a venerable HeathKit HW-101 with power supply and an Astatic handheld mic (that needs a mod from a "stereo" Tip Ring Seat connector).

The rig is in operable condition from 80 meters to 10 meters. (I messed up the last message saying it had 80 through 30 meters....doh!) I have used it recently (last week). It has been a great communications piece. It was modified at one point for AM and the mods are still in place. All one needs is a separate amplifier of sufficient power. The mods do not affect the performance on any of the bands.

The rig has a power switch on the right hand side of the case near the top. It is a push button on, push off with the attendant new hole in the case. I guess the last owner couldn't find a replacement for the audio gain control and used whatever he could.

I want to start building my own stuff again. Besides which, my grandkids are taking up a lot of my time now. I now only have time to catch bits and snatches of the BBC on the DX-390 any more.

What is the rig worth these days?

Since it has no memory, disconnect power, with the power switch on for about
10 minutes.

This will drain all capacitors in the radio.

692. TM-D700 Front end troubles and poor x-band repeat audio performance

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-12 21:56:52 UTC
From: Len <umina@theuminas.com>
Message-ID: <8pm8s1avc1@bob.news.rcn.net>
Source record: 72070

A friend of mine and I have purchased Kenwood TM-D700 transcievers and we're having a terrible time with the front ends. These radios are almost useless in even a modest RF environment. W1CCE's intent was to replace his FT-8100 at home with the Kenwood to get packet performance, however the once fine RF environment of his home now sounds like a paging reciever site.

The overload performance of my radio is identical, and I get intermod even living many miles further away. The manual offers "AIP" mode for interference, but this hardly helps at all.

The other problem is repeat audio. Apparently Kenwood pulled the audio from the wrong place to do cross band repeat, and the result is such basey audio that it's almost unintelligable (unlike ICOM and Yaesu) both of whom do it right.

While these radios are great for APRS transmitting and for monitoring the Packet Cluster (which is at the other end of the band) they have proven to be very poor performers for general mobile use in and around the Boston area.

If you live near a city or a paging site, and are contemplating the purchase of this radio because it has APRS and/or Packet capability, you would do well to wait until ICOM or Yaesu introduce their versions. Both companies are much better at VHF receiver design than Kenwood.

We've attempted to get some support from Kenwood via their website with no response and we're currently planning to take up the issue with the advertising dept at QST. Our feeling is that the radio does not meet it's specifications for performance (ala the front end issues) and that advertising cross band repeat as a feature means that it must actually work the way cross band repeat is commonly understood to work (that is with the deemphasis properly handled in this mode.

If anyone else owns a TM-D700 and is having similar troubles please drop me an email at K1LU@ARRL.NET .

73,
Len

Please tell this gentleman something for me...

He's an ass.

He either has his head in the sand, or never has left his
own little area!

New England, for example. Are you aware that there are
THREE simplex frequencies? Yep, JUST THREE between
146-147MHz. Seems the 'repeater co-ordinators' years
ago took their job to heart. They co-ordinated repeaters!
Totally without regard to simplex use. But then, that was
their job, to co-ordinate repeaters. To be fair, they had
the mandate, and people were screaming for repeaters...

And there still are people out there with rigs that won't
go below 146. Hey, I have an Icom22 that won't! Sure,
I also have an Alinco dualbander, and HTX-242, and others,
but I do still have that ICOM...

So, next time someone tells you to 'move off' 52, fine, do it.
IF you can. Or IF 52 is busy being used for calling. But
it's so empty 99% of the time, USE IT!! Let people know
there IS someone out there that might hear them, that might
come back to them, and not to be a little 52 cop to kick
them off!

I've driven 'cross country' many times. TX to New England.
Around Florida and Georgia. And California and Oregon.
I've used 52 more than anything else, it's where you FIND
people, and 99% of the time, it's where you stay.

What an ass...

Mike

Sorry, I should have stated that - it's one way.

I have a Yaesu VX-5 handie-talkie that can receive my club repeater just fine from anywhere in the house / yard, but the stock duck antenna at 5W doesn't always allow me to get into the machine cleanly. After checking to make sure the 70cm simplex frequency I've selected is not in use, I set my VX-5 to receive on the 2m repeater's frequency and transmit 300mw on 70cm to the FT-847 (satellite mode enables cross-band feature). The 847 is normally only running at 5 watts, but has the advantage of an outdoor antenna that tops out at about 50 feet. This configuration works well and allows me to keep in communication when going outside to check the weather (SkyWarn), heading to the fridge for a cold drink, etc.

At what point does SWR get so high that it begins to pose a threat to your equipment? I do not have a tuner on my HF rig (still looking for one, or parts to build one), and on 75m for example, SWR is about 1.3:1 on 3.850, but by the time I reach somewhere in the neighborhood of about 3.950 I am up around 3:1. The antenna is an inverted V. Any ideas?

Thanks in advance

John

Anything below 1.5:1 is normal. It is generally excepted that anything
over a 3:1 SWR at the rig, is not good. If the SWR is cause by your
antenna not having the needed SWR bandwidth, then just put a tuner in
line, or you can cut a new set of wires for you dipole, at the desired
freq, and attach it to the same feed point, this should let you cover
your favorite freqs, with out using the tuner.

FOR SALE

Hallicrafters S-76 receiver:
1) As part of an estate e.g. we're just handing the
deal. Therefore, untested but looks OK.
2) Original black paint
3) With repo manual (I think I saw one at the
club that would go with it)
4) Has all tubes
5) All knobs
6) Good cosmetic condx (needs cleaning as been
in storage)
7) All controls work (none binding, frozen, etc)
8) No rust, dents, scratches, etc.
9) Original AC cord.

Price $190 or best reasonable offer plus shipping
costs. We can "probably" find a box locally and if
so, can come up with bubblewrap, styrofoam, etc
and pack it at no additional cost.

>Bad Dude.

Sorry, princess, but that *is* the difference. Theft implies that the owner no longer has physical possession of his/her property.

The constitution allows congress to enact copyright laws for authors "to promote the progress of science and useful arts." *Not* to protect the profits of corporate entities or of any other special interest group.

Some hacker from Norway has been posting code that allows the viewing of DVD videos on Linux systems. The makers of DVD disks rigged them to only be viewed on Windows systems, and are suing anyone who spreads the word about this code, including a guy who even printed the code on a T-shirt! It turns out that when you buy a DVD, you're not buying the DVD, but only a license to use it.

People are fed up with this crap, and they're rebelling. It's not about to stop anytime soon.

My days of driving are long past... Unless it;s on the Gold
Wing... But when I 'get' somewhere, I usually take the 202
along and play on 52. And while I wouldn't say it's 'busy',
it's far from empty.

Here in New England, we are QUITE full up with repeaters.
I used to always tell people "down 15" if we made contact
on 52. But guess what? Hit another repeater! I don't
from where I live, but just west of here there was a BIG
stink over that. Seems someone has an old rock bound
rig from the 60's, and he STILL was using it, and just
REFUSED to stop using 146.505 for simplx. Last I heard
the 'club' out at the NY border was offering him a new
rig at club expense.

I don't know, I sympathize with the club. But on the other
hand, it's sorta principle, you know? And you have to ask
would the HAM radio world come to an end if there was
a limit to the 2M repeater proliferation? I'm not saying
kick them out, but as slots open, how about 'clearing up'
simplex area!

We have several just in my local-ish area (Saugus, MA). I have five
that I can reach with just an HT: Danvers, Salem (both NSRA
repeaters), Gloucester (CAARA), Waltham (WARA), Boston (BARC) (all
MA.)

I stayed on 146.52 (with an Icom 706 MK II) last year on a trip to SC
(relatives) and will do so again this year. However, I heard only a
couple of operators somewhere in NY talking about a local hamfest.

For the bulk of the 2000-plus mile trip I heard nothing, nor was I
able to raise anyone, on 52.

Try this link:

< http://www.halcyon.com/amreg/ >

This may be my experience *only* but each time I have tried the
software from that link it has wiped-out everything already programmed
into the MkII.

It does place a very pretty image of the rig on the screen, though :)

You know, I own several licensed copies of Vertex RSS products. Why? Because they were priced at a REASONABLE level. If Motorola doesn't want their RSS "shared" between two parties then they shouldn't force us to get out the Vaseline everytime we buy a licensed copy.

I'm sure when you have a Saber, you'll call up Motorola and buy that legal copy of RSS too. We can all sleep better now, thank you.

I need a copy of the manual for a Force 12 EF 320X240S I just picked up in a used tower, and got the Force 12 as part of the buy. Anyone who has this antenna care to zerox a copy of the manual for me? I will send a self addressed stamped envelope. I also would consider selling the antenna, if anyone is interested.

From: Joe Leikhim <jleikhim@nettally.com>
Message-ID: <39C03F9F.21606297@nettally.com>
Source record: 71983

Motorola once made an 800 MHz radio (Mostar/Traxar) line that used SO239 connectors. Prior to that, all the Motorola UHF models all had PL259's. The rationale was that the installers were more familiar with PL259's than type N. (Cost was probably a bigger issue). The antenna kit shipped with a PL259 connector with Teflon dielectric. Unfortunately, in the real world, installers were not doing to good a job with PL259's and they didn't get any better with radios at 800 MHz. The later model radios came out with mini-pl connectors, which are constant impedance connectors. The antenna kit had the male connectors permanently installed.

Myself, I'd just use the ground connection that is on the power plugs.
The gear will be grounded just from plugging it in. MK

John, at 3 to 1 swr you are dropping about 25% of you power. I think that anything under 3 to 1 will not hurt your equipment in an intermittent mode like ssb, but might warm it up if you are using cw or fm or digital modes that keep it keyed up for long periods of time.
Just my opinion.

I have for sale a TS-440S (no tuner). This radio is about a 7-8 out of ten (some minor scratches). Go to www.HamContact.Com/gear/ts-440s.jpg for pictures and check it out. I will take $495.

Please call 714-901-0573 or reply directly as I do not always get a chance to monitor the NG's. Excellent references available from well known sources.

(Also, why not check out the article written about our POWER STATION on p.67 of October, 2000 QST)

Message-ID: <87Av5.3917$KZ1.258432@paloalto-snr1.gtei.net>
Source record: 72085

A little funny tale.

I had a Kenwood TS440 at the time and spent a lot of time on 160m. I was using a shunt fed 65' tower and it worked great. It was tuned at 1.845 and had about a 25-30 kc bandwidth of less than 3-1.

I got home late one evening and my wife was on 160m yakking away. I looked and she was at 1.925 as best I remember. I told her in a concerned voice that the SWR had to be off the scale and the radio was in full shutdown to protect the finals, she couldn't have been putting our over 20w.

She turned around and said "I'm 40 over in Kansas". I said OK and walked off didn't figure there was a comment I could make.

Didn't hurt the radio a bit. I guess I'm lucky but you can't argue with success.

```
FS: (3) Drake Twins each of the three consist of:
T4XC Transmitter
R-4C Reciever
MS-4 Speaker
AC-4 Power Supply
each of the three sets are a 8.5
comes with manuals or manual copies
power cords, no mics (Owner Ran Shure Mics Wont Part With)
These are a sweet deal for a collector. No D.O.A.'s
$275.00ea + S&H
n4jzh@knology.net
73 Donnie
```

Depends on the rig. Some of the modern sets specify less than 2:1.
Some of the older tube stuff doesn't really care as they are adjustable
over a wide range but most of them are rated around 4:1 or so.

To get more than about 200 khz on 80 meters with a low swr you will
normally need a tuner for the modern sets unless they have a built in
tuner and I think many of them are only good for about 3 or 4 to 1.

Why not just come out and ask if anyone's interested in committing a crime..
stealing something.. robbing a company.. or.....
I'm sure the hardware's also a bit expensive too, so why are you not asking
if anyone's willing to help you shoplift it? They could probably get out
the door with one while you were paying for yours, and then you could split
the cost on that too..
Do you not steal EVERYTHING *only* because you'd get caught?
Maybe I'll call 'em up and let 'em know what you're planning on doing so
they can send you only half the software...

Lets just hold on just a minuet. If the party of the first part and
the party of the second part decide to enter into a limited
partnership and the limited partnership owns the software.
But you can only run it on one machine at a time.

Back off a little on the sanctimonious bullsh*t. Motorola
has screwed more people in the two way business than
a hooker with a pager.

And if you really want to know motorola has a lot of
software and modified software floating around.
ever hear the term "Lab Software".

At the moment with 3 differant suitcase programmers
and a PC to run their crappy software you still do not
have all you need to do the programable radios.

Just My Opinion..

Bob

Anyone in Utah with a Saber, who wants to split the cost on RSS software?

I will be buying a RIB and building the right cable, but $350 for software that only I will use is a bit steep. If someone(s) would like to split the cost on the software, it won't hurt so much.

There's no crime involved here. Go buy a clue, Sherlock.

Motorola sells the RSS software to just about any person, persons or corporation in the US who will sign the license. I'm looking for people who want to co-invest and become co-owners of a legal copy of the software.

Didn't see any responses that bring out this point:

The liklihood of damage is a factor of both the magnitude of the SWR *and* the power level in the system. If you are running 5 watts of QRP with the usual 100-watt rig, then you are unlikely to damage anything at any SWR, including both open and short circuits at the antenna connector.

On the other hand, if you are running full power or an amplifier into an antenna tuner, etc., then depending upon the power level an SWR of 3:1 might cause damage to some components of the tuner, etc.

If I remember correctly, the maximum voltage across a transmission line with a particular SWR is sq-rt<SWR> times the voltage level associated with an SWR of 1:1. So, with a 3:1 SWR you are subjecting the line and other components to a voltage about 1.73 times higher than if the SWR were 1:1.

A significant mismatch condition in the antenna system that might result in an SWR of, say, 16:1 (this is *not* an atypical value with open-wire or ladderline feeders, for example) then everything associated with the system where that SWR prevails may be subjected to voltage *and* current levels 4 times higher than in the flat line (1:1) situation.

For 100 watts in 50-ohm coax with SWR 1:1, the peak r-f voltage is 70.7 volts. With SWR = 16:1, the peak voltage is 283 volts. "Where" on the line and in the system that maximum voltage appears depends upon frequency, antenna load, transmission line length, etc. SWR only tells us the ratio of magnitude of the maximum voltage to the magnitude of the minimim voltage, not where on the line they occur. Remember that maximum currents are inflated by the same factor.

So, to answer your question, one must consider both the SWR and the level of power involved and how the equipment in question is designed and constructed. For the typical 100-watt transceiver, the internal antenna tuners usually cannot deal with load SWR greater than 3:1. Attempting to run full power into higher load SWR situations is highly likely to damage the relatively delicate components in the internal tuner. Such tuners are typically NOT implemented with the same rugged components that you would find in an external antenna tuner. This is usually the result of a compromise with the space available in the transceiver cabinet. Such damage almost always requires a visit to the shop or factory to replace the expensive damaged components.

RIB = Radio Interface Box, i.e., the connection between the computer that runs the software and the radio to be programmed. You can't do anything with the software without the RIB, you can't do anything with the RIB without the software.

About five months ago, we traveled from Washington to South Carolina (mom lives here), through California (her mom lives there). Like you, I found the 2m simplex frequency to be totally dead for a good portion of that distance. But, we didn't really use the radio much along the highway and really only tried it occasionally during extended breaks at rest areas.

However, we did have nice conversations with a couple of people along the way. Once in Arizona, when a trucker was trying to see if anyone was on the frequency at about the same time we were trying it. We had a good conversation about how few people were on the simplex frequency.

The other time was in Texas, with a guy who claimed he actually monitored the simplex frequency on a regular basis (a rare individual indeed). Anyway, he overheard our conversation about stopping for the night, and headed us off to a hotel with a nearby restaurant that stayed open late. We talked with him several times during that evening, and the next morning when we pulled out.

Anyway, next trip (coming real soon), we plan to actually have the radios in the car ready to use all the time (which is why I started this thread). Perhaps we'll get lucky along the way and actually hear someone to talk to occasionally.

We'll be heading for the midwest, somewhere between Springfield (MO) and Indianapolis (IN) - yep, more family. Maybe I'll post our travel schedule in this newsgroup so people who live along the route can listen for us.

Good grief, how many repeaters do you have up there? We have six in this area and I thought we were doing just fine. Okay, I'll admit that this is a relatively small town setting (okay, its the hicks). But in the Seattle area (a good size population), there are only about fifteen or sixteen repeaters, and those repeaters are able to handle the load.

So, you people must be a bunch of "rachet-jaws" up there (to borrow a old CB phrase). Sounds to me like some of those people need to get off the repeaters and start using the simplex frequencies more often.

Of course, with only three simplex frequencies between 146 and 147 MHz, that cannot be much fun either. You're right - the co-ordinators really got into their job and seriously co-ordinated repeaters. I feel for you, man (where have I heard that before).

> I've driven 'cross country' many times. TX to New England.

Next time you head this way, let me know and I'll listen for you. Of course, like I said in another message, it had better be in the next couple of months - I don't plan to be here much longer than that. By the way, "here" is Myrtle Beach, along the coast in the north-east corner of SC, not too far from I-95.

Why do people do that kind of crap? Don't these people have anything better to do with their lives? To me, it seems so silly, useless, and mean-spirited. I actually pity these people - what a sad existence.

Has 8 15 foot arms, 2 cubex spiders, 8 foot X 3" boom, boom-to-mast plate with stainless steel hardware. Sealed tuning capacitors (homebrew). All you need is wire. $175 for everything.

The 15 foot arms cannot be broken down so this thing can't be shipped, but I will deliver within a certain distance. I'm located aproximately 70 miles NW Washington DC or 65 miles west of Baltimore, MD. The instructions and measurements for the quad are in the ARRL handbook -- 1995 or later. Their design is for a five band quad, but I just made the 10-15-20 elements.

Remove any additional puctuation from the address to reply.

TS-520S tranceiver with VFO-520 remote vfo, digital display (not DG-5), and desk mike (Yeasu YD-148). The whole package for $375 + shiping.

The transceiver is electronically sound and puts out at least 100 watts on all bands. Cosmetically, some scratches, none disfiguring. I don't know X of 10 as those values have been made meaningless. I have the Operator manual and Service manual for the TS-520S and the Operator Manual for the VFO-520. A spare set of finals are available, however the ones in the rig only have about 10 - 15 hours on them. All cables are available for the remote vfo and display.

Remove any additional punctuation in the address to reply.

ALINCO DJ-580T handheld---$175

Dual band, receives both 2 meters and 440 MHz simultaneously
Covers AM (RX) from 108-130 MHz and FM (TX/RX) from 130-170 MHz and 415-470 MHz
Will also receive from 810.000-998.9875 MHz

Comes with antenna, handstrap, instruction manual, and schematic diagram
Comes with EDC-24 tabletop drop-in charger
Has EBP-28N, 12 VDC at 700 mah battery (NICAD) to give 5 watts output power
Also will give you the ESC-17 soft case (for a shorter battery than the EBP-28N).
Original box included. Will double box for shipment.

Very clean with no dents or scratches. Some wear on the ALINCO logo but key pads are clear and fine.

Asking only $175 including shipping to your door.

Yep, bad practice, but actually the quoting's enough to prevent the code
from running. AV programs will still detect it as the virus though due
to the suspect text strings in it being recognised.

No, dummy. Perhaps you could ask some 12-year-old to get out the
dictionary and read you the definition of the word "partnership."

Motorola's license agreement permits use by partnerships, and for any
number of radios.

If you really had any "experience with Motorola," you would have known
that.

Hmmm, at 2 watts out, simplex, the range may not be that great.

Might be an okay deal for the truckers, though, talking short range on
the highway.

I predict a whole rash of requests -- how can I "open up" the
frequency range of my 151 mhz cb dealie so I can get on 2 meter
repeaters? :-)

Hey Rick....

I would like to respond to your post as I am a brand new ham....

Most have taken their HTs to a real ham to have them
> programed because they dont understand OFFSETS or PL TONES... Hey Im sick
of people with the mind set..

** Isn't that what is called an "ELMER"?

I just got my first radio, an FT-1500M and I am not embarassed to say I
didn't have a clue about PL tones, Offsets and thing like that, I didn't
have an "Elmer" to show me how to run my rig, set-up the PL tones of
offsets. The only reason I new anything about SWR's and antenna adjustment
is from my CB expereance.

>Hank Why dont you go to CB where you should be and your kind >hang out..
People like you are why most 12th grade students cant >read or locate
America on a world map..

*Well, I believe you can blame that whole thing on this countries messed up
school system. There isn't anything you can do about it either....
Bush or Gore are not going to help it...they just do what they are PAID to.

The reason the HAM test became easier is because the HAM population was
dying off. No new blood was coming in and the HAM's were disappearing, one
by one.
I am a HAM under the new test rules and lisence plan, so does that make me
less of a HAM RADIO OPERATOR than you?

nope.

CB is trashed, there is no doubt about that, but the FCC has given up on it,
so what are you going to do?

I am not sorry for becoming a HAM under the new test rules, and if you think
I am a lesser Amateur Radio Operator than you "Old Test" hams, so be it. I
will not lose a second of sleep over your opintion, nor will it stop me from
keying up and doing a little ragchewing on the local repeaters tonight.

Get over it, you can't change it. I am sorry you feel this way., but I am
still proud to be a Amateur Radio Operator.

My guess is no IMHO for the high power ones. Most high power 2m amplifiers used fixed tuned band pass matching networks, either lumped element or stripline, with moderate to high Q's. To rework one of these requires you know what you are doing, that is if it is even feasible.

Now low power, 20 to 50 watts is another matter. You can buy a relativity wide band VHF hybrid power modules cheap. Basically all you need is a PC board to mount the thing on with a COR circuit, heat sink, connectors, and a box. No tricky matching circuits, and board layouts, required for the transistors. The ARRL handbook has the design for one in it all ready! Just buy a module to cover the band you want, and wham, your done.

These low power amplifiers are the kind I expect to see spring up all over the Internet for sale, and at Ham/CB radio flea markets. I guess the FCC can change the part 97 rules so you can't buy more than one power module a year, and you have to provide your license to the vendor when you do buy one.

Va. Code ï¿½ 1-13.19. Person. The word "person" shall include any individual, corporation, partnership, association, company, business, trust, joint venture or other legal entity.

So, if an individual can own a license, so can a partnership or simply a joint venture.

A typical Grant of License reads "This license agreement permits you to use one copy of the programs included in this package on a single computer. The software is "in use" on a computer when it is loaded into temporary memory (e.g. RAM) or installed into permanent memory (e.g., hard disk, CDROM or other device) of that computer. ... (goes on to discuss network licensing)." This implys that it is completely legal for two or more individuals to buy a software package jointly and a: each use it on as single computer or b: on seperate computers so long as it was "in use" (as defined above) on only one computer at a time (i.e., each partner could have a copy of the software on a floppy so long as only one of them put it "in use" at a time.

I agree, but for a different reason. FCC came down on 10m RF Amplifiers because the CBrs useing the were interfering with other services and most particularly with the TV broadcast service, which generated an avalanche of complaints to congress as well as the commission. Moreover, the most serious offenders were using the amplifiers to "talk DX". That is unlikely to happen on VHF because there is less incentive (no DX) to operate at very much more than legal power and far less chance of TVI.

My fear is that a taste of VHF FM will create a clamor for more channels at a time when the ham population is shrinking. How much political pressure would it take to get FCC to turn over the 2m band to this new service a bit at a time? After all, we could still use it ... :o(

I have for sale a matched pair of Svetlana 4cx800a tubes. These tubes are Soviet military surplus, and are very rugged well made tubes. These tubes are in great shape, they have NEVER BEEN USED. These tubes will produce as much wattage as any Svetlana 4cx800a sold by any tube distributor, period. The tubes do have a 90 day warranty.
The price on the matched pair of 4cx800a tubes is $200.00 plus shipping.
The price on the 4cx400a tubes is $90.00 each plus shipping.
I also have the SK1A sockets for the 4cx800a tubes. The price on the sockets is $39.95 ea. plus shipping.
Thanks for your time.

The ideal grounding system is probably a full-blown Faraday cage - the halo is sort of a compromise on the ideal.

My faith lies ("lays"?) with the "ground window" where you route all the cables through a nice, solid copper panel that is VERY well grounded. Direct hits will probably kill your equipment no matter what you do - its the surge and ground-loop V-drops that you can realistically protect the hardware against.

Not necessarily. I got mine used.

I don't have a problem with Ma Batwings making money on their software.
I just wish that they sold it for a reasonable price. If it were under
$100 (from THEM, not from a bootlegger), I would have no compliant
whatsoever. As it is, I find it hard to pay $350 for software which I
will use maybe a dozen times, all told.

I am also considering buying the software and doing programming for,
say, half the price of other local providers.

Listen to all of this paranoia!

I read about these frequencies going into a non-licensed state a couple of weeks to a month ago.

Basically, the reason for de-licensing of these radios is simple:

You can buy these "McDonalds-Band" radios every where - and many people have done just that - and have ignored any licensing on them - these are the so-called VHF Itenerant Frequencies - mainly used as job-site radios, and drive-thru-windows comms.

Since the FCC cannot enforce the literally thousands of unlicensed users on 154.570 and others, they simple move it to Part 95.

I seriously doubt we'll see an influx of truckers running high power, trying to shoot tropo-scatter on these frequencies. Things will stay exactly as it is - only now, the users of the itenerant channels will no longer feel "guilty" about operating here without license.

796. Dead TS-940SAT, Need Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-14 00:00:00 UTC
From: Carl Sherman <csherman@flash.net>
Message-ID: <39C14D22.FF899C4D@flash.net>
Source record: 71917

To My Ham Friends,

Request your help and guidance. Multiple heads are better than one!!

My Kenwood HF Transceiver TS-940SAT crashed and burned. Well, burned, anyway. Took it to Avvid in Irving, Texas, and after three weeks, their diagnosis was that the "Final Unit" (a board that contains the output transistors) had burned beyond repair. The second half of the problems is that Avvid says Kenwood does not support the TS-940 anymore and the Final Unit board is not available through Kenwood.

Now for the suggestions:

Does anyone know of any "aftermarket" sources for boards like this?

Is there anyone out there who repairs ham rigs below the board level?

This was originally a $2000+ rig--now worth about half that, if operational. The last new ones were marketed about 1990. I purchased mine new in November 1990, and it was one of the last two new ones in Dallas at the time (a late serial number).

Is there anyone who needs a TS-940 for parts (other than the Final Unit)?

If I can't get it repaired, do you have a suggestion for what I should purchase as a replacement in the $1,200 to $2,000 range, and why.

Thought I would never need another HF rig, but what do I know? Any ideas you have would certainly be appreciated. Wouldn't even make me mad if you said I should have bought an Icom!

Thanks and 73,
Carl Sherman W5SBH

Thanks to everyone who provided me with information re the Kenwood
TS-440 problem. I'm sending it off to a service center for repairs. Now
that I have some idea of what the problem might be I realize that it
requires more expertise than I have in order to repair it.

* * * C A U T I O N * * *

RE: SELLER "MULTICOMM2000" (Martyn Allison)

Dear Buyer:

I will try to be brief.
I was a bidder on Martyn's "Yupiteru MVT-9000 MKII" back in early June. I was not the final bidder. However, thru e-mail Martyn told me he was going to England in a week and was bringing back 12 more.

Long-story-short….
On June 13, 2000 -- $473.93 was charged to my Visa acct. to "Multicom2000 Ltd." Huntingdon, GB (which I later learned is Martyn's company in England - which he is closing).
web address: http://www.multicomm2000.com/page2.html

He said he would ship item upon his return (3 weeks).
It is now 3 MONTHS latter… No item…. No more e-mails… No nothing…'till now.
Martyn has suddenly posted 101 items on e-bay. When I e-mailed him that I was writing this note to his bidders I finally got a response.
Basically: …Hold off for a week… he'll look into it.
By that time, you will have sent your money. Good luck.

Moral…
Be very very careful - especially with large amounts.
Use an escrow service if possible.
Above all: Proceed at your own risk!

Finally…
I'd be happy to answer any questions or forward any e-mails I have had with Mr. Allison.
E-bay and these newsgroups are a great marketplace ….Don't get burned. I did.

Hope this may help someone.

Sincerely,
Paul Cecchini
Chicago, IL

Source record: 71922

This is one of the best replies that I have seen in a long time on grounding.

I would like to point out one important point. For every person that you ask the question to, you will get at least 2 more answers. Never could figure out where the extra answers came from, but they have always been there.

Lak made some very good points. I would like to correct one of them. He said that the use of " NO- OX " would insure a low resistance connection. All that the grease will do, is to help reduce the oxidation and corrosion of the connection. The low resistance comes from a good tight connection.

Another area of importance is the outside ground system. Yes I did say system. You can not get a low resistance ground system with only one ground rod. Several ground rods all connected together all form part of the grounding system.

The spacing between the ground rods is some what in debate. Most people recommend spacing them twice their length apart. This means if you use 8 foot ground rods, you plant them 16 feet apart. The spacing comes from what most people consider the cone of influence.

If you plant the ground rods too close together, the cone of influence will overlap with each other. What this translates into, is that when they over lap, you don't get the maximum use out of the soil. You start wasting your money.

Another way of looking at this, is the soil can only absorb so much of a lightning charge at any point in time. If you can spread this high current over a greater surface area, you can dissipate the charge better. This is why most of the communication sites have a ground ring around the tower and shelter. The better engineered systems will also have several runs that spoke out and away from the tower.

Just remember, the more copper and ground rods you put in the ground, the higher the cost will be. Some place between damaged equipment and going broke is the magic point of enough of a grounding system.

Hope this may help answer your question. to some extent. I have been building communications sites for some 35 years. Have seen many ways that numerous companies use. They all have their good points and some could stand some improvements.

Saw a brand new shelter come in today, that was specked out by another company. Found several areas that should be looked at. They had loops in the wires going to the power surge protector. The halo down lead ground wires are cut short inside the shelter. You are going to have to splice them inside the shelter to get to the outside grounding system. The surge protector is wired to the main power company feed coming into the shelter. What I haven't told you is that

there is a manual power transfer switch. What this means, is that if you go to an alternate power source, it will not have the surge protector connected. It is still connected to the power company side of the transfer switch. It's little things like this that should be changed.

Have fun grounding your ham shack.

Hi All,
I have for sale a GE master II uhf mobile radio that had been converted (Duplexed) into a repeater.
This unit does not have the pa board since it smoked but can be repaired if you solder in another PA to it.
Included is the TS-32 tone board (cost me $59) and the ICOMS for the 444.825/449.825 band split.
Possibly the existing board could be fixed.?
I will take $75 plus shipping......

>John, at 3 to 1 swr you are dropping about 25% of you power.

How do you come up with that number? I didn't see a mention of the particular rig John is using, so I'm wondering how you know how much it may be folding back with a 3:1 VSWR. Some rigs may fold back as much as 50% at that VSWR, others may not fold back at all.

VSWR doesn't in itself cause any power loss other than some extra copper losses on the line due to circulating currents. With a lossy coax feedline, that can sometimes be significant, but that depends on the loss of the particular cable and its length. Again that's something that John didn't give us.

On some bands, the VSWR on my feeder exceeds 16:1, but losses are negligible because I'm using a low loss transmission line (ladder line). Someone using a long run of RG58 at that VSWR would see comparatively huge losses.

>
>What should I do??

There isn't any common failure mode for a transformer that will cause
hum in the output of this sort of supply.

The most likely culprits are the filter capacitors. Likely they have deteriorated
after being in storage for a long time. Aluminum electrolytics tend to go bad if
they sit for a long time with no voltage on them. Note, it is possible that they
may reform after being on for a while (few days), but if they don't, they have
to be replaced.

To check the capacitors, first see if they feel significantly warm to the
touch (warmer than the rest of the supply) after the supply has been on
for a while. If they do, then they're leaky and you have to replace them.

You can also take them out of circuit and measure them with the multimeter.
(If it is a new fangled digital meter with a capacitance range, use that.) Otherwise
check them on the 10X ohms setting by reading them one way to let them charge,
note the rate the needle moves (a rapid charge means that they have little capacity),
then reverse the meter leads and notice the "kick" of the needle. A strong kick is an
indication that the capacitors still have some capacity to store charge. A weak or
non-existent kick means they're bad.

The other possibility is a failed diode in the rectifier bridge. That will cause
hum too, but 60 Hz rather than 120 Hz, so you should be able to hear the
difference in the radio. The meter can be used to check the diodes too, of
course. Each diode (out of circuit) should read high ohms in one direction
and low ohms in the other.

I didn't infer any lightning protection in that method. He didn't ask
about that. He asked the how to ground his gear. I consider lightning
protection a whole different issue. The antenna lead in should be
suppressed or grounded outside the shack during bad wx. You can have all
that fancy ground gear and still have damage if the antenna is
unsuppressed or any other wires leading into the shack are unsuppressed.
Also you want to direct the bulk of the strike to ground at the antenna,
not anywhere near the shack. The bulkhead at the shack should only be
needed for clean up of any leftover cureents. I've had a direct strike
on a mast 15 ft away from me, and nothing I had plugged in had any
damage at all. In fact, I had no damage whatsoever to anything except a
blown out piece of tape that covered the top of my mast for rain. It
blew a neat dime sized hole through the tape. But anyway, to get back to
his problem, if he is not worried about lightning protection, or plans
to ground out the feedlines during non use periods, the power grounds
are just fine. The onlt reason for using those grounds are for shock

protection. Period. I don't advocate an "RF" ground anymore. I consider them as "folklore" being as assumming the antenna design is proper , no rf ground is needed in the shack. The rf ground will be at the antenna if one is needed. If using a "complete" antenna such as the dipole, etc, no rf ground is needed at all. I have a hunch this was the type ground system he had in mind. And thats the main reason I advocate just the power ground. Lightning protection for the antenna system a whole different and totally unrelated issue. To me anyway...g I consider each seperate systems doing different jobs. MK

What are you going to do about desense on the older radio? Everytime
you transmit on the main radio, you're going to pretty much kill the
receive of the old radio (nothing but the strongest signals are going to
get through unless you are a long distance away on the frequency dial).

Are you going to try to filter that out, locate antennas some distance
apart, or just live with the desense and only listen for signals between transmissions?

Just curious? I'm thinking about doing something similar, and I think
I'll just live with the desense.

From: lak <lak@radio.land.com>
Message-ID: <#SbMN2jHAHA.326@cpmsnbbsa09>
Source record: 72036

The ideal grounding system for any radio station is the HALO system used by commercial / military sites. In cellular sites (my employment right now) we use #6 AWG copper wire strung around the ceiling perimeter of the room with #2 AWG copper wire connections at the four corners to an outside grounding grid.

The equipment is connected to the HALO system via Y cables i.e. cable made from 1 long and 1 short piece of #6 AWG wire. The Y end connects to the perimeter HALO while the single end of the long piece connects to the equipment frame. The purpose for this Y configuration is to allow for current branching due to a Lighting strike.

The HALO ground and Y cables are connected together with C-TAPs and grease called NO-OX to insure low resistance connection points.

The outdoor grounding grid is composed of several 8 foot copper rods that are connected together with #2 AWG copper wire that has been "CALD WELD" together. The reason for not using compression clamp (C-TAPs and the standard screw type) is due to outside weather causing high resistance nodes. The antenna system should be ground directly outside to the grid along with the four corner ground cables.

An electrician who performs work for a local Cellular or PCS carrier could provide you with information on the HALO system, CALD WELD and C-TAPS. C TAPS are made by Thomas & Betts 800-888-0211 and others as well. They need to be crimped on a special tool that applies enough pressure to close them for a proper connection.

This is not a cheap system but, it does dissipate most direct and near hit lighting strikes effectively.

This system is usually too expensive for the average Ham station, at the minimum drive a single 8 foot copper ground rod. Ground your antenna system directly to the rod, along with your shack main ground. Buy an copper grounding plate (I have seen them advertised in QST and CQ in a small ad) to connect each individual piece of equipment to. Ground the plate to the rod via at least a #10 copper wire to the grounding rod. Use plenty of NO-OX and good compression clamps made for outdoor use. Go to a good electrical supply for the material not your local hardware store, as they deal with National Electric Code compliant work every day.

BTW do not follow the advice of the other answer and just use the grounding system of the house AC. This is good way to blow up a lot of electrical appliances if lighting does strike your antenna. Maybe even burn down your house.

Well, that is my opinion, and the legal disclaimer is:

Consult a licensed electrical contractor or Professional Engineer before embarking on this type of project for expert advise.

73 and good luck

lak

Just for the sake of argument let us say we agree on a $2 price tag after spending 1.75 or so to ship it via US Mail the total cost is now $3.75. I guess this is a bargian compared to $8.00 but old material.

Now on the other hand if this information is needed in advance of a trip, save the money and use a search engine to find repeater lists on-line. Cost whatever you normally spend ISP access, i.e. almost free.

Better yet do as another friend does and borrow the guide from a freind prior to a trip . This way no money is spent at all.

Start with adding a hugh capacitance on the output.
A battery does a great job of filtering too!
I often add a series POWER inductor to aid filtering.

Acutally IMO the software should be distributed for free from Motorola.
They made their money selling the radio.

822. FCC Just ANNOUNCES NEW FM CB Service!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-14 00:00:00 UTC
From: advanspec@aol.comburger
Message-ID: <20000914103505.22810.00000142@ng-ce1.aol.com>
Source record: 72044

The FCC has just approved a new license free 2 watt CB service in the VHF band. This is slated to go into effect in October. There will be 6 channels -
151.82 , 151.88 , 151.94 , 154.57 , and 154.600. Some of these freqs were formerly licensed commercial "dot" channels. A new "Subpart J" has been added to the Part 95 Citezen's Band rules and regs to cover these new FM channels. Following the "FRS" example, they have decided to name the band "MURS" (Multiple user radio service) Unlike FRS, detachable & external base & mobile gain antennas will be allowed, & power is much higher at 2W vs 1/2 watt. Actual base & mobile radios will surley be made also. CTCSS, DCS and other coded squelch systems will be included in many of these radios. Repeaters will not be allowed. Stay Tuned.....

Is this the old police radio that you can program 8 or 16 frequencies
(depending on the model) into the onboard chip? If so, I know someone in
Utah County who has the stuff. I know they've done programming before for a
couple of people.

Hey Hank:

That thinking is why CB radio is in the mess its in now.. Ham radio is heading that way fast.. Why doing we just fix it where nothing will be hard on anyone.. you want have to work for anything at all..
No drivers test... NO test for Doctors.. Hey if you decide you want to be a Doctor and you dont have even a GED thats ok you have a RIGHT to be a doctor or airline pilot.. Why should anyone go to school.. they have the right to any job they want and never a day of education...

I have been a ham for a while.. As a matter of fact I have been a ham two times.. I got out of it once because it was getting like CB because of deregulation... Hey if you cant pass something or your friend cant pass a test just do away with the test so they want have to work so hard.. I saw a seven year old boy breeze right through the OLD HARDER TEST.. made it all the way to General class when General call meant something.. It used to help you get an electronics job if you put down you were a HAM RADIO OPERATOR.. now it mean nothing because most under the new system know nothing about electronics at all.... I hear things on the local repeater like Well thats another repeater keying up our local machine.. That aint so and most real hams know it aint and why it aint.. or stupid things like Well John Im getting full scale on you but I cant understand you, your signal is broken up.. Well his meter is not reading JOHNS signal its reading the repeaters signal.. Most real hams know this and why but under the NEW GIVE AWAY SYSTEM they dont understand how a repeater work or even why you need one.. Most have taken their HTs to a real ham to have them programed because they dont understand OFFSETS or PL TONES... Hey Im sick of people with the mind set..
They cant pass a test so just drop the course.. Hank Why dont you go to CB where you should be and your kind hang out.. People like you are why most 12th grade students cant read or locate America on a world map.. You have a RIGHT to your life but go hang out with you own kind...
27 Mhz... THATS CB..

What other conclusion is there?...
You're asking for someone to pirate software...
I know.. Email Motorola, ask THEM (let 'em know exactly what you're planning on doing, exactly what software you're buying, etc) and then post the answer here.. Ok?...
I bet you're not interested, are you?... I wonder why...

Hi

I don't know if anyone can help with this STUPID question. I've had my ticket for a long time but I'm just starting to get back into things.

I've got a power supply that has a hum when it is turned on. Voltage is a solid 13.8 volts.

Hum is present on transmit of a radio. Any idea what could be wrong? I feel that it is a capacitor or transformer problem. I purchased this unit used quite some years ago but never got around to using it.

All I have is a simple Multimeter nothing fancy like a scope.

What should I do??

I already did, by PHONE. The response was that so long as only one copy
is in use at a time, loaded onto one computer, there was no conflict
with the license. It doesn't matter how many people pay for it.

Maybe you think that every single technician at a radio shop buys a
separate copy of the software . . ?

If you had made that call before playing Fearless Fosdick, you could
have saved yourself a lot of embarrassment.

For what it's worth: There are a lot of older 2m mobiles out there, limited memories, no CTCSS, no extended receive, you know, none of the things we "have to have" these days. Build a cheap antenna such as a copper J-pole or even a 1/4 wave ground plane using brass brazing rods and an old SO-239 connector and set the rig up on .52. I just bought a Yeasu all-mode rig and as soon as it arrives, that is what I'm going to do with the old Yeasu FT-211RH I have been using as a base. The 1/4 wave ground plane will go about 30 feet up my tower on a side mount made from some 1" conduit. The most expensive item I'll have to buy is about 50 feet of coax. How much easier and cheaper does it have to get to monitor .52?

If you will READ (by which I mean you have to comprehend the meaning) the original post, Keith says "Anyone in Utah with a Saber, who wants to split the cost on RSS software?" What that means is that he's looking for someone in HIS area to share costs with, not just browsing the Internet.

Def: partnership: the state of being a partner.

Def: partner: one that is associated in action with another : COLLEAGUE

(Definitions from the TIME magazine - Webster's New Ideal Dictionary)

BTW, I consulted with my brother, who works for Motorola. He says that Keith's plan is considered acceptable usage under Motorola licensing. No piracy or copyright infringement.

Mark

BTW: The next sound you hear will be the block sender filter on my PC. Bye-bye BD. "Ploink!"

Exactly what "thinking"are you implying? I stated that the spectrum belongs to everyone...as in DEMOCRACY! I never said that there should be no tests or qualifications to use the bands...just that the frequencies belong to everybody.

Get a grip on what the use of these frequencies mean. And, we're not talking rocket science or brain surgery in ability to use a radio. You push a button and talk into a microphone at its least common denominator. Individuals learn and grow to do more...ATV, packet, DF, moon bounce, etc. to name a few of the more creative aspects of this HOBBY. How can you compare a "soccer mom" using an FRS hand held or a cell phone to flying an airliner or prescibing drugs. She only needs to know some very basic information on the operation, safety and courtesy of that equipment.

>Ham radio is
> heading that way fast..

What way? You no longer have your private frequency?

>Why doing we just fix it where nothing will be hard
> on anyone.. you want have to work for anything at all..

Huh? If you're trying to put words in my mouth, try to be coherent first.

> No drivers test... NO test for Doctors.. Hey if you decide you want to be
a
> Doctor and you dont have even a GED thats ok you have a RIGHT to be a
doctor
> or airline pilot.. Why should anyone go to school.. they have the right
to
> any job they want and never a day of education...

See above. (minimum requirements, only) And, don't take this hobby out of context. Using a radio doesn't take a high IQ. Witness the idiot HAMS on HF They are an embarassment to any of us who call ourselves a HAM.
(No school? Sheesh, you really leapt past some logical steps Rick)

> I have been a ham for a while.. As a matter of fact I have been a ham two
> times.. I got out of it once because it was getting like CB because of

> deregulation... Hey if you cant pass something or your friend cant pass a

> the way to General class when General call meant something.. It used to
> help you get an electronics job if you put down you were a HAM RADIO
> OPERATOR.. now it mean nothing because most under the new system know
> nothing about electronics at all....

Congratulations on your own initiative! And I'm aware of the wonderkind who
can pass even harder exams...good!
The reference to job qualifications using your HAM license is true. Most
places won't hire people just because they are HAMS. They DO HIRE people
with MSCE after their names. Computer skills are becoming much more
important than erecting antennas, CW or a wall full of QSLs
Once again, it's a hobby.

> I hear things on the local repeater
> like Well thats another repeater keying up our local machine.. That aint
so
> and most real hams know it aint and why it aint.. or stupid things like
> Well John Im getting full scale on you but I cant understand you, your

a
> RIGHT to your life but go hang out with you own kind...
> 27 Mhz... THATS CB..
So here's the ridicule and prejudice of another HAM who hasn't taken the
time to understand my position.

> Rick
BTW, Rick, were you around to witness the ARRL incentive licensing effects.
These tougher tests stopped the growth of HAM radio and is probably the
biggest cause of the loss of spectrum to industry.

-Cheers, Hank

Donno about the configuration for the Motorola UHF duplexer, but for a DB products 220 MHz band pass duplexer, I added reject to it by using small glass piston trimmers in series with the coupling loop to ground. Used a grid dip meter to get the approximate series resonance but as I recall, the capacity was around 20 pfd or so. In my case, the finished product came out identical to the typical curves listed for a similar duplexer, in the catalog.

The main problem is in finding a physical mounting location for the glass trimmer that's sufficiently close to the coupling loop. Also since the addition of the capacitor restricts the ability of the loop to be rotated, one needs to know in advance as to what a target insertion loss should be and then mount the capacitor accordingly.

Jack

The new little ICOM portable or mobile...seriously nice and very
tough....VERY impressive for a bottom of the line rig...with additional
features never before available in this category. You can put in the
DSP chip, and a narrow SSB filter too if wanted..$595.plus
shipping...thanks Murray

It can short out if a voltage surge in the reverse direction is applied
to the diode. You may have a shorted final output transistor. It's also
connected directly to the + battery lead.

Try this;

Use 1-1/2 or 2 " PVC and fill each leg with concrete. Use a short
piece of rebar at the end of each section and glue the next using
a PVC coupling and PVC glue (The rebar will extend into the next
glued section). You should probably use a similar technique to tie
the cross members together filling them with concrete.

Hi Zack
In the real old days I miss some of ye ways we did things. Like screw terminals on everything, wiring run in very straight lines with proper right-angle bends. You never got burned by a soldering iron, or had the xyl have you explain that funny mark on the new rug.
They call it "progress"
Jack Parr

Hi All,
I have for sale a GE master II uhf mobile radio that had been converted
(Duplexed) into a repeater.
This unit does not have the pa board since it smoked but can be repaired if
you solder in another PA to it.
Included is the TS-32 tone board (cost me $59) and the ICOMS for the
444.825/449.825 band split.
Possibly the existing board could be fixed.?
I will take $75 plus shipping......

Surely you are saying this just to get a reaction!!!

You are insulting the very fine amateurs worldwide who don't happen to look like you do and whom you consider to be in the minority.

A "minority" is just as capable as anybody else of using the same route to obtain a ham license as everybody else has. Why would you think they'd be less capable and need a "break" by a relaxation of the requirements? Let's hope we never stoop so low as to have that happen due to some "PC" bureaucrat or stupid governmental tampering. Wouldn't you think that all those fine individuals who, through their own hard work have already qualified and continue to qualify for licensing would then be looked at with questioning eyes and others would wonder if they were capable of receiving a license on their own merit???

There is enough "dumbing down" of just about everything in the guise of giving some special interest group a break.

Everybody doesn't DESERVE A BREAK. If somebody wants something we have plenty of examples of people from less privileged backgrounds working hard and becoming big successes. Let's stop this nonsense of entitlement based on appearances and real or imagined disadvantages!!!

YOU HAVE GOT TO BE KIDDING!!!

WHAT A PILE OF *&^$##@^%(!!!!

(Whether or not you take this as "thoughtful" that's what it is!!!)

As an African American amateur radio operator and a member of OMIK Amateur Radio Operators Association, I believe you need to do some furhter research. Just because we don't belong to your clubs doen't mean that we are not active in the hobby, and have been since the beginning of amateur radio.

Don't worry about "us," we take care of encouraging and recruiting others --both black and white- into electronic communications fields.

I'll just live with the desense. As my (new) main 2m antenna will be a 10 element yagi, I don't anticipate too much crosstalk. I could get a notch filter to just pass .52 I suppose, but my idea is to show how cheaply anybody can set up to monitor .52. The main idea is to have it on continuously so if anybody comes up on it, there will be at least a chance I'll hear them. .52 is under-used around here (north-central Okla.) so if I hear someone, they'll probably be from out-of-state. Then, if need be, I can steer them to the local repeater. We have a university here (Okla. State) and get a lot of out-of-towners during football weekends. Not everybody is going to know the local repeater freqs but everybody knows .52.

Cute rig!
I bet there will be an all band QRP handheld, the size of today's 2 meter rigs in just a few years.
Did you check out the little Yaesu?
http://www.yaesu.co.jp/news/2400.htm
Boy, that looks like a fun rig!!!

Sounds good to me, Mark. I was just wondering if anyone else just
lived the desence, or if everyone else made a big fuss over it (filters,
etc). You answered that question very nicely. Thanks.

: --
: Jason Hsu, KB9PNZ

Most of the people I knew who were on VHF/UHF weak-signal modes in the late 60's/early 70's used transverters. The popular transverters used Nuvistor tubes. Parametric amplifiers were used as low-noise preamps.

Somewhere I still have a Nuvistor transverter for 220 MHz.

My, how the world has changed! We now have GaAsFET preamps with incredible noise figures, MMIC's to serve the purpose of those Nuvistors, and no-tune circuits with printed hairpin bandpass filters. Makes it pretty easy!

Might want to check the specs on the radio and see how much amperage it
draws on transmit and then compare it to the rated amperage output of the
power supply. If the radio draws more amps than the power supply can
produce then your going to burn up the power supply and possibly ruin your
radio as well.
just a thought.

Service monitors are nice tools, but even older ones cost serious money.
Expect to pay $3,000 to $5,000 for a used one suitable for servicing HF and
VHF/UHF radios. I tend to like the IFR units (and have two of them), but Motorola
makes some good ones too. An old Singer or Cushman is going to be a pain to
use by comparison. Even though you might find one of those for as little as $750
to $1,000, I'd pass. (Ramsey sells a piece of junk, avoid it. There are also a
number of cheap units intended for satellite TV, avoid them too. They aren't
suitable for servicing amateur radios.)

Service monitors aren't a replacement for a general purpose oscilloscope.
They don't have the ranges or triggering options that you'll need for general
servicing. They mainly just give you a look at a modulation waveform. The
primary purpose of the CRT is to be a display for the spectrum analyzer
function of the service monitor. Now that's wonderful, a spectrum analyzer
is a powerful tool, but it isn't a replacement for a general purpose oscilloscope.
(Ideally, you want both.)

You can find a Tektronix 453A for $200, and that's a great scope. A 465 is only
a few dollars more and may be easier to find, though I like the trigger circuits in
the 453A better. These are mid-70s solid state "lab" grade scopes that cost
thousands new. They were so well built that finding one that still works well is
not a problem (except for Tektronix, who found it hard to sell replacements since
these units hold up so well). Owning one of these scopes opens a new world of
troubleshooting. This would be the very first addition I'd recommend to your
collection of test equipment.

(Note, I'd stay away from some of the newer and more cheesy scopes, IE the
Ramsey import, or even the newer low end plastic Tektronix scopes. They aren't
in the same league as these 400 series units. You also want to stay away from the

older vacuum tube scopes like the 545. They're becoming unmaintainable, and they're awful shop heaters.)

The next addition would be a good calibrated signal generator. I'd suggest a HP 608. These are huge tube type boat anchors, but they are stable and reliable. You should be able to find one for about $100. (There are URM military versions floating around too. You might get one of those even cheaper. I got one for $25 at a hamfest.) A smaller solid state alternative would be a Wavetek signal generator or sweeper, but that'll cost more ($500 to $750). (A sweeper is nice for tuning up cavities, though. I have one setup to work with a Wavetek 14 inch XY display, and it is a joy to use.)

If you're going to service FM equipment, you might want to look for a Marconi deviation meter too. That should cost about $50. Heathkit sold one that was similar, though not as well built, and you might find one of those for around the same price.

So for about $350 you can get a good scope, a usable signal generator, and a deviation meter. Add to that your counter and station receiver, and you can service most of the amateur equipment out there. That's lots better than spending $3,500 for a service monitor, though having the spectrum analyzer capability is really really nice. (With luck, you may find a Tek 491 spectrum analyzer, I did for $750, and that's even nicer than the analyzer built into the IFR and Motorola service monitors.)

Where a service monitor really pays off is when you're out at a job site. One box does most of the things you need. But for the home shop, you can afford the room for separate instruments that you can get lots cheaper, and they offer you more options and more flexibility in test setups.

Take it from me; it doesn't take much to troll a ham radio n.g. But
this one had some "attention to detail" behind it. Not going too far
over the top in tone, working in a hot topic such as CW, and an
appeal to bigotry always works in rec.radio.amateur.* groups. If you
want to enrage the old guard, tying Morse CW proficiency to
affirmative action is nothing short of brilliant. The "inclusive"
language and buzzwords effectively set the mood. The ending was
predictable, and the ALL-CAPS passages were overdone, but overall,
not a bad effort. I look forward to seeing more from this artist in
the future. SubMinister C. L. Coolsmith's rating: 2.75 rat's asses
out of a possible 4.0.

Your question should really ask.."Why not N-type connectors on the other bands.
N-connectors are superiosr to PL-259s. They are true low loss 50 ohm connecotrs.

Based upon what I've seen and heard from, and of some clubs, I can't say that I blame them for not joining.

There are many fine non-Caucasian Amateur operators. Just because they choose to not join any club(s) you frequent, does not mean they are not active in the field.

Mark,

Sorry you're POed about this whole issue but, I quote KC2DWP, "and was looking for suggestions with regard to grounding my rigs and equipment".

I gave a suggestion based upon many years experience and what I learned from AT&T (Lucent Technologies) Grounding for Telecommunications training and the National Electric Code's recommended procedures for commercial communications sites.

Below is a statement I have a lot of difficultly following. Is your recommendation based upon training and/or experience the rest of us do not have? I can assure you an electro-magnetic field can impress a voltage upon another conductor, this is law of physics which can not be ignored or broken.

An insufficient ground, i.e. where resistance exists between two conducting surfaces will cause a ground loop condition. My case in point is that little pin on the 3 prong Edison plug, does it make a low resistance connection with that well used connector on the wall. In addition, have all the ground wires on the AC wiring been properly crimped without corrosion? I have found too many times electricians have not done a very good job installing these grounds, or maybe the house was built prior to 3 wire AC circuits.

There is only one grounding system that provides a common path for unwanted or stray current flow to a common point, not several systems each with it's specialty current to handle.

I agree with the first part.

My reference to using NO-OX was in conjunction with a good crimp type connector such as a C-Tap that has been properly installed. NO-OX by itself no doubt is not enough just the way I worded the statement made it not too clear.

I respectfully disagree with your reply. I don't think Jewish people could consider themselves minorities. Keep in mind that there cannot be true prejudice unless the person making the race distinction can really make a distinction. You have no banner across your face saying "I"m Jewish." You most likely look and speak like most other white Americans. African Americans are not blessed as you are starting out with a clean slate. The prejudice against them is a real as is their distinction in an all-white crowd. You're blessed with a great intellectual and cultural history that withstood the test of time. African Americans had their lives uprooted and the best way for them to have the opportunities of enjoying our great hobby is to provide them incentives to get their feet in the door. Hopefully, this will result in future generations enjoying and actively participating in our hobby. Minor incentives like dropping the code requirement might work wonders in this regard. Other possibilities might include allocating a few frequencies on the popular bands where only minorities would be encouraged to use. If potential minority hams knew that certain frequencies were set aside for them to share their culture, all hams would share in the experience. My idea is NOT to limit minorities from using all frequencies, but only to give them the benefit of a few special frequencies to share in the empowerment of their identity as a great people if they so choose.

While you may be sincere or only playing devil's advocate in expressing your concern regarding past discrimination, as an amateur who happens to be Black, I question the need for affirmative action regarding licensing of radio amateurs. I believe fair opportunity already exists for ALL persons including those with disabilities to obtain an amateur license. As an amateur, who happens to be black, I have held membership as well as office in many of the local amateur organizations over the last thirty eight years. Most have been predominantly white in membership but some, OMIK (http://webusers.anet-stl.com/~ka0etf/omik.htm), and WARFA (http://www.warfa.org/), in particular has a predominantly black membership and others, AMSAT, (http://www.amsat.org/) has members from many ethnic backgrounds world wide.

> ensure an integrated society of amateurs and allow equal opportunity.

While there are in some cases economic reasons contributing to the "electronic divide". It can best be addressed by informing and demonstrating those alleged victims of the so called divide to the many advantages and importance of computers in today's society. In my employment I have found many homes without computers etc. but many of the same homes had a 60 inch color TV with all of the premium cable channels and not a book, magazine, or news paper in view. While I have three computers and what some may say is too much amateur gear, books, magazines, etc. all over the place, I have no TV with a screen larger than twenty seven inches and no HBO, Showtime etc. It is not that I cannot afford the TV but that I do not see it as a necessity or od significant importance. All segments of society must be convinced of the advantages associated with computers, the internet, and amateur radio. We must also be accepting of the fact that these things are not for everyone.

I must point out that, at this time, we are prohibited from eliminating the code requirement for operation below 30 MHz by international treaty. The suggestion that the code, as well as the idea of WAIVING SOME SECTIONS of the written exam, must be eliminated so that more African Americans could participate in out hobby, should be opposed by all persons in general and Afro Americans in particular. As a black, I find it insulting that you are implying that blacks are not as capable as whites to pass the code test as well as portions of the written exam.

I am a black male age 54 and have been licensed since the age of 15. This was when you had to go before the FCC examiner and there were no multiple choice questions. You received a test paper and you had to write the correct answer to each question. You were required to draw schematics etc. I, as well as all others, took the same examination and either passed or failed on our own merits. To my knowledge I received the same exam as the whites and yes I was the only black at the session. I missed one question and was told that no one had a higher score. I know there are some that may say "well you were the exception." I have not found this to be the case at all. I believe that I am only average in ability, but perhaps, I am far above some when it comes to the desire to be knowledgeable not just in regards to our wonderful hobby, but the desire to possess knowledge about as many things as possible.

It appears that while your intentions may be well meaning, they are non the less flawed in my opinion. You, as well as a significant segment of modern society, seem to be of the mind set that we must have all of society equal to one another. It has always been, and remains so today, that we are not all equal. Some members of society have more ability or knowledge than others. Ability is not now, nor has it ever been, a result of the race of the individual. Unfortunately opportunity has at times been dependent on the ethnicity of the person. The possession of knowledge regarding a particular subject has been lacking in both individuals as well as certain segments of society. This has not been restricted to Afro Americans and in general has been due to only a few reasons. Two of the reasons are;

1. The perception that the knowledge in question is neither needed nor desired by those lacking said knowledge

2. The refusal of those in control to make the knowledge available to all of society (generally for reasons of fear and prejudice, or personal gain)

One must remember that all testing is by its nature discriminatory. A test is designed to discriminate between those that know and those that do not. To eliminate discriminatory testing is to eliminate the test itself. All that should be required or expected by any member of society is that the administered test be a valid predictor of an individuals ability to function in the capacity of the area being tested for and that they be given equal opportunity. One can design a test to obtain an amateur license that only test knowledge of nuclear physics. While it certainly can be argued that the test subject matter is not relevant to amateur radio operation, if we all have access to the study material, I think it will be difficult to prove racial discrimination. This is an extreme example and is only used to make a point. It is obvious that upon challenge the test would be proven irrelevant to the possession of an amateur license but the claim of racial discrimination would be much more difficult.

Many may argue whether the code, or a particular portion of the written exam, is a valid predictor of ones ability to be a successful amateur. Recent "Restructuring" of the amateur service has shown that the FCC has felt that the code as well as portions of the written examinations needed to be made more relevant to today's amateur service. It is without a doubt, at some point in time, the code will be dropped as a requirement for obtaining an amateur license. Will it ever be banned? I do not think so. The failure to ban is good. This will permit those, like my younger brother Jim (KA8HAK) who wish may continue to dar dit dar dit dar dar dit dar (CQ), be it at 5 wpm or 50 wpm, may do so until their harts are content. If you would like to argue portions of the exams relevancy, I am certain that many others may agree on some points but to say that the FCC exam discriminates against black individuals or to imply that blacks lack the innate ability to compete with the rest of society is ludicrous and insulting.

I have heard and seen the statements regarding the "dumming down" in recent years of the amateur service will eventually lead to the destruction of our hobby. I am not concerned about that. What I am concerned about is the disturbing trend on the part of our society in general that we must eliminate failure in all areas so as not to give someone a poor image of themselves. Failure is a part of life. One must realize that in order to eliminate failure one must never try anything. Failure to reach a desired goal should be seen as an incentive or challenge to try again. This is provided the desired goal is deemed worthy. If all failure were eliminated from my life, I would still be in diapers and unable to crawl, to say nothing of walking, driving or participating in this wonderful hobby of amateur radio.

> Numerical goals for admission to our great hobby is necessary to integrate a
> hobby traditionally closed to minorities because of discrimination. At a time
> when our hobby needs a shot in the arm, these kind of policies might help in
> increasing our numbers and preserving our power to demand that no more of our
> frequencies be taken away. Any THOUGHTFUL replies are welcomed.

Numbers or quotas for the sole purpose of having inflated statistics is fruitless. I know that some believe that amateur radio as well as all occupations must, or at least should, be reflective of society. I for one find that idea frightening. Do not get the idea that I believe the bulk of society is composed of undesirables. In truth my beliefs are just the opposite. I believe that most of us are in fact good industrious individuals that are capable of rising to great heights. Unfortunately some people have been led to believe that they are unable to be competitive or that it is wrong to be so. None the less, there are some members of our hobby and society in general that I would rather not see in this hobby nor have them as a next door neighbor.

The desired shot in the arm may be better realized by each of us currently possessing an amateur license, recruiting or mentoring one person in the next twelve months to become an amateur radio licensee. If this goal were to be realized, our numbers would nearly double! I do not know what your ethnic background is nor do I even know if you possess a license, since you failed to indicate your call letters or name in your posting. I encourage you, as well as all of the members of this news group, to recruit one person in the next 12 months regardless of their age or ethnic origin. With each of us doing our part in promoting this hobby to members of society, amateur radio will not simply survive,

it will prosper.

73 Thanks for putting up with me.

Hi
Thanks

I am sending this message to all who replied on
the MFJ Tuner. Also sending in the order received.

This is embarassing
QLF QLF ON MY PART

The MFJ Tuner Brought 17 emails in 2 hours and I could not figure out
why!
I only got one email for another item ''the 18 Ft. tower.

Then I read what my Clerk posted
Wow $15.00 HELP??!!!
Should be $65.00 and still a bargain.
My Clerk operates on qrp brain power.

So in the order of received e mails I will accept the first re bid for
$65.00
I do not want to make it a contest so no need to bid over.
It is my fault so I will not profit from it.

I apologize for the Trouble and to be fair I am correcting the Post.

Will be back to all re-bidders regardless if they do not get to buy it.

we accept paypal
www.paypal.com
or
prepaid with Cashiers check or money order.

Once again I am sorry for the trouble.

I am deeply disappointed to warn you not to deal with Warren Brooks W4WWB. He advertised a radio on ebay that was complete, but needed some work. What arrived was a parts radio - Pieces were missing and it will not power up. After he ignored my emails I contacted him by phone and in his best good ole boy drawl he told me " you bought it, you own it". He would not allow me to return it for a refund. I know that ebay is a take your own risk venture - but deliberately lying about the condition of the radio to sell it is dishonest. What a disgrace to the ham community. Don't be suckered by this man like I was.

Here's my thoughtful reply.

Any black person reading this post would be horrendously offended.

An African-American can learn morse code as well as anyone else.

Secondly, in regard to dropping certain sections of the multiple-choice exams, there is no need for that since the exams are not oriented to any particular ethnic group and, thus, a black is not going to be any more or less disadvantaged than any other person.

I suspect you're a racist and a troll.

Thanks for the thought. Try again.

As I recall (having one about 35 years ago), this amp is of the older ilk; that is to say, it required an external coax relay. The "keying" was done via the front panel (amplifier) switch and/or contacts on the (typically) Dow-Key relay. This amp was before transceivers were popularly marketed. The coax relay also muted the receiver.

Read the owner's manual that came with the radio to see how many amps it draws. In fact, most radio equipment has it written right on the back of the radio.

If the radio requires less than 20 amps, then you'll be just fine. If not, you'll have to run another power lead.

With a 100 watt transceiver, I think you'll be right at the edge with a 20 amp outlet. You may want to run another power line just to give yourself a little more room than that (even if the radio is under 20 amps).

946. AFFIRMATIVE ACTION NEEDED IN HAM RADIO!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-16 01:46:58 UTC
From: crt4239@aol.com
Message-ID: <20000915214658.26056.00000077@ng-fd1.aol.com>
Source record: 71830

Anyone who attends a ham club meeting would have to agree that certain minorities, especially, African Americans, are grossly underrepresented in our hobby. I believe, and I think many of you will agree, that perhaps we should remedy the effects of past discrimination by some sort of affirmative action allowing underrepresented minorities a FAIR OPPORTUNITY to get their tickets. Much has recently been reported in the last decade of growing "electronic divide" in the percentage of white versus black households having computers and Internet access. You would all have to agree that this "electronic divide" has ALWAYS been in the amateur radio hobby. This would be a perfect time in our country's history, especially in light of the dwindling numbers of potential hams lost to the computer hobbyists, to begin thinking about policies that might create real interest in our great hobby. My ideas of remedies for past discrimination include DROPPING THE CODE REQUIREMENT FOR MINORITY APPLICANTS and possibly WAIVING SOME SECTIONS OF THE EXAMS. Such remedies are a way to ensure an integrated society of amateurs and allow equal opportunity. Numerical goals for admission to our great hobby is necessary to integrate a hobby traditionally closed to minorities because of discrimination. At a time when our hobby needs a shot in the arm, these kind of policies might help in increasing our numbers and preserving our power to demand that no more of our frequencies be taken away. Any THOUGHTFUL replies are welcomed.

I was emailed the following response (I deleted the sender's information) and am posting my response to him:
>>>>>>>>>>>>>>>>>>>
Affirmative action would reduce the value of your license. There is NOTHING based on race, ethnicity, or any other demographic, prejudicial about a ham license.

Additionally, your proposal insults all of the legitimate progress made by African-Americans. I'm black, and I'm offended that you would propose this.
>>>>>>>>>>>>>>>>>>>>>>>>>>
While I believe your response is sincere, I also believe your response is in the minority in the African American community. I believe that Rev. Jackson was also sincere when he said that African Americans want "not welfare but FAIR share." As an African American, I think you should be more sensitive to the plight of your people and just give them the benefit of the doubt to make up for past wrongs. Great people like Rev. Al Sharpton have dedicated their lives to protecting your rights; the least you can do is support the cause. For more insight into affirmative action policies and their good on society, I encourage you to check into the following sites and reflect on the good information they contain:
American Association For Affirmative Action (www.now.org/issues/affirm/)
American United For Affirmative Action
(www.auaa.org/)
NOW and Affirmative Action
(www.now.org/issues/affirm/)
Your concern that "[a]ffirmative action would reduce the value of your license" is unwarranted because the majority of license holders would still have to work hard to pass the code; only certain minorities would be exempt from taking the code test. It's no different from giving a minority member welfare; it doesn't make my money any less valuable because I still have to work hard to earn it.
Thanks again for your sincere, although misplaced response.

Probably that they're sold into worldwide markets each with different
legal limits. Just like there's no amateur transceiver or transmitter
sold new in the U.S. that will transmit on all HF frequencies up to 30
MHz. I had to dig to find the mod to my Kenwood TS850 so I could even
work my CAP network frequency that is barely outside the hambands.

Well I just found out that it has what old CW units used called 'grid block keying'. The grids on standby are forced negative beyond what it takes to cut off current flow. Putting a ground on that resistor brings the bias down to operating level. Somthing to that effect.

>W1WOW
Jason,
You will be right on the edge or rated amperage. I would buy the cord OR check out powerex.com for connectors that can be made up to fit any situation radio wise. They have connectoers to fit the FT 100 and quite a few people reccomend that over buying the power cord from Yaesu. You will pop a fuse at the worst time if you try to use the lighter connection. Also ground the computer extermly well in the Jeep it is RF sensitive.

My Icom HM-56 handheld microphone seems to be stuck in transmit.

My Icom 229-H 2-meter mobile radio has been in storage for a couple years. Decided to revive it when my Yaesu FT-2000 bought the farm. The Icom radio works fine but the microphone is keyed at all times. Upon examination I found a lithium battery in there, but this is probably just for the DTMF functions.

Does anyone have any tips, or a wiring diagram for the HM-56? Your help would be appreciated.

Most interesting... Anyone who remembers the little Drake TR22 circa ~ 1970 can properly appreaicte this addition.. TR22 had 6 xtal controlled channels on 2meter FM with a watt abd a half output to an internal telescoping antenna powered by an internal nicad battery pack, and was widely used by outdoors types. Now the same -actually smaller- space gets you 5 watts allmode DC to daylight, probably for not that many more inflation-adjusted dollars.. We've come a long way indeed.

I'm not Po'ed. I don't know what gives you that impression. If I were
PO'ed there would be no doubt in your mind.

So? I don't get the question. But, I can say most of what I imply is
from experience over the years. I've gone both routes, the "traditional
ground" and pretty much "no ground". After trying both, I much prefer NO
RF ground for the shack. But, not to confuse...The power ground for
shock protection is NOT an rf ground, or is intended as such. I've been
the route you suggest, and also most of the other ARRL traditional
methods. After a few years of dealing with these, I've come to the
conclusion they are a waste of time. Except for the lighting angle. But
I consider that a seperate issue. Thats outside the shack, not within.
>

> grounds, or maybe the house was built prior to 3 wire AC circuits.

Sure, you should always check that the 3rd ground pin is actually hooked
up. The connection to the ground shouldn't be a problem in most cases.
The purpose of this ground is shock protection, and shock protection
only. You can easily check to see if the connection is good. You can add
it if it isn't.
>

> There is only one grounding system that provides a common path for unwanted
> or stray current flow to a common point, not several systems each with it's
> specialty current to handle.

See, this goes back the my original purpose of the thread. "The RF ground".
#1: If the antenna is complete, you need NO rf ground at the shack.
#2: If the antenna is not complete, IE: a ground mount vertical, you need an rf ground at the ANTENNA.
#3: If you have a case of common mode currents flowing along the shields of the feedlines, this is a antenna/feedline problem. Not ground!!!No amount of grounding will cure the real problem. Which is a lack of decoupling between the antenna and the feedline. To my way of thinking, the methods you stated, while nothing is really "wrong" with them, try to bandaid a problem caused by the antenna/feedline. I don't use an rf ground here, and haven't for a few years. I actually have less problems with rf in the shack now, than when I used to use the "old" grounding methods. And I run up to legal limit power at times. I have no rf problems with my rig, no tvi, etc. The real reason people have rf problems in the shack are from antenna related problems, such as neglecting a balun from antenna to coax, neglecting a ground radial system on a vertical, etc.

Now as far as lightning protection, you should use a ground window bulkhead, and all wires should be supressed or grounded to that bulkhead. Not a single wire can pass that bulkhead. IE: power, phone, etc. But this grounding has a totally different use than any of the "shack" grounding. it will have no effect on rf problems etc. It only makes sure all items hooked to that ground is at the same potential. This insures no lightning current can flow. But like I said in an earlier post, I consider this a totally different system than the ground needed for shock protection. And I'll say it again, if the antenna and feedline is proper, there is NO need whatsoever for an rf ground in the shack. Whats it going to do? Nothing. And if you have an rf problem, whats it going to do? Again, nothing. You have to fix the antenna/feed problem. It's the real culprit. But anyway, maybe it would be best for the original poster to state exactly what he wants the ground for. I'm still not sure at this point.But my original impression was that he thought he needed an RF ground in the shack. I still say thats a big waste of time. I've got my flame suit on...g MK

Also, I don't want to give the impression that I don't think you know
your business. I'm sure you do. But your original post was pretty much
lightning related grounding. And was a good system for that purpose. My
comments pretty much stem from the RF ground angle I thought he had more
in mind. I've got definite thoughts on rf in the shack...I went thru
many rf problems with a certain rig I ran for quite a while, and
therefore had to do some intense rf troubleshooting during all this.
After that, I pretty much adopted the "RF ground a waste of time"
theory. I found in many cases the "rf ground" actually made things
worse. So anyway, don't take any offense from my posts. None intended. I
just have strong thoughts on this subject. MK

983. Ft-101EE slow receive recovery?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-17 00:00:00 UTC
From: Glenn Butzlaff <gbutzlaff@voyager.net>
Message-ID: <39c528fc$0$99040$726baab@news.execpc.com>
Source record: 71775

Just wonder if anyone who ever owned/owns a Yaesu FT-101EE has ever had a problem with slow receive recovery after a lengthy transmit. I can hear the T/R relay switch release, but it seems like the AGC is real slow or delayed. Sometimes there is a total lack of receive, or partial receive with an audible pop when the receive fully recovers. Suppose Ill have to get a repair manual, but was wondering if anyone else had a similar problem and how it was solved. Any info greatly appreciated.

Glenn Butzlaff

987. Programming an IC-Q7A

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-17 00:00:00 UTC
From: Phil Wheeler <w7ox@earthlink.net>
Message-ID: <39C559B7.AC1AB7C0@earthlink.net>
Source record: 71779

One of my local repeaters has changed frequencies, so I need to re-program my rigs. Unfortunately, I cannot find the manual for the Icom IC-Q7A.

I've managed to get into the menu system and reprogram the rig to the new freq in the VFO mode. But when I save the results to memory, it does not save anything other than the freq (Duplex, Tone, etc. are not saved).

CAn anyone walk me thru this? I don't particularly want to order (and wait for) a new manual.

Phil W7OX

989. Re: Best dual-band handheld

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-17 00:00:00 UTC
From: "Donald Whiteman, KK9H" <donw@interaccess.com>
Message-ID: <39C56C40.4E6CEBFC@interaccess.com>
Source record: 71781

I recently purchased an Icom IC-T7H for $199.95 after some research into simpler HT radios and love it. The T7H covers 2M and 440 MHz plus extended receive above and below each band. This radio is very easy to operate and transmits about 2 1/2 to 3 watts with the supplied 9.6 volt battery. The receiver works very well and seems to have minimal intermod issues which is good for a dual conversion design. I openly recommend it to you.

73, Don

Source record: 71784

My favorite mobile radio a TM 741 went suddenly silent today
Display works , Memories all there , shows signal on the smeter
but not even a hiss if I open the Squelch
Speaker beeps when I do a key entry and seem to transmit
Changed speaker and did a cpu reset no effect
Anybody had this problem?
It's getting to be an older unit (outlasted 3 cars) but still in nice
condition
Any ideas would be welcome
THX - VA3XZ

Mr. Reese:

I thank you for your eloquent reply to CRT4239. I did not have it as hard as you did when I got my novice license. I did have to get the 5 WPM and then 13 WPM for my general. The Electronics was easy to me but schematics? Ugh.... I do appreciate what you went through in your testing times.

I believe there is a general disinterest in the amateur radio operations field. Not for the testing or the theory, but for the lack of interaction that today's X/Y generation have with those around them. Give them a video game or internet access and watch them go though....

998. Help ! No FM RX FT757Mk1

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-17 00:00:00 UTC
From: Ted Pratt <tpratt@posm.screaming.net>
Message-ID: <39c4e1f2@news.server.worldonline.co.uk>
Source record: 71790

Hi ...

Can anyone point me in the right direction / know of faults on the 757Mk1?
Problem 1
No RX on FM. Seems like an IF problem, you can hear the fully quietened audio
but its very low volume.
Problem 2
On SSB RX. If you touch or talk into the mic. it comes through the speaker (low level).
Maybe this is related to problem 1.
Problem 3
Occasionally I get very low audio output on everything SSB/CW/FM. If I tap the bottom of the
transceiver it comes back. I can seem to induce the fault with the top and bottom covers off.
Problem 3
When first switched on always comes on at 7.0000Mhz. (Is there an internal memory back up battery).

All help appreciated Ted

Depending on what course you followed:

Did you contact him ahead of time (prior to bidding, or at least prior to
close of the bidding) to confirm the description.
If the radio was not as represented you can contact e-bay. They do have
recourse for things misrepresented, but they also expect you to have done
some checking ahead of time as well.

1003. Jeep Cherokee "POWER OUTLET" for 100w Rig?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-17 01:59:31 UTC
From: jhulet@aol.com
Message-ID: <20000916215931.13903.00000003@ng-cl1.aol.com>
Source record: 71887

Hello,

My 1997 Jeep Cherokee has a separate "cig lighter -type" socket with a plastic cover over it that reads: POWER OUTLET
12V 20A

and the manual reads as follows;

POWER OUTLET
The power outlet has a direct feed from the battery so it receives power whether the ignition is on or off.

I would like to use this accessory plug with a 100 watt transceiver mobile as it is much easier to plug and unplug to and take the rig in and out of the vehicle for home use. That is instead of pulling the power cable through the firewall and around all that duct work, ect. every time I have a few minutes to operate from the comforts of home. I have a Astron RS 35A with two larger clips and a female reciever connected after about 8 inches of 12 gauge wire to mate with the male cig lighter adapter on the end of the rigs power cable...

Anyone doing this with there Jeep Cherokee? Says right on the Socket cover that that it is 12v 20A..... 20A should fit the bill for at least 90 watts or so, or am I all wet? I know I could just purchase another power cord for what $30+ !!! Yikes... only if I have too!

Thanks for any and all comments!

73

1016. Radio reviews / older radio info

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: markus@markus_nospam_.org
Message-ID: <39c5c4e7.131946038@news.sefanet.ch>
Source record: 71702

I'm looking for sites with information about older radios, reviews,
technical data etc.

For scanners there is strongsignals.net with excellent information.

Are there sites like this for amateur radios ?

Markus

1017. Faster scanning on FT-100

I've used mineral oil, just fine, in a Heath Cantenna, and you can get
it at any drug store.

MFJ will sell you a gallon of official industrial-quality transformer
oil for $24.95.

I know that on a Med cruise in 1983 we had a CW net operating during a communications
emergency. Yes, we had to have at least one CW operator on duty at all times in the
shack. 1983 is a long way from what is normally called post-Vietnam era.

1027. >>[BRAND NEW TOUCH TONE SHURE MOBILE MICS]<<=

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: msisco9939@aol.com
Message-ID: <20000918120841.20696.00000709@ng-fj1.aol.com>
Source record: 71713

Hi:

I have found a few Shure Model 885TT Mobile Communications Mics with a illuminated keypad. They also come with a Mic cord (As New) for a Phoenix / PSX radio, or you can cut the end off and use whatever plug you desire. Designed to work with almost all Commercial and Consumer grade Mobile Communications radios.

http://shure.com/products/use/mobile/885tt.html

New these mics are $165.00 (Without the Cord)

Asking $65.00 for the ones BRAND NEW in the box (With a cord for above)

Asking $55.00 for the ones that have been used a short time, but are in perfect shape. Looked unused except for the surface scratches

Please allow $8.00 for Pirority Mail, Insured, Shipping and Handling w/Delivery confirmation. on the mic hang-up button.

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

Monty

1028. Heath IM-4100 Info

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: Tony Angerame <tangeram@grigri.eng.ascend.com>
Message-ID: <39C64573.D02D494A@grigri.eng.ascend.com>
Source record: 71714

I have isolated the problem with my IM-4100 counter to IC-2.
Unfortunately it is only marked with a HeathKit Part Number. The part
number is 443-697. Could some kind soul please translate this into a
real part number? Most of the logic in this counter is TTL so I suspect
it is a 74XXX.

Thanks in advance for the help.

There are actually quite a few sites. Go into any search engine and enter words like Hammarlund, Hallicrafters, National, Collins, R.L. Drake, Boatanchors, etcetera -- you'll find a good amount of info.

1030. Re: Plastic Antenna Tower

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: Paul Burgener <Burgener@Bigfoot.com>
Message-ID: <8q5kh7$us0$1@nnrp1.deja.com>
Source record: 71716

Thanks for the advice, folks. A couple of you even send directly to my email account. I appreciate your help. Sounds like the odds are against us.

I'm sorry to tell you this, but my friend and I haven't gotten back to the plastic antenae project since the holiday weekend, several weeks ago. Unfortunately we've already glued the "rings" solid, so we can't turn back but so far now.

One idea might be to glue the "rings" apart with short plastic pipes at the ground (say 3 feet), then progressively lengthen the pipes between the higher and higher rings. Near the top, the rings might be the entire 6 feet (or more) vertically apart.

I figure the failure will likely be due to legs buckling in heavy constant wind. Without the old engineering books handy, I assume buckling of the pipes is a function of bending moment (torque) on the base of the assemble, as well as the elasticity (which we can't control short of the concrete and re-bar idea). That is, the lower verticle (upright) pieces will have a higher compressive load in them due to the distance from the wind's applied force, near the top. This compressive load will cause the buckling of the lower-most legs.

So once again, if we reduce the risk of buckling at the bottom of the mast (by shortening the vertical pipes), maybe it'll work. The risk of failure at the top of the mast is low because the wind is at the top, causing little bending moment.

As for the water freezing, if it gets inside, our winter temperatures aren't very low (7 degrees F is a record low, back in '85 or so). Maybe to be safe we should put a spoon of anti-freeze in each leg, and/or let the water drain into the ground either from the bottom or the side of each leg.

The mast will be secured to the house, but only at about 12 or 16 feet up. That might reduce the buckling risk at the bottom of the mast.

As for guys, you're right, that's the way SMART people would rig it. Unfortunately the land is rather urban (his father's small back yard) and can't be taken up by the wires any more than absolutely necessary.

As for trees, there are a couple nearby. That's what the 180-meter antenae wire originally used. I don't fully understand, but for some reason shooting an arrow over a branch to hoist up the antenae wire isn't an option.

Anyway, thanks, again. I'll try to let you-all know again when we
finally get it erected.

Catch you later.

1031. FT-8500 Receive Audio Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: "W. S. Henry" <william.s.henry@boeing.com>
Message-ID: <39C64DA4.C590781F@boeing.com>
Source record: 71717

Hi!

The receive audio on my FT-8500 recently dropped way down as compared to the UHF side. I confirmed this by operating the radio in VHF/VHF mode, and the audio coming out of the right side (default UHF) was okay. Anyone have expeience with this? Is it likely the failure of the output device or the driver? Is there anything else I need to look at?

Are there reputable repair facilities other than the Yaesu service center? It's been so long since I did bench work, I'm not comfortable taking this on myself.

Thanks!
KJ7FD

How damn long does it take to fix a radio these days?!!!!!!
July 10 i sent my Kenwood TH-G71A in to Kenwood for service after buying it brand new 5 weeks prior.2 weeks went by,then 3, then 4.....so i got a little concerned,and sent them an email,then another, then another.....
Finally got a response over a week later.Message was "parts just came in,working on it now" Well ok,it took a month for a Kenwood based service center to get the parts,fine,i swallowed that and figured, ok i should have it in atleast a week or two.That was over a month ago,i have sent numerous emails since then with absolutely no response!!
So now its been over 2 months since i sent it to them,whats going on?
They have owned the damn thing longer than i have!
Has anyone else experienced this with Kenwood?
I have 3 other Kenwood transceivers,and I would hate to have to send one of them to Kenwood for repair.This will sure make me think twice about buying another Kenwood product.

Rare find: James Millen 2 inch CRT panel with power supply

This is Model 90912 using a 2BP1 CRT

Panel is 3 in. H X 5 in. W X 8 in. D

Panel has the Intensity, Focus, Vertical Centering and Horizontal Centering controls

Separate power supply uses 110 VAC 60 Hz input. Has 830 VDC and 6.3 VAC outputs

Schematic included. (No sweep circuits or vertical amps are part of the panel)

In perfect mint condition, never used. No scratches on panel.

A .jpg picture is available upon request.

Only $50 plus shipping from Atlanta, GA

1035. Cellphone mods to 900mhz

There is a repeater on the South Rim of the Canyon.

I know it is not useable for a large part of the North Kaibab Trail.
There is good part of this trail that is in a canyon, in the Canyon.
You will see what I mean when you hike it.
I am not sure of the status from the South Kaibab Trail or Bright Angel.
But I would not count on it. Once you cross the river, I would doubt you
would have line of site to the south rim repeater.
You might monitor 146.520Mhz. (wilderness protocol)
I would not use it as a safety net instead of good planning.

Good luck on your hike, it is a great sight.

If you have any more questions, feel free to ask me.

KJ7FD, go to my web page and get the phone number to Scott Malcom and give him a call. He is the best tech in the US. Worked for Icom for 20 years. He has fixed 3 FT8100 rigs for me. He finds the problem, and does not just start replacing parts ... sends the radio back to you with the bill. If you want him to diagnose the problem only, he will do that for free.
Good Luck
Try him and you will never use anyone else.. Tell him K5JOE sent you.

Hi:

I am looking for a detailed Service Manual, and Accessory Manual for the Motorola MSF5000 Digital Series Radios.

The Manual "Must" have the information on the C64CXB7106B Series Radio. ANY / ALL will be considered !!

I have lots of Motorola Two-Way and Test Equipment, Parts and Supplies for Trade, or if all else fails there is CASH. So if you wish to turn that Old Manual Stock into CASH, please contact me.

I already have the ANALOG version, but will entertain those as well as a back up.

Monty

Ya that is going to be my next step i guess Barry, problem is Bell
Canada was putting long distance calls on my bill that i know myself nor
any of my family members made,this happened often,and seeing how i
don't know anyone long distance, i told them to block long distance
activity on my line. Therefore to make a long distance call, i have to
go to a phone booth and use my calling card.
Alot of hassle, but i guess i'll have no choice.

Is there a toll free number to call?
The only number Radioworld gave me was a direct #.

Wayne

ALINCO DJ-580T handheld---$175

Dual band, receives both 2 meters and 440 MHz simultaneously
Covers AM (RX) from 108-130 MHz and FM (TX/RX) from 130-170 MHz and 415-470 MHz
Will also receive from 810.000-998.9875 MHz

Comes with antenna, handstrap, instruction manual, and schematic diagram
Comes with EDC-24 tabletop drop-in charger
Has EBP-28N, 12 VDC at 700 mah battery (NICAD) to give 5 watts output power
Also will give you the ESC-17 soft case (for a shorter battery than the EBP-28N).
Original box included. Will double box for shipment.

Very clean with no dents or scratches. Some wear on the ALINCO logo but key pads are clear and fine.

Asking only $175 including shipping to your door.

OS-8C/U 3 inch oscilloscope---$35

This is a DC to 2 MHz single vertical channel oscilloscope
It has synchronized recurrent horizontal sweep. (Not triggered sweep)
It is a vacuum tube scope manufactured by Jetronic Industries, Inc.,
Philadelphia, Penna
This is unit with S/N 2734 manufactured in Aug. 1962
It also comes with instruction/maintenance manual and heavy duty case,
CY-1300/U.
.JPG picture can be e-mailed to you upon request.
This unit is very clean and has no dents, scratches, or wear on the scope
panels.
Plugged it in and it gives a sharp bright trace.
Trace is tilted slightly (CRT can be rotated) and horiz. gain seems a bit
low so some adjustments may be necessary.
Total weight is about 20 lbs (scope is 15 lbs) from Atlanta, GA
Only $35 plus shipping.

To be quite honest, I hadn't thought of that one, but it seems to make a great lot of sense.
Hydrolic fluid is hydrolic fluid because of its capacity to absorbe great amounts of heat (generated by pressure).

sounds like a pretty good idea -- -any mechanical or fluid engineers want to comment on this????
k5cf may have something here.

cheers

1053. Re: Hiking across the Grand Canyon

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-18 00:00:00 UTC
From: Gary Zabriskie <garyz@xmission.com>
Message-ID: <8q6mgb$1mt$1@news.xmission.com>
Source record: 71739

It sounds as though I would be better served not worrying about it. I was hoping there would be coverage over a good part of the trail. I wonder why a repeater isn't located up on the north rim where it would cover most all of the trails.

What about FRS use in the canyon? Do you know if there is any practicality of that in the canyon for short range contact between hikers (1-2 miles)? I may get apart from the others I am going with. We are doing a straight through hike, not staying down in the canyon at Phantom Ranch.

I guess I need the new portable QRP rig from Yaesu (160-uhf) for portable with a long wire hanging over the edge. Hi Hi. Wonder if my wife will go along with that. I mean, I really NEED a new rig. Oh well!

Thanks for the info.

Sure don't want to use MOTOR OIL OH NO don't do that ..Mineral oil is AOK.
I only can find it in 5 gallon containers for $ 20.00...Don't know what to
do with 4 gallons, but one day a local ham will need some and you can
help..... To ship that stuff takes a special container which cost is HIGH
....Keep asking locally and you will find a place to purchase Mineral oil.
It is what I use and no problem even at legal output....

Be vary carfull here on brake fluid as it is very dangerous if spilt
on just about anything Painted,of course believe it or not plain ol water
will dilute it just fine! I would shoot for good ol mineral oil.

If you loading a KW for over 20 seconds you may wan't to read your manual
on pretune for a band eh? Just a thought.The mineral oil will do just fine

Interesting that the Hispanic folks felt they were too grossly under represented. It's been my experience that most, not all, but most Hispanics do not wish to converse in English nor do they want to interact with the rest of us.
My sister-in-law is from a small farming community is Mexico. She and her husband both speak Spanish(of course) and they live in a community with very little diversity. They hardly socialize at all and when they do, they go to all Spanish speaking events and parties. She feels uncomfortable going to places where everyone speaks English.
I visited a local store and they were paging people in Spanish. I felt like the minority.
There has been a huge debate on English being the main language, but most Hispanics don't want to speak it. So, we now have to spend millions more is taxes to print every Gov't form in both English and Spanish. Keeping your native language alive and teaching it to your children is wonderful, but when it gets forced upon some of us who wish not to hear it all the time nor wish to learn is not right. I for one would not like our local repeaters crammed with Spanish conversations.
I have several Hispanics friends and my sis-in-law is Hispanic. I am not a racist. I am just a guy that loves my country and our main language is ENGLISH. If I wanted to live in Mexico, I'd move there, but it seems that it's moving to us...

Flame suit on...

And how many Hispanics do you suppose hope to reap the benefits of learning
our Contry's first language, English?

And how many Hispanics do you suppose regret not applying themselves in
English during high school?

You are an excellent example of the most pernicious form of racism - that
which covertly insults under the guise of overt compassion.

For years I have used standard 30wt motor oil. I also tried mineral oil.
It works fine, and IMHO as good as standard transformer oil. But,
most of the time I just use a 200W lamp.

I wish you a lot of luck. I believe that VHF/UHF QRP faces three problems: 1) There just is not much real activity on the weak signal portions of the bands. 2). At HF, most of the 5 watts generated in the transmitter gets to the antenna, unlike VHF where a significant portion of the power is lost in the feedline. 3). The quality/complexity of receiver and transmitter required for weak signal work at VHF is orders of magnitude greater that at HF.

Here in So. Cal, most of the non-satellite cw activity on the VHF and UHF bands takes place during contest weekends, and at or near the SSB calling frequencies. The CW portion of 2 meters is not used very much. Ditto for 6 meters, 70 cm, and 23 cm. My observations of the VHF and UHF bands here are that they are largely unused -- including the FM portions. Yes, there are lots of repeaters, but I here more activity in the evenings on the simplex frequencies than on the repeaters.

There used to be some cw only sprints on the VHF and UHF bands that produced some activity. If you have any ideas as to how to get more people on, I am sure that there are a lot of people who would be interested.

Good luck,

Tim AA6DQ

Hi Tim:
I can see there is a lot of possiblility here. I found a web site that had a tracking transmitter for 144 and 220 and thought to myself "Self, why don't you check on the QRP web sites for QRP VHS/UHF projects."

My web search was not exactly fruitful. VHF/UHF frequencies are always finding other pathways to ground rather than be radiated from the antenna as I understand it. They get lost in coax faster and easier.The projects that use them take a lot of planning as lead lengths and proximity of the parts to each other generate impedances that are detrimental.

My purpose is tracking and RDF for the purposes of finding lost model rockets, lost model airplanes, lost cars......and maybe start up an new class of QRP contacts. More challenges.

I saw an add on a local bulletin board regarding a N.C.G. HF transceiver for sale. It seems this radio is 10-12 years old and has a digital VFO. It has an output of 250 watts from 10 to 160 meters on all modes (LSB, USB, CW-W, CW-N).

I have not found very much information from the seller as he is selling his old man's rig and he clearly doesn't know much about the rig. Before driving 1.5 hour to go see it, I would really like to learn more.

I have tried eHam and there is no review of such a rig.

I am particularly looking for a web site or an email address to reach NCG.

There have been all kinds of goodies published. From stuff
published in QST, for example, you could easily come up with
a VXO transmitter, a little brick amplifier and a direct-
conversion receiver. Or team up an HF radio and a transverter.
Whatever works for you.

Who to talk to with such gear is another matter entirely.

>So, where is the most common source for mineral oil?

They sell it at the drug store in little pint bottles. It's a bit
embarrassing to show up at the counter with eight bottles of mineral
oil, but, what the hey.

Maybe some of the big discount stores sell it in gallon quantities.

bierbier@my-deja.com
shared these priceless pearls of wisdom:

->I would like to know what would be the best and the cheapest oil to put
->in my Dentron Big Dummy.

Oh, lord, not this thread again. This seems to surface every three or four months. Anybody volunteer to do the faq so there aren't the usual two dozen answers?

Mineral oil, automatic transmission fluid, brake fluid, motor oil, chardonnay and hydrolized horse piss seem to be the most common contenders. Try one.

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Guess what! The language of record here is ENGLISH! All who intend to live, work and prosper in this country are obligated to learn English and not the other way around. Maybe you think the USA should teach the language of all who come to this country? Wouldn't that be fun!

For the record, I'm an Italian who grew up in El barrio Latino de New York. I learned Spanish over thirty years ago on my own from books because I wanted to not because I had to. All my Latin friends spoke to me in English and to each other in English, as well, when in my presence so that I would not feel "left out". Very respectful I thought but as it turns out, I would have learned much more Spanish if I HAD to speak it to communicate with them.

Today, I speak Spanish at every opportunity because I love to and so that I can continue to learn and improve my ability and become more and more fluent. Just for a personal achievement.

Bottom line:
If you are so wrapped up in your own culture that you chose to ignore the prevailing culture, maybe you shouldn't come here(to the USA).

By the way:
Don't make it seem like Hispanics are somehow inferior or incapable of adjusting to their surroundings and need to be held by the hand!

Alex

I have a complete Rohn HBX 48 free standing tower with rotor plate
and all hardware
plus a 10 ft antenna mast for sale or trade in Central Texas....I
will bring it to Belton
Texas for the hamfest on OCT5, or you can come get it now if you
like...it is in
excellent shape, just a few years old....it is down and ready to
travel in one nested
section. Weight is 353 lbs...you can see it in AES Cat. page 134. I
will take $375 for
it where its sits, or $500 with a refurbed Ham IV rotator. A good
bargain! Or if you
cannot come get it....I will deliver it after oct 4-5 for another
$100 in Texas....Thanks
Murray

With all due respect, what makes you think they do not, and just what do you consider "Hispanic"? The population of the high school I attended was over 1/3 "Chicano", Americans of Mexican/Spanish decent who certainly considered themselves "Hispanic". Many traced their family roots to a time when the western half of this nation belonged to Mexico. They were proud of their heritage, but guess what - each and every one of them spoke English as well as any "Anglo" ... so well that they had just as much trouble learning textbook Spanish as the rest of us. I sincerely doubt that you would be able to distinguish any of their speach from mine on a repeater or otherwise. I am also certain that they would be deeply offended by your suggestion that they cannot pass the same tests I did. After all, they did in school and have ever since. Ditto the black kids who comprised another third of the school. Yours is the most pernicious form of prejudice!

Mineral oil is best because if you spill any you will not have a toxic problem. Most oil cooled dummy loads have a vent/overflow, and I doubt you want brake fluid or other such things spilling out, particularly if you have children or pets.

1099. Re: Help - Kenwood TM-741A - No audio

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-19 00:00:00 UTC
From: markus@markus_nospam_.org
Message-ID: <39c792e6.109722642@news.sefanet.ch>
Source record: 71681

If you can hear the beeps from the keyboard the audio amplifier still works. I suppose the beeps get louder if you increase the volume.
The S-meter is probably driven by the AGC to reduce IF/RF amplification when the signal gets stronger. Usually is is generated somehere after the IF. The working s-meter could indicate that the HF/IF signal path is still working.
Both things two together point to somewhere between FM decoder and the audio processing circuitry.
As Clif pointed out, a problem in the squelch circuit is possible.

Now you need a schematic to go further, there are quite a few possibilities for the audio to break.

If you don't have some experience you might be better off sending the unit to a repair center.

Hi folks:

I see plenty of QRP CW Transmitters and receivers on the HF bands, but how about projects in the VHF/UHF bands? I would be especially interested in the 220 and 432 Mhz bands. The antennae are smaller even for a Yagi.

Also, how about hams operating CW in these modes, are you out there?

Although what you propose sounds as if it has merrit, any one who takes the same test(s) to different standards, or I should say lesser standards usually comes out feeling as if they have not accomplished as much as those who adhered tot he regular standards.

This is true in athletics, Flying, Amateur Radio, or any other endevour. It also applies to age.
When I compete agains younger people, I expect to be tested to the same standards, not given preference because of my age.

In some instances, where people have defered to my age and suggested competing in older age groups, I felt insulted...I do pretty well even against much younger individuals...Not outstanding, but pretty well and that gives me a feeling of accomplishment.

I was 47 when I went back to college full time. Most of the kids treated me as just "one of the bunch".

"The kids" were pretty much a wide diversity of races and religions. We were all tested to the same standards and I did right well.

"I think" that we do anyone a disservice to hold them to a lower set of standards. It's the same as saying "you aren't good enough so we are going to make things easier for you". Now how much of a sense of accomplishment do people feel when that happens? Not much at all.

I say these things as my age puts me into a group that is oft times heavily discriminated against and I despise being given preferential treatment because of age and I don't figure I'm all that old.

The last time I went to a local club meeting, minorities were well represented with a higher percentage there, that in the local population. However I readily admit that was a while back.

> Oil. What would be okay?

The Dentron oil was safe. I've forgotten the make up now, but it was not
hazardous.

Plain old mineral oil works just fine, is cheap, and readily available
.
If you can afford it, and can get it, Dow Corning 200 fluid on the order of
50 to 100 Cst Viscosity would probably work good.
Otherwise hunt for standard transfomrer oil.
I'd not use motor oil as its primary function is lubrication and not heat
conductivity. That and it really smells when you get it hot, but it probably
would work if you used a low viscosity.

I'm trying to get some information for a fellow ham who does not have access to the net.

He has an Alinco 2m linear amp and would like some info regarding it's circuitry. It has the model number ELH230E. I have not been able to find any info on this amp for him on the net. Is anyone familiar with this amp or know where more information on it can be found?

Many thanks.

I was happy with the INTELLIGENT email responses that I received to my posting on affirmative action. I did receive several racist emails as well, and that of course was expected considering the race and age of the majority of hams who use ham newsgroup sites. Several of the intelligent, thought - provoking replies came from Hispanics who thought that they too were grossly unrepresented in our hobby. I believe that it is our civic obligation to encourage Hispanics to enjoy amateur radio as well. I'm proud to say that in my metropolitan area, which is near 3 fairly large cities, Hispanics are finally catching on at least on our VHF and Uhf repeaters. I am happy to report that (at least in my area) that many communicate in Spanish, which makes the repeaters a bastion of cultural diversity, which is what our hobby should be all about. I would hope that many in this newsgroup make a special effort to show off their hobby to Hispanics in their own communities (especially in the use of 2 m and 70 cm radios and repeater operation) and help them with Element 2. Make sure that they understand that Spanish is welcome and they need only use English to identify their stations. I in turn hope to reap the benefits of learning our country's second language, Spanish, which will become even more important in upcoming decades as our nation undergoes further shifts in the proportion of Hispanics. My biggest regret is not applying myself in Spanish during high school. Now I know what my grandfather meant when he said "Youth is wasted on the young."

*Some* break fluid has alcohol.
There are also several Silicon based break fluids and they too, have good
heat transfer.

Unfortunately, like most Silicones, they are a bit pricier than the
"regular" blend.

Well, Wayne, I hate to break it to you, but it sounds to me like they have lost your radio (don't get too upset, it happens). The response you describe is exactly the response most companies use when they lose a customer's item.

At first, employees receive your email, cannot find the item, and lay the email aside hoping the item is already in shipment to you. Then, when other messages come in, they delay (we're working on it) as they search for the item. And, finally, when still more messages appear, they delay some more in the hopes that the item will eventually show up somewhere.

In the end, you have to get around these front-line blockers, and talk to someone who can make real decisions. Tell that person you're tired of the delays - find the item now, fix it today, ship it back today, or send a new item. And forget email. Email is almost totally useless when solving a complaint (too easy to delete and ignore). Call by telephone. Get the person's name. Get a fixed promise from this person (I'll take care of the problem today, etc.). Be polite, but firm. And, if you have to call back in the future about this problem, try this person first (remind the person of what he promised earlier).

Again, don't get too excited about the problem (not easy when it's your problem). Remember, when a company handles a large volume of merchandise, stuff like this is going to happen occassionally. It does not mean they are a bad company - only that they made a mistake (who hasn't).

Of course, that does not excuse the endless delays, but blame that more on human nature than on the company (when an employee cannot figure

out what is going on, it is human nature to put the problem aside and ignore it). In other words, it is probably not the company's policy to treat customers this way - things just got messed up because people didn't know how to deal with this unusual situation.

Good luck, Wayne.

>Hydrolic fluid is hydrolic fluid because of its capacity to absorbe great
>amounts of heat (generated by pressure).

Actually it is because it is non-compressable. Usually it does have good
temperature characteristics though...

I'd be a bit concerned about brake fluid, because it is terribly hydroscopic
(it loves water, soaks it up right out of the air). Probably be OK inside a
sealed can, but the water that it does pick up will corrode the can from the
inside out. I'd rather have something that protects against corrosion...

What about automatic transmission fluid (ATF)? I frequently see it for
$1/quart, and I know its temperature characteristics. ATF doesn't absorb
water so it won't cause corrosion. It does have detergents (and type F has
some friction additives) that may not be good... But I don't know anything
about mineral oil, other than I can eat it. :)

>sounds like a pretty good idea -- -any mechanical or fluid engineers want to
>comment on this????

Please do!

This is fine if you can form a local group of enthusiasts who build
these equipment have regular schedules with them.

Otherwise you are only going to have contacts with a few big contest
stations who have big antennas within 200 .. 300 km during some
contests. Doing some hill top operations during these contests will
help you to contact some more stations.

I am sorry for sounding so pessimistic, but many hams who bought a
multimode (CW/SSB/FM) rig (which usually have about 10 dB more
transmitter power than a QRP rig) were disappointed, since the actual
number of stations they could contact did not increase as much as they
had hoped.

The 144 MHz band might be a bit easier for CW QRP operations.

Long range (300 .. 600 km) VHF/UHF troposcatter communication requires
10 .. 30 dB more power than is available from a simple 1 .. 5 W
transmitter with a short yagi.

But as I said, if you have a enthusiastic local group with whom to
work with, there is no need to worry about these things, you can make
plenty of contacts with them.

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the antenna
when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

This was one of the first batch. I built it with great care, and installed a
10-turn POT and did the suggested mods, and tuned it to "prefection"
with an 0-scope. Excellent QRP rig, worth its weight in gold. Unfortunately,
I just don't have the time for radio these days, and I need to pass this
baby on to someone who can enjoy it and get some use out of it.
I am asking the same price I paid for it, because it's worth it, and it's
in good shape. PRICE: $120.00 + $5.00 priority mail shipping.

Email me if interested. Prepayment with M.O. or check preferred.

> Transformer oil is the best thing...

Transformer oil used to contain poly-chlorinated biphenyls (PCBs). Recent findings suggest that the risk health associated with exposure to these chemicals is not as high as first thought, but I sure wouldn't want them in my shack. If you get transformer oil, make sure it's PCB-free. These "Cantenna" style loads have relief vents, and are always a little oily outside, especially on top. I'd go with mineral oil; that stuff is totally safe--you can drink it.

Murray, trust me on this recommendation.
Scott Malcom at MTS is by far the best.
Especially on Icom rigs.
Call him 509-732-8883. He is in Colville WA, his info and address is on my web page.. http://www.hamtrader.cc
You will never use anyone else. He had NO minimums, low shop rates, and will diagnose your rig and tell you what it will cost to fix it. If you choose not to have him do the work, he will send it back to you , no charge for his work.
If you let him fix it, he will send the rig back to you with the bill in the box. If you are satisfied with his work, you send him a check. YOU CAN'T GET SERVICE LIKE THAT ANYWHERE ELSE!
Tell him that K5JOE sent you.

I don't operate 432MHz and we don't have a 220MHz amateur band here in Ireland. Last year I built a simple CW transmitter for 2M. I made many contacts via the RS13 satellite (2M up 10M down). I worked several U.S. and Canadian stations and lots of Europeans. You will find details of the transmitter at: http://www.qsl.net/ei9gq

There's lots of CW activity on 6M. I use 10W from a homebrew transverter and a simple delta loop. I managed to work PY5CC who is almost 6000 miles away.

Have fun on VHF/UHF. You may lose a few decibels in the feeder but this loss can be offset by the gain of a good beam aerial.

With the prohibitive cost of amateur radio equipment these days, the obstacle
may quite possible be the initial expense of getting into the hobby. On a
different note, you talk about physical distinctions excluding people from
being able to participate in different activities. I would ask how one would
expect to be treated equal as long as we continue to put labels on ourselves
that say we are different. I refer to the hyphenated American. Though one
should know and cherish their heritage, there are times when your national
origin or ethnicity should not be an issue.

Body handling: Binary attachment payload not displayed: RadioRanch.vcf

Either the MC 60a or the Heil mic with HC 5 cartridge...would be best
and most simple...next step up would be the W2IHY equalizer with the the
Heil Goldline!! But get the equalizer anyway if its in your budget...it
can really hop up your audio on any of these mics...
Enjoy...73 Murray

Good evening all. I am in need of four VHF Alphanumeric pagers in the 160 mhz range. My exact frequency is 163.250. They can be new, used, Motorola, or another brand. We will be using them for a local automatic security system. Can anybody help or point me in the direction of one who might? I have heard of a Mr. Radio somewhere in the midwest but have not been able to locate him. Please respond via email. Thanks and 73's Don Smith KB6GQA

Gary,

The radio will tune to the amateur band without modification. I used one on my 444.200 repeater for years with no problems. I will check Thursday for a manual and schematic. I am not certain that I still have one. Will let you know.

1162. Icom 735 Freq Shift

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-20 00:00:00 UTC
From: Niel Wiegand <nielw@ix.netcom.com>
Message-ID: <39C985CB.C6FB9FD5@ix.netcom.com>
Source record: 71594

I've an ICOM 735 that I use on PSK31 running about 25 watts. About 10 minutes into a QSO it will suddenly start shifting frequency as if some frequency logic had become unlocked. I've tried shorting out the PA thermostats so that the fan runs continuously but the problem still occurs.

Any ideas?

73, Niel

Radio law dictates that anyone can use any language as long as they
identify in English. There is no laws prohibitiing Hispanics from
using Spanish on repeaters, or any other language for that matter.
Take this line to alt.nazi or something like that and for us DXers who
do speak other languages like me, will still enjoy international
fellowship provided by Ham Radio,,,,, even in Spanish

How long are your packs lasting???

>>...getting something other than a Nickel Cadmium...

What are your use and charging habits?

>>...NiMH or Lithium Ion...Do they suffer from a memory effect...

No - nor do modern NiCad packs.

>> ...do they last longer than Nickel Cadmiums?

NiMH packs will last about 2/3 the total number of discharge-charge
cycles when compared to modern NiCad packs.

They are lighter ... easier on the environment when it comes to
disposal ... and usually offer greater amperage in the same physical
size pack. BUT they require SPECIAL HANDLING when it comes to charging.
You NEED a charger that recognizes NiMH packs - as the proper charging
algorithm is much different for NiMH than for NiCad packs.

> ...are aftermarket battery packs good?

Many reputable firms offer packs for your radio!

> Also, are they compatible with my NC-50 one hour Rapid Charger?

ONLY NiCad packs are to be used in your NC-50 charger.

Hi

I wonder if anyone can help our group find 2 Strumtech Versatower P40 winches for a tower that we've been donated? Have any of you dismantled a tower due to failure, but the winches are okay and have them lying around in the way? If you have we'd like to hear from you and how much you want obviously!
Perhaps you had to obtain new ones for your tower, any pointers would be appreciated.

Thanks in advance for any help...

> >rest of us.

My experience has been just the opposite. All of the kids I went to school with either spoke fluent English or were eagerly learning to do so out of economic necessity (One cannot expect to earn good wages in any country unless one speaks the language). We SoCal teens were quite popular with our peers in the Mexican border towns we visited because they not only wanted to know English but to have the right idioms and accents. Even the few who didn't were willing to put up with my admittedly poor "Spanglish", if only out of courtesy. The only folks I ever met who felt as Dan suggests were bigots themselves.

Frankly, I'm a bit ashamed that I am pretty much monolingual, a situation I'm working to rectify. I read that kids 3-10 years old pick up languages easily. IMHO we should keep English our official language, but should begin teaching every kid at least one other language in elementary school.

Subject: Re: AFFIRMATIVE ACTION NEED IN HAM RADIO!!!!!!!!

And I thought I had seen it all! EVERY ham, regardless of their ethnicity, should be upset. As a Black man who happens to be a ham, I am disappointed by this minutia.

As we both know, AA is needed in Ham Radio about as much as I need to be hit by a train. If we as hams REALLY need this, then how did I obtain my EXTRA class license in the 70s, before ANY of the standards were lowered?

This AA thought process is strange, at best. I wonder why the author would suggest such an outrageous idea. Most, if not all of the potential amateur radio ops I know, and that are minorities, would be insulted by the mere suggestion. Besides, if the FCC were to lower the standards any further, we might as well have no tests at all!

BTW: My 11 year old daughter has been a ham for almost a year, receiving her ticket when she was only 10. I wonder how she did that without the benefit of the below suggested AA for minorities? Perhaps she studied??? WOW, what a novel idea!

While you may be sincere or only playing devil's advocate in expressing your concern regarding past discrimination, as an amateur who happens to be Black, I
question the need for affirmative action regarding licensing of radio amateurs. I
believe fair opportunity already exists for ALL persons including those with disabilities to obtain an amateur license. As an amateur, who happens to be

black,
I have held membership as well as office in many of the local amateur
organizations
over the last thirty eight years. Most have been predominantly white in
membership but some, OMIK (http://webusers.anet-stl.com/~ka0etf/omik.htm),
and
WARFA (http://www.warfa.org/), in particular has a predominantly black
membership and others, AMSAT, (http://www.amsat.org/) has members from
many
ethnic backgrounds world wide.

> Much has recently been reported in the last decade of growing "electronic

> ensure an integrated society of amateurs and allow equal opportunity.

While there are in some cases economic reasons contributing to the
"electronic
divide". It can best be addressed by informing and demonstrating those
alleged
victims of the so called divide to the many advantages and importance of
computers
in today's society. In my employment I have found many homes without
computers
etc. but many of the same homes had a 60 inch color TV with all of the
premium
cable channels and not a book, magazine, or news paper in view. While I
have three
computers and what some may say is too much amateur gear, books, magazines,
etc.
all over the place, I have no TV with a screen larger than twenty seven
inches and
no HBO, Showtime etc. It is not that I cannot afford the TV but that I do
not see
it as a necessity or od significant importance. All segments of society
must be
convinced of the advantages associated with computers, the internet, and
amateur

radio. We must also be accepting of the fact that these things are not for everyone.

I must point out that, at this time, we are prohibited from eliminating the code
requirement for operation below 30 MHz by international treaty. The suggestion
that the code, as well as the idea of WAIVING SOME SECTIONS of the written exam,
must be eliminated so that more African Americans could participate in out hobby,
should be opposed by all persons in general and Afro Americans in particular. As a
black, I find it insulting that you are implying that blacks are not as capable as
whites to pass the code test as well as portions of the written exam.

I am a black male age 54 and have been licensed since the age of 15. This was when
you had to go before the FCC examiner and there were no multiple choice questions.
You received a test paper and you had to write the correct answer to each question.
You were required to draw schematics etc. I, as well as all others, took the same
examination and either passed or failed on our own merits. To my knowledge I
received the same exam as the whites and yes I was the only black at the session.
I missed one question and was told that no one had a higher score. I know there
are some that may say "well you were the exception." I have not found this to be
the case at all. I believe that I am only average in ability, but perhaps, I am
far above some when it comes to the desire to be knowledgeable not just in regards
to our wonderful hobby, but the desire to possess knowledge about as many things as
possible.

It appears that while your intentions may be well meaning, they are non the less
flawed in my opinion. You, as well as a significant segment of modern society,
seem to be of the mind set that we must have all of society equal to one another.
It has always been, and remains so today, that we are not all equal. Some members
of society have more ability or knowledge than others. Ability is not now, nor has

it ever been, a result of the race of the individual. Unfortunately opportunity
has at times been dependent on the ethnicity of the person. The possession of
knowledge regarding a particular subject has been lacking in both individuals as
well as certain segments of society. This has not been restricted to Afro
Americans and in general has been due to only a few reasons. Two of the reasons
are;

1. The perception that the knowledge in question is neither needed nor desired by
those lacking said knowledge

2. The refusal of those in control to make the knowledge available to all of
society (generally for reasons of fear and prejudice, or personal gain)

One must remember that all testing is by its nature discriminatory. A test is
designed to discriminate between those that know and those that do not. To
eliminate discriminatory testing is to eliminate the test itself. All that should
be required or expected by any member of society is that the administered test be a
valid predictor of an individuals ability to function in the capacity of the area
being tested for and that they be given equal opportunity. One can design a test
to obtain an amateur license that only test knowledge of nuclear physics. While it
certainly can be argued that the test subject matter is not relevant to amateur
radio operation, if we all have access to the study material, I think it will be
difficult to prove racial discrimination. This is an extreme example and is only
used to make a point. It is obvious that upon challenge the test would be proven
irrelevant to the possession of an amateur license but the claim of racial
discrimination would be much more difficult.

Many may argue whether the code, or a particular portion of the written exam, is a
valid predictor of ones ability to be a successful amateur. Recent "Restructuring"
of the amateur service has shown that the FCC has felt that the code as well as
portions of the written examinations needed to be made more relevant to today's

amateur service. It is without a doubt, at some point in time, the code will be
dropped as a requirement for obtaining an amateur license. Will it ever be
banned? I do not think so. The failure to ban is good. This will permit those,
like my younger brother Jim (KA8HAK) who wish may continue to dar dit dar dit dar
dar dit dar (CQ), be it at 5 wpm or 50 wpm, may do so until their harts are
content. If you would like to argue portions of the exams relevancy, I am certain
that many others may agree on some points but to say that the FCC exam
discriminates against black individuals or to imply that blacks lack the innate
ability to compete with the rest of society is ludicrous and insulting.

I have heard and seen the statements regarding the "dumming down" in recent years
of the amateur service will eventually lead to the destruction of our hobby. I am
not concerned about that. What I am concerned about is the disturbing trend on the
part of our society in general that we must eliminate failure in all areas so as
not to give someone a poor image of themselves. Failure is a part of life. One
must realize that in order to eliminate failure one must never try anything.
Failure to reach a desired goal should be seen as an incentive or challenge to try
again. This is provided the desired goal is deemed worthy. If all failure were
eliminated from my life, I would still be in diapers and unable to crawl, to say
nothing of walking, driving or participating in this wonderful hobby of amateur
radio.

> Numerical goals for admission to our great hobby is necessary to integrate a
> hobby traditionally closed to minorities because of discrimination. At a time
> when our hobby needs a shot in the arm, these kind of policies might help in
> increasing our numbers and preserving our power to demand that no more of our
> frequencies be taken away. Any THOUGHTFUL replies are welcomed.

Numbers or quotas for the sole purpose of having inflated statistics is
fruitless. I know that some believe that amateur radio as well as all occupations
must, or at least should, be reflective of society. I for one find that idea

frightening. Do not get the idea that I believe the bulk of society is composed of
undesirables. In truth my beliefs are just the opposite. I believe that most of
us are in fact good industrious individuals that are capable of rising to great
heights. Unfortunately some people have been led to believe that they are unable
to be competitive or that it is wrong to be so. None the less, there are some
members of our hobby and society in general that I would rather not see in this
hobby nor have them as a next door neighbor.

The desired shot in the arm may be better realized by each of us currently
possessing an amateur license, recruiting or mentoring one person in the next
twelve months to become an amateur radio licensee. If this goal were to be
realized, our numbers would nearly double! I do not know what your ethnic
background is nor do I even know if you possess a license, since you failed to
indicate your call letters or name in your posting. I encourage you, as well as
all of the members of this news group, to recruit one person in the next 12 months
regardless of their age or ethnic origin. With each of us doing our part in
promoting this hobby to members of society, amateur radio will not simply survive,
it will prosper.

73 Thanks for putting up with me.

Most, if not all of the potential amateur radio ops I know, and that are minorities, would be insulted by the mere suggestion. Besides, if the FCC were to lower the standards any further, we might as well have no tests at all!

BTW: My 11 year old daughter has been a ham for almost a year, receiving her ticket when she was only 10. I wonder how she did that without the benefit of the below suggested AA for minorities? Perhaps she studied??? WOW, what a novel idea!

I like what you say Laura, but what does Alcholics Anonymous have to do with ethnicity? Many many hams need AA but wanting to is what makes hams.
No matter the color or if they drink too much either. Just my thoughts....dont tell me what to do, I do what the voices in my head say to!! Murray
PS: I know what you did Chip, and someones coming to get you.....unless the men in white coats get there first.

Hey Murray.....think he might have meant AFFIRMATIVE ACTION and not
Alcoholics Anonymous ????

Hic...!!

1210. Found What I need now I have to sell what I wanted to trade

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-21 00:00:00 UTC
From: gundoc <gundoc@iglou.com>
Message-ID: <39ca74d9_1@news.iglou.com>
Source record: 71638

I found a GE suitcase programmer but for cash not a trade. Here is what I want to sell.
1. GE Master 2 UHF Repeater, Deskmate case (about 40" high) 40 watt output. 30 Amp GE power supply. I will add to this a GE Master 2 mobile 75 watt with preamp so you can upgrade to higher power and add the pre amp. Needs Icom's, Duplexer, feedline and antenna. (I have not run this repeater but was told it works and was running GMRS) $800.00 plus shipping
2. Decibel Products Duplexer. GE marked and with a GE part number. NOS. still wrapped in the plastic never hooked up brand new. 3 can UHF tuned in the 451.xxx area now. $275.00 plus shipping
3. Regency rackmount UHF repeater. Just the repeater no rack included. Repeater is tuned in the GMRS area now but no crystals. I have never run this repeater as I only bought it for the rackmount 100 watt amp that was with it.
$175.00 plus shipping
4. CSI - 22 community tone panel. I just bought this but decided that I only needed 1 PL tone on a ham repeater but I think this controller and all so it might be just the thing for someone. $85.00 plus shipping
Any questions e-mail
Dean

1211. HOW to fix your TR-4 ,your T-4XB and your R-4/ R-4A

1212. FS: PC serial cable for FT-890, FT-900, others

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-21 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <1vvy5.12002$nk3.564307@newsread03.prod.itd.earthlink.net>
Source record: 71640

This is a W1GEE cable - here's the info from the website:

Model LCU-3Y2 for Yaesu (FIF-232C Compatible)

This model is connected to your computer by a DB-25 female connector (you can use a 9-to-25 pin adapter) and to your transceiver by a Mini-DIN connector.

Work with Models:

FT-757GXII, FT-840, FT-890, FT-900

I used this cable successfully with Prolog2K for interfacing to my FT-900. Includes the cable as described above, loop-back plug for testing the serial port and cable, diskette with diagnostic program for running the loop-back test. New cost is $39.95 plus shipping. I'll sell it for $25.00 plus $4.00 for Priority Mail anywhere in USA.

1213. HELP!!! Transformer wiring for Yaesu/Sommerkamp FT-221R

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-21 00:00:00 UTC
From: Web Williams <krNO4wmSPAM@mindspring.com>
Message-ID: <MPG.143457c483f42de598968e@news.mindspring.com>
Source record: 71641

Anyone have an owners manual (or a radio they can look inside of)? A friend of mine brought one of the Yaesu/Sommerkamp radios back from Germany, and asked me to convert it over from 220v to 110v. I see that the transformer apparently has two sides with taps labelled 0, 100, 110, and 117. It began life with the two center taps strapped (117 to 0) and the outermost taps (0 and 117) appearing to be the AC line voltage input, one from the fuse and one from the switch on the front of the radio. I removed the strap and left the 0 tap connected to the switch on the radio front and moved the 117v tap (connected to the fuse through which line voltage flows) to the other 117v tap (the one near the center of the transformer). The radio now turns on and receives quite well, but when transmitting, the relay chatters and no RF is produced. Did I wire something wrong?

Please remove NO SPAM from my e-mail address to reply directly, or simply reply in the newsgroup if you don't know how and/or are too lazy to remove it.

Thanks, -Web Williams in Myrtle Beach, SC

1214. Re: AA NEEDED IN HAM RADIO!!!My Word !!

I believe these things have been gone for a long while. There used to be an outboard Digital Read Out for these radios, but I doubt you could find one now.

I believe this could be done with PIC microprocessor (maybe several!) but I am a ways from doing that yet. The counter and display are all in the same chip.

My FT301D has a couple of other problems as well that has me looking at new rigs....

Message-ID: <5565-39CAA839-65@storefull-132.iap.bryant.webtv.net>
Source record: 71644

Looking for an amp or schematic .... 5-10 amps IN, 30-whatever OUT.
14.200 Mhz (20 meters). For the days when 5 watts just doesn't cut it.
Does anyone make such an animal? All I can find is 2 meter stuff with a
QRP input. A kit would be real nice.... :) Johnny Julian

While I am sympathetic on the whale situation, I doubt that the Japanese give a rat's ass about whether or not you buy a transceiver from them.

If you (or we) don't want to buy Japanese products, we will have to stop driving cars and buying new TVs.

But in this rare instance, you have options. Ten Tec is alive and well as is our own Arizona-grown Kachina.

Hi Gang -

I'm not sure I would blame all the Japanese manufacturers for the
sins of a couple of others. I don't believe all of them compete
unfairly.

However, there are plenty of very good alternatives to Japanese
radios anyway. Go look at Ten Tec, or check out Elecraft.

Because of FCC rules to prevent CB amps, such a kit cannot be offered for sale. However, Communication Concepts (www.communication-concepts.com) does offer all the parts and info from Motorola Applications Notes. It's not a step-by-step kit, but can be put together if you have some building experience. QST has also had some good articles. I built a 50-watt amp for my Argonaut 509 from an article in the July, 1981 QST. Also, there's still a lot of Ten-Tec 405 amps around, from the days when they were legal. They offer 50 watts out for 1-2 watts in on 80-10, in a nice, pretty compact package. A used one usually sells for about $150-180.

I reread the post and I can't find the PERIOD you refer to. But no
matter...I use that as a way to emphasize something.
>
> The problem with the internet is someone can make a statement that is open

Of course. Thats whats good about the internet. But I still don't think
my original answer was really wrong. Maybe not as detailed as I could
have been on my position, but he only asked about grounding his rig. I
was just defending my position that you said was wrong. Grounding a rig
using a power supply ground wire is not wrong. And if the rig is only 12
volts , and no shock hazards, thats not even needed. Of course, I'm
always willing to hear other views. MK

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

Deleted text from here on.

I guess maybe this is an internet cultural impression but I took the all caps "PERIOD" to indicate so. During the my past 12 years on the internet this an accepted way of indicating strong displeasure, i.e. upset or mad.

The problem with the internet is someone can make a statement that is open for interpretation, and like one other poster said many opinions will be spawned.

I have not been on HF for a couple or three years and then it was not much.

I think you just pushed me over the edge on the Ten-Tec Pegasus.

A while back I bought a FT301 (Non digital) here for parts. I guess I need to start thinking about going the other way.

I could hand it down to my son, but I would probably have to fix it first, and that is what I am trying to avoid! Too many projects and not enough time....

Ron wrote:

I have not read this whole thread yet, but panic has set in already!

Unless you have a big free stash of schedule 80 tubing begging for a home,
you can beat the price and the structural integrity with off the shelf
parts from Radio Shack at the 40 foot mark.

Paul Burgener wrote:

1239. Yaesu FT1000MP MK-V, Does it have a computer interface?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-22 00:00:00 UTC
From: kpb@fc.hp.com
Message-ID: <8qftriffc1@fcnews.fc.hp.com>
Source record: 71525

I have looked at Yaesu's flier and webpages and do not see
mention of whether this radio has a computer control interface.
Can anyone shed some light on this? If it does, how similar is
the interface to other radios like the FT847?

Thanks, Kevin

Some more suggested reading for you.

Try: "Bonded Passengers to America" ISBN 0-8063-0997-7.

A casual perusal will quickly show that blacks were not the only people "uprooted" and "killed, tortured, and turned into slaves." Many, many English and Irishmen were sent to this country as "bonded" (read "slave") laborers.

Often, they had been charged with the pettiest of crimes and were sentenced to servitude in the colonies. "Contractors" who used the same ships as were used to transport Africans often transported them. The difference was that the survival rate for Africans was higher than it was for the English.

Many of these criminals stayed in America after their sentences were completed and became the bedrock founders of this society.

Damned near every ethnic group that has come to this country en mass for reasons of famine, economic hardship or strife in their home countries have been subjected to unwelcome discrimination. The Irish, Poles, Italians, Jews, Chinese, Koreans, Vietnamese, you name it, have all had their turn in the barrel.

Certainly blacks have suffered in this country but so have the other ethnic groups. We have unprecedented numbers of foreigners trying to get into this country, even at the risk of their lives. They look at America like a kid looking through the window of a candy store. They just want to get in so they can partake of the goodies. And yet we have a group still complaining about how their ancestors arrived 300 years ago.

Blacks should do what every other American does when he sees a mess; get a broom, a mop and a bucket and get to work cleaning it up. It's only "fair."

1247. Japanese Made Equipment

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-22 00:00:00 UTC
From: pete owen <nutmeg@w-link.net>
Message-ID: <39CB9CF5.D17F9E89@w-link.net>
Source record: 71533

For the last couple of months I've been doing a survey of transceivers prior to re-equiping my station. I narrowed my choice down to two models, one by Kenwood and the other by Icom. Both are excellent products technically and aesthetically.

Last night I was watching the news from ITN on the local public TV channel. I heard that the Japanese whaling fleet had returned to port bearing almost 90 dead whales. These whales are on the endangered species list; a fact of no concern to the Japanese. They carry on their activities in the name of "research" in spite of the oposition of civilised countries.

Because of this I will not buy Japanese products of any kind until they cease their barbaric activities on the high seas. I guess I will be cleaning and tuning up my old Gonset SB-100 unless I can find a good non-Japanese manufacturer of high quality amateur radio products. Please support me in this endeavor. If we all refused to buy their products, the Japanese would be forced to bring their ways into line with their ecologically aware world neighbors.

I don't quite see the point.

Why don't you just buy a used 100-watt transceiver for a couple of
hundred bucks? I can't imagine a decent "qrp amp" being much cheaper,
if such an animal exists.

Good luck. They are doing the same thing to American Ham radio gear
manufactures that they did to the consumer radio and TV manufactures,
driving them out of the market. They only thing they have not killed yet is
the microprocessor market, but they are trying.

1255. The Timewave DSP-599zx V5 upgrade

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-22 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <MeQy5.16367$ks.645730@newsread1.prod.itd.earthlink.net>
Source record: 71541

If you have a 599zx and are interested in trying out the binaural CW feature of the V5 upgrade chip, here's another binaural technique you ought to try first.

Feed the receiver audio into both the A and B channels. Set the speaker and line routing parameters to "dual", not "mono". Set the line and input levels to the same value for both channels (I used -6 dB for all, your setup may require a higher or lower value. Don't forget, you'll need stereo headphones for the binaural effect.

Set up the CW filter as you like it and then listen to some CW signals. In one ear, you have the processed CW signal, coming through the CW filter. In the other ear, you have the completely unprocessed signal. As you tune across the signal, it first is heard in the unprocessed ear. As the signal enters the CW filter passband, the signal jumps into the center of your head. As you continue to tune, the signal again moves back to the unprocessed ear. This is a very dramatic effect and makes it very easy to copy a single signal in the presence of other strong signals. I recall reading about this effect 15-20 years ago in a QST article, so perhaps you can go there for a complete explanation of how it works.

Give it a try and see if you don't say "Wow" !

Regarding the V5 upgrade - I must have missed the information about the two-tone test being deleted from the Test function in V5. If you depend on that function to align the carrier point in your TS-850 or similar rig, I suggest you hang onto the old IC for those rare times when you need the two-tone generator.

Anyone else have any comments regarding the V5 upgrade?

Yes, the Computer Control of the MK-V is the same as the 1000MP. Can be controled by lots of interface and logging programs, including Log Windows.

I just ran across some reviews of the FT1000MP Mark V on eham.net and
several folks commented on the ease of setting up the CAT functionality.
I've taken a look at several of the popular CAT programs and none of them
mention the Mark V by name, so I'm guessing that the Mark V uses the same
instruction set as the FT1000MP.

It's amazing how little real information is available on this radio.

Prior to about 20 years ago, so don't use transformer oil that's more than
20 years old. Transformer oil made since then is PCB free, by law. The big
claim to fame of transformer oil is that it has a very high dielectric strength
to withstand the high voltages in the electrical distribution network, up to
80 kV. But we don't have such high voltages in our dummy loads, 1.5 kW
across 50 ohms is just 273 volts. Mineral oil works just fine, and is food
grade non-toxic.

Unfortunately, your memory fails you.

While it isn't politically correct to say so, there is mounting evidence that Europeans were in the New World long before the alleged "Native Americans."

Furthermore, whoever was here "first" was still an "immigrant." There is no fossil evidence whatsoever of any humans evolving in North America or South America. So there are no "Native Americans" or "indigenous people", just a big nation of immigrants, some who are better able to cope than others.

Hi:

If you are into servicing the HT600, P200, MT1000, MTX Series of HT's, you should not be without one of these. This allows the Servicing on the Portable without the Housing, and you have direct access to the PC board.

All one has to do is remove the radio from the housing, and reinstall this base on the bottom, and use your own battery or a battery eleimator. Gets rid of all those dangling wires. If you were to buy from Motorola, they would cost over $50.00

Has the battery contacs, base plate, Mounting Screws.

Picture can be seen @

http://www2.4dcomm.com/metrotech/ht_bjig.jpg

$23.00ea + $6.00 for Pirority Mail, Insured, w/delivery confirmation.

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate shipping is desired) or a Personal / Business check is A-OK too if you do not mind a Short Shipping Delay due to bank processing time. This is required only the first time or two as once you are in the data base, PrePayment is no longer required

On September 21, 2000, Kevin@rollerskate.net stated:

Hi Ron,

And I thought I had seen it all! EVERY ham, regardless of their ethnicity, should be upset.

As we both know, AA is needed in Ham Radio about as much as I need to be hit by a train. If we as hams REALLY need this, then how did I obtain my EXTRA class license in the 70s, before ANY of the standards were lowered?

This AA thought process is strange, at best. I wonder why the author would suggest such an outrageous idea. Most, if not all of the potential amateur radio ops I know, and that are minorities, would be insulted by the mere suggestion. Besides, if the FCC were to lower the standards any further, we might as well have no tests at all!

BTW: My 11 year old daughter has been a ham for almost a year, receiving her ticket when she was only 10. I wonder how she did that without the benefit of the below suggested AA for minorities? Perhaps she studied??? WOW, what a novel idea!

Kevin Williams NI8H/6
Kevin@rollerskate.net
>>

Kevin,

With all due respect, I totally disagree with your argument and its reasoning. You should be very proud of your 11 year old daughter for getting her ticket. I have no doubt that both of you worked very hard for her to attain it; and both of your efforts proved successful. Your scenario makes my best argument. Now, think about the African-Americans in our society, whose ancestors were uprooted from Africa, where they were killed, tortured, turned into slaves, and made the property of white Americans. Think about how they were torn from their familles (especially after they were here as slaves), how they had their culture, language, family, and assets stripped from them. As a result of this, our country's greatest tragedy, generation after generation has been born into poverty, drugs, crime, teenage moms, and single family households. Because of what white America has done in the past and present, African Americans don't have a "fair" chance. If your 11 year old has an African American in her class at school, statistics show that she's probably poor, comes from a single parent family, and has a father who is absent in her life (and probably has had a run-in with the law at some point in his life). As further result of the tragedy set forth upon her by white America, she's probably far behind your daughter in her schooling. In fact, due to white America's actions for the last 300 or so years, many African Americans children have understandably

reacted to the plight bestowed upon them by being afraid to "act white" and study, which subjects them to further injustices. Our obligation is to make all African Americans feel good about themselves and not feel any sense of failure. Just think about all that your 11 year old could gain if more African American children could get there licenses with a scaled back, "neutral" exams which would require only, for instance that they know the frequencies they should be on. (No element 1 and a scaled back element 2). Hopefully, in time they would learn our hobby "on the job" and teach and enjoy it with future generations. I have received several emails asking if I would go to a doctor who hadn't passed a standard medical board exam, or want to be on a plane with a pilot who wasn't tested for flying. I think the tragedies possible when chatting on a microphone about the weather and what kind of rig one has seems to me a lot less worrisome than medicine or flying...it's only rag-chewing folks...what's the big deal???

Hi Fellas;
I have for SALE:
Kenwood TS-830S(gold label) with warc bands, excellent condition, 100 watts out, No Options, copy of the manual.
There is a switch on the back that places the radio on 26 to 28 mhz without disturbing the regular 10 meter band. It came like this and of course you can only listen there because transmitting there is illegal.
The only other thing is that it takesa about 15 or so seconds for the display to light and receiver to come to life, maybe because it has'nt been used in a few years?
Price is $400 ppd conus!

Yes, but at the hands of other blacks - who defeated them in tribal
conflicts and made them slaves and/or sold them to the slave traders...

I have never owned a slave, nor have I ever known one, and neither have you.
Get off this tired, worn out augument - nobody is listening. Everyone who
has the desire to work for what they want will get it. Those that want it
handed to them for free are always going to complain about the acheivements
of others. Do you want some cheese with your whine ?

I'll bet you're just another CB'er who still thinks it's too much work to
get a ticket. To quote a line from a recent Eagles song - "Get Over It" .

Source record: 71504

We'll just have to wait until someone with a basket-case '301 decides to sell the parts piece-meal! I was hoping to find someone on the NG who had some read-out IC's stashed away, but no luck.

BTW, if you're still using an FT-301D as your main rig, you deserve an award! Treat yourself to a new radio, and you'll be amazed how much they have improved since 1977. No drift. No pre-selector tuning. No re-calibrating when changing bands or modes. Better front-ends. Better AGC. DSP. FSK. FM. General coverage receive, IF shift, built-in keyers, 100+ memory channels (no xtals to buy!), Xmit monitor. External computer control. Some with 6 meters and above, --and all for about the same number of dollars as the '301, NOT adjusted for inflation!

If you ever decide to "part-out" your old rig, drop a note on the News Group here, and you'll probably get a lot of response...

1271. Re: Ever heard of a N.C.G. HF transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-22 03:20:12 UTC
From: Dick Carroll <dixie@townsqr.com>
Message-ID: <8qej5cajn0@208.207.71.137>
Source record: 71507

The NCG model 10-160 allband HF transciever, built by the National Communications Group in Japan, was marketed on this side of the pond for a fairly short time in the middle 80's. Not many were sold evidently, as they seem to be rare. I bought the only one I ever saw, used, at a hamfest several years ago, used it a bit, then turned it over to my son-in-law who was a new ham . He still has it and the manual. They live in a western state. I use it on the air when we visit them.
The rig has a builtin 120VAC switchmode power supply, has 100 watts output (the quoted 250 watts is incorrect) has digital frequency readout to .1khz, is fully
PLL synthesized and in general is a very good solid, compact stable and so far, reliable piece of gear.
It does NOT have a builtin antenna tuner. We use an MFJ manual tuner with it.
There won't be a company website that shows it, NCG doesn't make ham gear these days. I think the competetion was a bit too stiff. At that time they simultaneously built a 15 meter singlebander.
I'd buy another if the price was right.

1273. FS - Yaesu, Kenwood & ICOM Transceivers

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-22 03:47:14 UTC
From: George Runyan <geor@flash.net>
Message-ID: <6DAy5.5143$864.248018@news.flash.net>
Source record: 71508

I have three nice transceivers in excellent working order. The Yaesu is an 8 and the ICOM is a 9 cosmetically. The Kenwood is a 7. All three have manuals.

ICOM 751A with built in AC supply SP-3 speaker, SM-8 mike & HM 36 mike, mobile mount. Take all for $600.00 + shipping.

Yaesu 101ZD 160-10 including the WARC bands. 140 watts output. Asking $275.00 + shipping.

Kenwood 130S comes with mobile mount, mike, DC cord. Asking $325.00 + shipping.

TM-631A 144/220 MHz mobile with bracket, manual. $375

TS-520SE HF transceiver, 100 Watts, manual copy. $275

MC-60 microphone, dual impedance, up/down sw., preamplifier, with cable $80

Yaesu Landliner telephone patch and external speaker, manual $75

Trades considered. Add shipping cost from Los Angeles area.

1275. HELP WITH RECEIVING WEATHER DATA

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-23 00:00:00 UTC
From: n9mxt1@aol.com
Message-ID: <20000923164613.04650.00000436@ng-bk1.aol.com>
Source record: 71398

Hello,
I have a Tandy 300bd modem here and I want to start decoding the weather data from a local simplex frequency here. Its not WEFAX its start TEXT. I already have the modem wired to my radio and the RS232 cable to the CPU. However I receive nothing as of yet. I am using Hyperterm for the terminal program. Can anyone please tell me what I am doing wrong because I am not receiving anything on my screen.

If you know anything please drop me an EMAIL n9mxt1@aol.com

Thanks and hope to hear from someone soon.

Jeffrey

Had one di not like it. Easy to program most functions were intuitive. Ok
on 2 meters and police freq. (150-160mhz). Not sensitive enough for good
reception any where else. The AOR is a super rig however it is a bit pricy.
You pay your money and you take your chances. Good luck. Ed KC4FD

Hi Wes,

It would appear from your message below that you have reason to believe that I AGREE with the man who asserted that AA was needed in Ham Radio.

In fact, I have written just the opposite and I strongly oppose the idea.

Please re-read my response to the original post. It will clearly show my position. (It may be listed under my wife's e-mail address of laura@rollerskate.net).

Thanks,

Kevin Williams NI8H/6

Some more suggested reading for you.

Try: "Bonded Passengers to America" ISBN 0-8063-0997-7.

A casual perusal will quickly show that blacks were not the only people "uprooted" and "killed, tortured, and turned into slaves." Many, many English
and Irishmen were sent to this country as "bonded" (read "slave") laborers.

Often, they had been charged with the pettiest of crimes and were sentenced to
servitude in the colonies. "Contractors" who used the same ships as were used

to transport Africans often transported them. The difference was that the survival rate for Africans was higher than it was for the English.

Many of these criminals stayed in America after their sentences were completed
and became the bedrock founders of this society.

Damned near every ethnic group that has come to this country en mass for reasons
of famine, economic hardship or strife in their home countries have been subjected to unwelcome discrimination. The Irish, Poles, Italians, Jews, Chinese, Koreans, Vietnamese, you name it, have all had their turn in the barrel.

Certainly blacks have suffered in this country but so have the other ethnic groups. We have unprecedented numbers of foreigners trying to get into this country, even at the risk of their lives. They look at America like a kid looking through the window of a candy store. They just want to get in so they
can partake of the goodies. And yet we have a group still complaining about how
their ancestors arrived 300 years ago.

Blacks should do what every other American does when he sees a mess; get a broom, a mop and a bucket and get to work cleaning it up. It's only "fair."

Since you're posting to three ham radio newsgroups, and want to buy a
ham radio, how about posting your ham radio callsign? Or are you
seeking this radio so you can use it illegally in another radio service?

For example, since the 2510 is so easily modified, and is very popular
with CB'ers who, in addition to talking on the CB channels, like to talk
on frequencies outside of the CB band (such as those in the neighboring
10-meter ham band). Is that what you intend to do when you receive this radio?

There is a growing body of evidence of pre-Columbian visitation of the New World. Certainly the Vikings have claims that pre-date Columbus. But there is also evidence that Africans may have reached the Americas before the Europeans. There is evidence of ancient tin mining in Michigan that bears the characteristics of Egyptian work for example. The similarity of ancient monumental architecture in Central and South America to North African monumental architecture is also indicative of some contact in pre-Columbian times.

But the Asiatics who became the New World "Indians" crossed into the Americas about 12,000 years ago across the Bering land bridge. That's considerably earlier than any European or African peoples demonstrated any sea going capabilities.

I've never owned one...probably one of the few I haven't played with. I read a review that claimed it's sensitivity was impaired in the 800MHz band, due to Yaesu's attempts to meet the government's demand for blocking cellular. They also blocked a little more than the cellular range, in the process. I know someone who owns an un-blocked unit, he purchased from Bandercom, and he's very satisfied with it, other than the fact it lacks trunking.

It seems there has been several of them up for sale, that claim to be only a couple weeks old too. Are users that unsatisfied, that quickly, or just trying to make them sound a little newer than they actually are?

It does have some attractive features, that can't be denied!

I found a service bulletin on Compuserve. (Anyone know if ICOM bulletins are on the web? I couldn't find them.) Here's what they say:

Symptom: Frequency instability.
Probable Cause: Unstable plastic trimmer capacitor C138 on PL unit.
Cure: Replace C138 with a ceramic equivalent. We also recommend replacing the HPL trimmers at this time.

(HPL trimmers are C37, C45, C52, and C59.)

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-23 00:00:00 UTC
From: Floyd Sense <sentek@sprintmail.com>
Message-ID: <inqpsscui3pms45l8dk794r1a219v8ekdn@4ax.com>
Source record: 71493

Well, don't know anything about earlier models - this 599zx is the
only one I've had and have been using it for a couple of years now. I
just tried running it as you mentioned, with transceiver AGC off. If
I set the transceiver volume level to a point where the 599 overload
LED doesn't come on with strong signals, and control the speaker
volume with 599 gain control, I don't have any problems getting enough
range. The nice thing is that you can turn on the AGC on the 599 and
it brings up the weaker signals as well. I guess then the question is
whether or not the 599 has enough audio output to drive your speaker
configuration to adequate level.

The documentation that came with the V5 upgrade made no mention of any
improvements in the dr area, so have to assume that hasn't changed.

Hello...I am normally not the type of person to post 'Good Guy Alerts'. I feel that it is a bit ridiculous to pat someone on the back just for doing something that's expected of them (i.e. Following thru on a deal and representing what they have for sale in a fair and accurate manner), however...I read some negative posts regarding John Anderson, AC5TX, on the NG's just as I was in the middle of negotiations to buy a rig from him. I expressed my concerns about dealing with him after reading these negative postings. He offered me an adequate explanation and I went ahead and sent him the money via PayPal. The rig arrived extremely quickly, very well packed, but there was a knob that was damaged on the rig. I contacted John, who offered to make it right or take the rig back. He sent me $75 to compensate for the bent POT on the rig. I must say that he has gone above and beyond, and I would just like to post this 'positive' in hopes of counter-acting the negatives that I read about him earlier here...

1307. FT-990 Meter Light Installation?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-23 00:00:00 UTC
From: BHL <philoxeny@hotmail.com>
Message-ID: <aJ6z5.557$iq.86036@news7.onvoy.net>
Source record: 71495

I ordered and received a new meter light for my FT-990. It has a blue thin rubber like sleeve on it. The sleeve does not extend over the contact ends, its just over the center bulb glass area. The bulb that was in the radio did not have this sleeve. Is this just a protection till it gets installed or is it left on there and the old one in my radio just burned off or someone just removed it prior to installation? The bulb looks exactly like a standard 3AG fuse. So, do I leave the blue rubber sleeve on or exacto it off before
installing? Tnx, BHL philoxeny@hotmail.com Or answer here.

1308. Re: What kind of Oil to Use in a Dummy Load?

Richard Miles <k7rnz@worldnet.att.net>
shared these priceless pearls of wisdom:

->Mineral oil does not have the heat conduction properties of transformer oil
->and you should use it only as a last resort. I would not consider motor
->oil even as an option.

Well, you seem to be quite sure of yourself, so I know you won't mind posting the data for thermal conductivity of transformer oil and mineral oil so we can all see for ourselves the relative "goodness" of one versus the other.

Since I'm sure you know where to find this data (hint, the initials are CRC), I'll be glad to post the data for automatic transmission fluid from the same source as an addendum to your data. We can then do the calculation for all to see just how much hotter the load gets with your "transformer oil" than with ATF. Less than a buck a quart at Kragens or Kmart. Red, to check for leaks.

I'll even do the math for you to examine.

Well, thanx , Floyd. Maybe I can borrow one locally to see. I like to get down in the mud on 40 and sometimes 80, where my small antennas limit what I can hear. The older dsps worked okay as far selectivity was concerned -- the difference between R2 and R3 to R5, when compared to the 270Hz i-f rock filter. Since I use cans most of the time, I imagine that the 'zx would have enough audio.

Thanx again.

Use transformer oil. Contact your local utility and see if you can buy, bum or whatever it takes to negotiate for a gallon. Also most oil and industrial lubricant distribution companies stock it. Anything you buy new today will be free of PCB's so that is no longer a concern.

Mineral oil does not have the heat conduction properties of transformer oil and you should use it only as a last resort. I would not consider motor oil even as an option.

No, our "ecologically aware" friend can't buy those either. The United States
sponsors whale hunts too. Most recently, the US government has given the
Makah Indians $322,000 to start hunting minke whales again (with a take of
9 per year), and has continued to support hunts by other native populations.
The US also supported the IWC treaty provisions that allow the Japanese and
the Norwegians to continue whaling at a controlled pace.

But not to worry, our "ecologically aware" friend can go ahead and buy that
Kenwood he has his eye on. It isn't made in Japan. Kenwood makes those
on mainland China now. The Chinese don't kill whales, just people. That
should be totally compatible with our "ecologically aware" friend's beliefs.

(Scratch an "environmental activist" deeply enough, and there's usually a strong anti-human agenda under there somewhere.)

BTW whale populations have about doubled in the past 15 years (since the 1986 treaty), moving several species off the "endangered" list. Under that treaty, the IWC regulates worldwide whale harvesting. In the proximate case, the Japanese are permitted to harvest 90 per year. They in fact only harvested 88 this year. That is not a threat to whale populations, which as noted have been growing vigorously while the Japanese, Norwegians, and others have been practicing controlled harvests.

If whale populations were declining, outrage might be justified, but they aren't. IWC management practices are working. And they are working primarily because it is in the economic interests of those involved in whaling to make them work. Current market value of a minke whale is about half a million dollars. Before controls, they were worth only about twenty thousand. So it makes economic sense to go along with the IWC management plans. (Artificially maintained market scarcity works to drive up prices. It is an old trick, long practiced by the diamond cartel, and lately by OPEC.)

Sencore Transistor and Rectifier Checker, Model TRC-4

4 1/2 in. Wide x 5 in. High x 2 in. Deep
Checks PNP, NPN, and diodes.
Checks leakage when connected to transistor and you push button for DC gain test
Has gain set pot for accurate measurements
Tests High Power transistors as well as Small Signal transistors
Power source is 4 standard 1.5V AA batteries internal
Socket on front panel plus three 15 inch long leads (blk, red, yel) with clips on end.
Complete operating instruction manual included which fits on back of unit.
Physical condition is very good with a few scratches on side but very clean front panel
.JPG picture sent upon request.
Only $20 which includes shipping to your front door.

Charles, do you realise how many personal ham radio related web sites
there are? There are many hundreds of them on the QSL.NET server alone.
Have you thought what would happen if every ham with a web page posted
an advertisement for it in half a dozen of the major ham radio newsgroups?

I certainly hope this nonsense does not become a trend. I would
certainly hate to look through a few hundred web page advertisements
everytime I opened this newsgroup.

You'll have to ignore him, or complain to his ISP. He's crazy, this
is all the life he has, and since that implies running roughshod over
manners and custom, that's what he's going to do.

It sounds like you've had some experience with guy in the past. I
don't know him, so I didn't want to make a major issue out this.
Instead, I was hoping an appeal for restraint would be enough (if not
for him, then for the others reading this thread - who might get the
idea to copy him by posting a message about their own web page).

I just hit the delete key now anytime I see his call in the header information. He posts this crap every ten days in hopes of the uninformed clicking on his web site. Apparently he makes a buck every time someone makes the mistake. He just doesn't get it. There just aren't that many new subscribers to these news groups in any given month, and once you've seen his page, well, you've seen it. You don't want to book mark it, so he is essentially just preaching to the choir and taking up space and time in the process. If he would just once post a serious question on some topic, or answer someone's question with a studied answer I might take him seriously, but I just know that he is vulgar and shallow.

Ah, I didn't know he was a routine newsgroup spammer. I'm especially glad I didn't visit his web site now. Of course, I don't tend to visit many personal web sites unless I know the person, or I'm having a conversation with that person in a newsgroup.

I have 3 Motorola MU21CV Spirit radios for sale cheap.

I got them from a radio surplus store, and my intention was to use them for 9.6k packet, but have procured other radios to use since.

They are currently crystaled for a (same) business freq, and work fine. All come with rubber-duck antennas, PL, belt clips, and fresh ni-cads.

Only have 2 chargers though.

Can see complete specs at "http://www.dynadirect.com/ac-mu21cv.html"

Make offer.

Thanks, and 73.

I did the 1000D S meter light and it did not have the sleeve on it. I would suspect that the sleeve is for transportation protection. My lamp did not actually burn out but became internally coated resulting in very low output.

Nobody could be so dumb as not to realize that you have advertised your
web page about a hundred times in the past two weeks and you chastise
Charles for advertising his one time? Your one line per post has
taken up twenty times as much bandwidth as his single post.

1360. AR-88D Troubleshooting Help

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-24 00:00:00 UTC
From: Terry Brown <terry.brown6@att.net>
Message-ID: <39CE90CA.AB093509@att.net>
Source record: 71444

I've been cleaning up an AR88 I recently found and fired it up last weekend (slowly over 24 hours with a Variac). When I reached about 90v.

it began to play and I listened to it all day Sunday. I shut it down for the night. I turned it on again Monday and I get no signals. I have audio but no sigs.
I tested the tubes and they all appear fine. I replaced all the bathtub caps (some were leaking) with new Orange Drops but nothing has changed. Anyone have any ideas what to look for? I readily admit I'm a

rookie but would love to learn how to troubleshoot. I only have a multimeter, a frequency meter and a signal generator to use as test equipment. Thanks.
Terry (KA5IHV)

Message:

READING THIS COULD CHANGE YOUR LIFE! I found this=20
on a=20
bulletin board and decided to try it. A little while back, I was =
browsing=20
through newsgroups, just like you are now, and came across an article=20
similar to this that said you could make thousands of dollars within=20
weeks with only an initial investment of $6.00! So I thought, "Yeah=20
right, this must be a scam", but like most of us, I was curious, so I =
kept=20
reading. Anyway, it said that you send $1.00 to each of the 6 names=20
and address stated in the article. You then place your own name and=20
address in the bottom of the list at #6, and post the article in at =
least=20
200 newsgroups. (There are thousands) No catch, that was it. So after=20
thinking it over, and talking to a few people first, I thought about =
trying=20
it. I figured: "what have I got to lose except 6 stamps and $6.00, =
right?"=20
Then I invested the measly $6.00. Well GUESS WHAT!!...within 7=20
days, I started getting money in the mail! I was shocked! I figured it=20
would end soon, but the money just kept coming in. In my first week, I=20
made about $25.00. By the end of the second week I had made a total=20
of over $1,000.00! In the third week I had over $10,000.00 and it's =
still
growing. This is now my fourth week and I have made a total of just=20
over $42,000.00 and it still coming in rapidly. It's certainly worth=20
$6.00, & 6 stamps, I have spent more than that on the lottery!! Let me=20
tell you how=20
this works and most importantly, why it works....Also, make sure you=20
print a copy of this article NOW, so you can get the information off of=20
it as you need it. I promise you that if you follow the directions =
exactly,=20
```

that you will start making more money than you thought possible by=20
doing something so easy! Suggestion: Read this entire message=20
carefully! (print it out or download it.) Follow the simple directions =
and=20
watch the money come in! It's easy. It's legal. And, your investment is=20
only $6.00 (Plus postage) IMPORTANT:=20
This is not a rip-off; it is not indecent; it is not illegal; and it is =
virtually=20
no risk - it really works!!!! If all of the following instructions are=20
adhered to, you will
receive extraordinary dividends. PLEASE NOTE: Please follow these
directions EXACTLY, and $50,000 or more can be yours in 20 to 60=20
days. This program remains successful because of the honesty and=20
integrity of the participants. Please continue its success by carefully=20
adhering to the instructions. You will now become part of the Mail=20
Order business. In this business your product is not solid and tangible, =

it's a service. You=20
are in the business of developing Mailing Lists. Many large=20
corporations are happy to pay big bucks for quality lists. However,=20
the money made from the
mailing lists is secondary to the income which is made from people=20
like you and me asking to be included in that list. Here are the 4 easy=20
steps to success: STEP 1: Get 6 separate pieces of paper and write the=20
following on each piece of paper "PLEASE PUT ME ON YOUR=20
MAILING LIST." Now get 6 US $1.00 bills and place ONE inside=20
EACH of the 6 pieces of paper so the bill will not be seen through the=20
envelope (to prevent thievery). Next, place one paper in each of the 6=20
envelopes and seal them. You should now have 6 sealed envelopes,=20
each with a piece of paper stating the above phrase, your name and=20
address, and a $1.00 bill. What you are doing is creating a service.=20
THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate=20
service and you are paying for it! Like most of us I was a little=20
skeptical and a little worried about the legal aspects of it all. So I=20
checked it out with the U.S. Post Office (1-800-725-2161) and they=20
confirmed that it is indeed legal! Mail the 6 envelopes to the following =

addresses:

#1) Samantha Blizniak, 7937 S. Newcastle, Burbank, IL 60459

#2)Katie Wiess, 14 White Tail Lane, Wallingford, CT 06492

#3)Traci Wood, 4224 Carnwath Rd., Tallahassee, FL 32303

#4)Milissa Crook, 3730 South 255th Place, Kent, WA 98032

#5)James Buckner, 11903 Coit RD. #1803 Dallas, TX 75251

#6)Bobbi Mullins, 31 Sunnydale Lane, Napoleon, OH 43545

STEP 2: Now take the #1 name off the list that you see above, move=20
the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR=20

Name as number 6 on the list. STEP 3: Change anything you need to,=20
but try to keep this article as close to original as possible. Now, post =

your amended article to at least 200 newsgroups. (I think there are=20
close to 24,000 groups) All you need is 200, but remember, the more=20
you post, the more money you make! This is perfectly legal! If you=20
have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal=20
lottery laws. Keep a copy of these steps for yourself and, whenever=20
you need money, you can use it again, and again. PLEASE
REMEMBER that this program remains successful because of the=20
honesty & integrity of the participants & by their carefully adhering to =

the directions. Look at it this way. If you are of integrity, the =
program=20
will continue and the money that so many others have received will=20
come your way. NOTE: You may want to retain every name and=20
address sent to you, either on a computer or hard copy and keep the=20
notes people send you. This VERIFIES that you are truly providing a=20
service. (Also, it might be a good idea to wrap the $1 bill in dark =
paper=20
to reduce the risk of mail theft.) So, as each post is downloaded and =
the=20
directions carefully followed, six members will be reimbursed for their=20
participation as a List Developer with one dollar each. Your name will=20
move up the list geometrically so that when your name reaches the #1=20
position you will be receiving thousands of dollars in CASH!!! What an=20
opportunity for only $6.00 ($1.00 for each of the first six=20
people listed above) Send it now, add your own name to the list and=20
you're in business!=20
---DIRECTIONS -----=20
FOR HOW TO POST TO NEWSGROUPS----------=20
Step 1) You do not need to re-type this entire letter to do your own=20
posting. Simply put your cursor at the beginning of this letter and drag =

your cursor to the bottom of this document, and select 'copy' from the=20
edit menu. This will copy the entire letter into the computer's memory.
Step 2) Open a blank 'notepad' file and place your cursor at the top of=20
the blank page. From the 'edit' menu select 'paste'. This will paste a=20
copy of the letter into notepad so that you can add your name to the
list.=20
Step 3) Save your new notepad file as a .txt file. If you want to do =
your=20
postings in different settings, you'll always have this file to go back =
to.=20
Step 4) Use Netscape or Internet explorer and try searching for various=20
newsgroups (on-line forums, message boards, chat sites, discussions.)
Step 5) Visit these message boards and post this article as a new=20
message by highlighting the text of this letter and selecting paste from =

the edit menu. Fill in the Subject, this will be the header that =
everyone=20

sees as they scroll through the list of postings in a particular group,
click the post message button. You're done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to different=20
newsgroups and post away, after you get the hang of it, it will take=20
about 30 seconds for each newsgroup! **REMEMBER, THE MORE=20
NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL=20
MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** That's=20
it! You will begin receiving money from around the world within days!=20
You may eventually want to rent a P.O.Box due to the large amount of=20
mail you will receive. If you wish to stay anonymous, you can invent a=20
name to use, as long as the postman will deliver it. **JUST MAKE
SURE ALL THE ADDRESSES ARE=20
CORRECT.** Now the WHY part: Out of 200 postings, say I receive=20
only 5 replies (a very low example). So then I made $5.00 with my
name at #6 on the letter. Now, each of the 5 persons who just sent me=20
$1.00 make the MINIMUM 200 postings, each with my name at #5=20
and only 5 persons respond to each of the original 5, that is another=20
$25.00 for me, now those 25 each make 200 MINIMUM posts with=20
my name at #4 and only 5 replies each, I will bring in an additional=20
$125.00! Now, those 125 persons turn around and post the MINIMUM=20
200 with my name at #3 and only receive 5 replies each, I will make an=20
additional $626.00! OK, now here is the fun part, each of those 625=20
persons post a MINIMUM 200 letters with my name at #2 and they=20
each only receive 5 replies, that just made me $3,125.00!!!=20
Those 3,125 persons will all deliver this message to 200 newsgroups
with my name at #1 and if still 5 persons per 200 newsgroups react I=20
will receive $15,625,00! With an original investment of only $6.00!=20
AMAZING! When your name is no longer on the list, you just take the=20
latest posting in the newsgroups, and send out another $6.00 to names=20
on the list, putting your name at number 6 again. And start posting=20
again. The thing to remember is: do you realize that thousands of=20
people all over the world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!! So, can you afford
$6.00 and see if it really works?? I think so... People have said, "what
if the plan is played out and no one sends you the money? So what!
What are the chances of that happening when there are tons of new
honest users and new honest people who are joining the internet and
newsgroups everyday and are willing to give it a try? Estimates are at=20
20,000 to 50,000 new users, every day, with thousands of those
joining the actual internet.Remember, play FAIRLY and HONESTLY
and this will really work

it. I=20
promise you that if you follow the directions exactly,
that you will start making more money than you =
thought=20
possible by
doing something so =
easy!=20
Suggestion: Read this entire message
carefully! (print it out or download it.) Follow the simple =
directions=20
and
watch the money come in! It's =
easy. It's=20
legal. And, your investment is
only $6.00=20
(Plus postage) IMPORTANT:
This is =
not a=20
rip-off; it is not indecent; it is not illegal; and it is virtually=20

no risk - it really works!!!! If =
all of the=20
following instructions are
adhered to, you=20
will
receive extraordinary =
dividends. PLEASE=20
NOTE: Please follow these
directions EXACTLY,=20
and $50,000 or more can be yours in 20 to 60

days. This program remains successful because of the honesty =
and=20

integrity of the participants. =
Please=20
continue its success by carefully
adhering to=20
the instructions. You will now become part of the Mail
Order business. In this business your product is =
not solid and=20
tangible,
it's a service. You=20

are in the business of developing =
Mailing=20
Lists. Many large
corporations =
are happy to=20
pay big bucks for quality lists. However,
the=20
money made from the
mailing lists =
is secondary=20
to the income which is made from people
like=20
you and me asking to be included in that list. Here are the 4 easy=20

steps to success: STEP 1: Get 6 =
separate=20
pieces of paper and write the
following on=20
each piece of paper "PLEASE PUT ME ON YOUR
MAILING LIST." Now get 6 US $1.00 bills and place ONE inside=20

EACH of the 6 pieces of paper so =
the bill=20
will not be seen through the
envelope (to=20
prevent thievery). Next, place one paper in each of the 6 =

envelopes and seal them. You should now have 6 =
sealed=20
envelopes,
each with a piece of =
paper stating=20
the above phrase, your name and
address, and=20
a $1.00 bill. What you are doing is creating a service.
THIS IS ABSOLUTELY LEGAL! You are requesting a =
legitimate=20

service and you are paying for =
it! Like most=20
of us I was a little
skeptical =
and a little=20
worried about the legal aspects of it all. So I
checked it out with the U.S. Post Office (1-800-725-2161) and =
they=20

confirmed that it is indeed =
legal! Mail the 6=20
envelopes to the following
addresses:

#1) =
Samantha Blizniak,=20
7937 S. Newcastle, Burbank, IL 60459

#2)Katie Wiess, 14 White Tail Lane, Wallingford, CT=20
06492

#3)Traci Wood, 4224 =
Carnwath Rd.,=20
Tallahassee, FL 32303

#4)Milissa Crook, 3730 South 255th =

WA 98032

#5)James Buckner, =
11903 Coit RD.=20
#1803 Dallas, TX 75251

#6)Bobbi Mullins, 31 Sunnydale Lane, Napoleon, OH =
43545

STEP 2: Now take the #1 name off the list that you =
see above,=20
move
the other names up (6 =
becomes 5, 5=20
becomes 4, etc...) and add YOUR
Name as=20
number 6 on the list. STEP 3: Change anything you need to, =

but try to keep this article as close to original =
as possible.=20
Now, post
your amended article to =
at least=20
200 newsgroups. (I think there are
close to=20
24,000 groups) All you need is 200, but remember, the more =

you post, the more money you make! This is =
perfectly legal! If=20
you
have any doubts, refer to =
Title 18 Sec.=20
1302 & 1341 of the Postal
lottery laws.=20
Keep a copy of these steps for yourself and, whenever
you need money, you can use it again, and again.=20
PLEASE
REMEMBER that this program =
remains=20
successful because of the
honesty =
&=20
integrity of the participants & by their carefully adhering to=20

the directions. Look at it this =
way. If you=20
are of integrity, the program
will continue=20
and the money that so many others have received will
come your way. NOTE: You may want to retain every name and=20

address sent to you, either on a =
computer or=20
hard copy and keep the
notes =
people send you.=20
This VERIFIES that you are truly providing a
service. (Also, it might be a good idea to wrap the $1 bill in =
dark paper=20

to reduce the risk of mail =
theft.) So, as=20
each post is downloaded and the
directions=20
carefully followed, six members will be reimbursed for their =

participation as a List Developer with one dollar =
each. Your=20
name will
move up the list =
geometrically so=20
that when your name reaches the #1
position=20
you will be receiving thousands of dollars in CASH!!! What an =

opportunity for only $6.00 ($1.00 for each of the =
first six=20

people listed above) Send it now, =
add your=20

own name to the list and
you're =
in business!=20

---DIRECTIONS ----- =

FOR HOW TO POST TO NEWSGROUPS---------- =

Step 1) You do not need to re-type this entire =
letter to do=20
your own
posting. Simply put your =
cursor at=20
the beginning of this letter and drag
your=20
cursor to the bottom of this document, and select 'copy' from the=20

edit menu. This will copy the =
entire letter=20
into the computer's memory.
Step =
2) Open a=20
blank 'notepad' file and place your cursor at the top of =

the blank page. From the 'edit' menu select =
'paste'. This will=20
paste a
copy of the letter into =
notepad so=20
that you can add your name to the
list.=20

Step 3) Save your new notepad =
file as a .txt=20
file. If you want to do your
postings in=20
different settings, you'll always have this file to go back to. =

Step 4) Use Netscape or Internet explorer and try =
searching=20
for various
newsgroups (on-line =
forums,=20
message boards, chat sites, discussions.)
Step=20
5) Visit these message boards and post this article as a new =

message by highlighting the text of this letter =
and selecting=20
paste from
the edit menu. Fill in =
the=20
Subject, this will be the header that everyone

sees as they scroll through the list of postings in a =
particular=20
group,
click the post message =
button. You're=20
done with your first one!
Congratulations...THAT'S IT! All you have to do is jump to =
different=20

newsgroups and post away, after =
you get the=20
hang of it, it will take
about 30 =
seconds for=20
each newsgroup! **REMEMBER, THE MORE
NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL =

MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200** =
That's=20

it! You will begin receiving =
money from=20
around the world within days!
You =
may=20
eventually want to rent a P.O.Box due to the large amount of =

mail you will receive. If you wish to stay =
anonymous, you can=20
invent a
name to use, as long as =
the postman=20
will deliver it. **JUST MAKE
SURE =
ALL THE=20
ADDRESSES ARE
CORRECT.** Now the =
WHY part:=20
Out of 200 postings, say I receive
only 5=20
replies (a very low example). So then I made $5.00 with =
my
name at #6 on the letter. Now, each of the 5 =
persons who just=20
sent me
$1.00 make the MINIMUM =
200 postings,=20
each with my name at #5
and only =
5 persons=20
respond to each of the original 5, that is another

$25.00 for me, now those 25 each make 200 MINIMUM posts with=20

my name at #4 and only 5 replies =
each, I will=20
bring in an additional
$125.00! =
Now, those=20
125 persons turn around and post the MINIMUM
200 with my name at #3 and only receive 5 replies each, I will =
make an=20

additional $626.00! OK, now here =
is the fun=20
part, each of those 625
persons =
post a=20
MINIMUM 200 letters with my name at #2 and they
each only receive 5 replies, that just made me $3,125.00!!!=20

Those 3,125 persons will all =
deliver this=20
message to 200 newsgroups
with my =
name at #1=20
and if still 5 persons per 200 newsgroups react I
will receive $15,625,00! With an original investment of only =
$6.00!=20

AMAZING! When your name is no =
longer on the=20
list, you just take the
latest =
posting in the=20
newsgroups, and send out another $6.00 to names
on the list, putting your name at number 6 again. And start =
posting=20

again. The thing to remember is: =
do you=20
realize that thousands of
people =
all over the=20
world are joining the internet and reading these
articles everyday?, JUST LIKE YOU are now!! So, can you=20
afford
$6.00 and see if it really =
works?? I=20
think so... People have said, "what
if the=20
plan is played out and no one sends you the money? So =
what!
What are the chances of that happening when there =

```
are tons of=20
new
honest users and new honest =
people who are=20
joining the internet and
newsgroups everyday=20
and are willing to give it a try? Estimates are at
20,000 to 50,000 new users, every day, with thousands of=20
those
joining the actual =
internet.Remember,=20
play FAIRLY and HONESTLY
and this =
will really=20
work

------=_NextPart_000_0005_01C02599.3B1304A0--

1366. FT-990 Meter Light Installation

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-24 00:56:49 UTC
From: BHL <philoxeny@hotmail.com>
Message-ID: <ljcz5.572$iq.86714@news7.onvoy.net>
Source record: 71406

I ordered and received a new meter light for my FT-990. It has a blue thin rubber like sleeve on it. The sleeve does not extend over the contact ends, its just over the center bulb glass area. The bulb that was in the radio did not have this sleeve. Is this just a protection till it gets installed or is it left on there and the old one in my radio just burned off or someone just removed it prior to installation? The bulb looks exactly like a standard 3AG fuse. So, do I leave the blue rubber sleeve on or exacto it off before
installing? Tnx, BHL philoxeny@hotmail.com Or answer here.

1375. FS: GPS antennas, Still a few left, Going Fast!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-25 00:00:00 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39CE9604.E588D601@home.com>
Source record: 71359

I have for sale a bunch of these real neat GPS antennas. Please check out the 3 pictures for full information. Some have red gaskets, some have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

The vote is still out on that. A group of French archeologists excavating caves in So. America have recently uncovered convincing evidence that the Americas, or at least So. America, were widely populated by 1000s, perhaps millions of Africans whose ancestors, they postulate, were carried here accidentally by wind and currents over the millenia. Where did they go? Their cave paintings indicate that the asiatics who came later killed them all! Sic semper sumpin.

FS: Knwd TM-621A 2m/220 mobile, has crossband repeater
function, includes mike but no mounting bracket. Excellent
working condition, but only "good" cosmetic condition.
For those who aren't aware, this unit has TWO antenna
connectors, one for 2m and the other for 220.

Asking $250 plus shipping. The unit is in storage; when i
get a firm offer for this i will go get it out of storage.
We're talking about a turnaround time of a week here.

Also, i need a phone number to call you collect; the approx.
cost of the call will be deducted from the shipping cost.

I will ask buyer to mail me a money order (no checks) for
$25, then i will ship U.S. Mail COD for the balance. I have
sold items this way before and it went just fine. (Alternative
is pickup in Salinas CA.)

_____=
____________
Attention!! This is not a scam, this is the real deal--this is money in =
your pocket!
Note: I made the $6 leap of faith and it is paying off big time! You =
should too.
Just read what is below and see for yourself. This will change your =
life:

$6 Investment to make $1000s

: Make A Lot Of Money Fast !!!!!

:=20
: A while back, I was browsing newsgroups, just like you, I came across =
an article similar to this that said you could make thousands of CASH =
within weeks with only an initial investment of $6.00 plus stamps! So I =
thought, "Yeah, right, this must be a scam!" But like most of us I was =
curious and kept reading. It said that if you send $1.00 to each of the =
6 names and addresses listed in the article, you could make thousands in =
a very short period of time. You then place your own name and address at =
the bottom of the list at #6, and post the article to at least 300 =
newsgroups. (There are about 32,000 of them out there and that's quite a =
large market pool). No catch, that was it. Even though the investment =
was a measly $6, I had three questions that needed to be answered before =
I could get involved in this sort of thing.=20

: 1. IS THIS REALLY LEGAL? I called a lawyer first. The lawyer was a =
little sceptical that I would actually make any CASH but he said it WAS =
LEGAL if I wanted to try it. I told him it sounded a lot like a chain =
letter but the details of the system (SEE BELOW) actually made it a =
legitimate legal business.=20

: 2. IS OK WITH THE POST OFFICE OR IS IT MAIL FRAUD? I called them: =
1-800-725-2161 and they confirmed THIS IS ABSOLUTELY LEGAL! (See 18, h =
sections1302 NS 1341 of Postal Lottery Laws). This clarifies the program =
of collecting names and addresses for a mailing list.=20

: 3. IS IT RIGHT? Well, everyone who sends me a buck has a good chance =
of getting A LOT of CASH ... a much better chance than buying a lottery =
```

ticket!!! So, having these questions answered, I invested EXACTLY $7.92 =
... six $1.00 bills and six 32 cent postage stamps ... and boy am I glad =
I did!!! Within 7 days, I started getting CASH in the mail! I was =
shocked! I figured it would end soon and didn't give it another thought. =
But the CASH continued coming in. In my first week I made between $20 to =
$30. By the end of the second week I had a made a total of $1,000.00. In =
the third week I had over $10,000.00 and it was still growing. This is =
now my fourth week and I have made a total of just over $42,000 and it's =
still coming in...=20

: It's certainly worth $6.00 and 6 stamps !!! Also, make sure you print =
a copy of this article NOW, so you can get the information off of it as =
you need it. I promise you that if you follow the directions exactly, =
that you will start making more CASH than you thought possible by doing =
something so easy! Suggestion: Read this entire message carefully! =
(print it out or download it.) Follow the simple directions and watch =
the CASH come in! It's easy. It's legal. And, your investment is only =
$6.00 (Plus postage) IMPORTANT: This is not a rip-off; it is not =
indecent; it is not illegal; and it is virtually no risk - it really =
works!!!! If all of the following instructions are adhered to, you will =
receive extraordinary dividends.=20

: PLEASE NOTE: Please follow these directions EXACTLY, and $50,000 or =
more can be yours in 20 to 60 days. This program remains successful =
because of the honesty and integrity of the participants. Please =
continue its success by carefully adhering to the instructions. You will =
now become part of the Mail Order business. In this business your =
product is not solid and tangible, it's a service. You are in the =
business of developing Mailing Lists. Many large corporations are happy =
to pay big bucks for quality lists. However, the CASH made from the =
mailing lists is secondary to the income which is made from people like =
you and me asking to be included in that list.=20

: Here are the 4 easy steps to success:=20

: STEP 1: Get 6 separate pieces of paper and write the following on each =
piece of paper "PLEASE PUT ME ON YOUR MAILING LIST." Now get 6 US $1.00 =
bills and place ONE inside EACH of the 6 pieces of paper so the bill =
will not be seen through the envelope (to prevent thievery). Place one =
paper in each of the 6 envelopes and seal them. You should now have 6 =
sealed envelopes, each with a piece of paper stating the above phrase, =
your name and address, and a $1.00 bill. What you are doing is creating =
a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate =
service and you are paying for it! Like most of us I was a little =
skeptical and a little worried about the legal aspects of it all. So I =
checked it out with the U.S. Post Office (1-800-725-2161) and they =
confirmed that it is indeed legal! Mail the 6 envelopes to the following =
addresses:=20

:=20
:=20

: #1) Aditya Venkataraman 14215 Lake Trail Driv Sugar Land, Texas 77478=20

: #2) Charlie Baltimore 71-20 Sutton Place #3 Fresh Meadows, NY 11365=20

: #3) Shaun Littman 3061 Clubhouse Road Merrick, N.Y. 11566=20

: #4) Joseph Morris P.O. Box 37 Union Grove, Al 35175=20

: #5) M. Dixon P.O. Box 767412 Roswell, GA 30076

: #6) Lee Higginbotham 8505 Columbus Ave. #209 North Hills, CA 91343
:=20
: STEP 2: Now take the #1 name off the list that you see above, move the =
other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as =
number 6 on the list. DO NOT JUST COPY OVER THE LAST NAME, BUT REMEMBER =
TO MOVE EACH NAME UP ONE LINE!!!!!!!!=20

: STEP 3: Change anything you need to, but try to keep this article as =
close to original as possible. Now, post your amended article to at =
least 300 newsgroups. (I think there are close to 32,000 groups) All you =
need is 300, but remember, the more you post, the more CASH you make!=20

: This is perfectly legal! If you have any doubts, refer to 18 Sec. 1302 =
& 1341 of the Postal lottery laws. Keep a copy of these steps for =
yourself and, whenever you need CASH, you can use it again, and again.=20

: PLEASE REMEMBER that this program remains successful because of the =
honesty and integrity of the participants and by their carefully =
adhering to the directions. Look at it this way. If you are a person of =
integrity, the program will continue and the CASH that so many others =
have received will come your way.=20

: NOTE: You may want to retain every name and address sent to you, =
either on a computer or hard copy and keep the notes people send you. =
This VERIFIES that you are truly providing a service. (Also, it might be =
a good idea to wrap the $1 bill in dark paper to reduce the risk of mail =
theft.) So, as each post is downloaded and the directions carefully =
followed, six members will be reimbursed for their participation as a =
List Developer with one dollar each. Your name will move up the list so =
that when your name reaches the #1 position you will be receiving =
thousands of DOLLARS in CASH!!! What an opportunity for only $6.00. Send =
it now, add your own name to the bottom of the list and you're in =
business!=20

: ---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS=20

: Step 1) You do not need to re-type this entire letter to do your own =
posting. Simply put your cursor at the beginning of this letter and drag =
your cursor to the bottom of this letter, and select 'copy' from the =
edit menu. This will copy the entire letter into the computer's memory.=20

: Step 2) Open a blank 'notepad' file and place your cursor at the top =
of the blank page. From the 'edit' menu select 'paste'. This will paste =
a copy of the letter into notepad so that you can add your name to the =
list.=20

: Step 3) Save your new notepad file as a .txt file. If you want to do =
your postings in different settings, you'll always have this file to go =
back to.=20

: Step 4) Use Netscape or Internet explorer and try searching for =
various newsgroups (on-line forums, message boards, chat sites, =
discussions.)=20

: Step 5) Visit these message boards and post this article as a new =
message by highlighting the text of this letter and selecting paste from =
the edit menu. Fill in the Subject, this will be the header that =
everyone sees as they scroll through the list of postings in a =
particular group, click the post message button.=20

: You're done with your first one! Congratulations...THAT'S IT! All you =
have to do is jump to different newsgroups and post away, after you get =
the hang of it, it will take about 30 seconds for each newsgroup!=20

: **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE CASH YOU WILL =
MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 300** That's it! You will begin =
receiving CASH from around the world within days! You may eventually =
want to rent a P.O.Box due to the large amount of mail you will receive. =
If you wish to stay anonymous, you can invent a name to use, as long as =
the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE =
CORRECT.**=20

: Now the WHY part:=20

: Out of 300 postings, say I receive only 7 replies (a very low =
example). So then I made $7.00 with my name at #6 on the letter. Now, =
each of the 7 persons who just sent me $1.00 make the MINIMUM 300 =
postings, each with my name at #5 and only 7 persons respond to each of =
the 7 original 7, that is another $49.00 for me, now those 49 each make =
300 MINIMUM posts with my name at #4 and only 7 replies each, I will =
bring in an additional $343.00! Now, those 343 persons turn around and =
post the MINIMUM 300 with my name at #3 and only receive 7 replies each, =
I will make an additional $2401.00! OK, now here is the fun part, each =
of those 2401 persons post a MINIMUM 300 letters with my name at #2 and =
they each only receive 7 replies, that just made me $16,807.00!!! Those =
16807 persons will all deliver this message to 300 newsgroups with my =
name at #1 and if still 7 persons per 300 Newsgroups react I will =
receive $117,649.00! With an original investment of only $6.00! And some =
stamps. AMAZING! When your name is no longer on the list, you just take =
the latest posting in the newsgroups, and send out another $6.00 to =
names on the list, putting your name at number 6 again. And start =
posting again.=20

: The thing to remember is: Thousands of people all over the world are =
joining the internet and reading these articles everyday? JUST LIKE YOU =
are now!! So, can you afford $6.00 and see if it really works?? I think =
so... People have said, "what if the plan is played out and no one sends =
you the CASH? So what! What are the chances of that happening when there =
are tons of new honest users and new honest people who are joining the =

internet and newsgroups everyday and are willing to give it a try? =
Estimates are at 20,000 to 50,000 new users, every day, with thousands =
of those joining the actual internet. Remember, play FAIRLY and HONESTLY =
and this will really work.=20

: ** By the way, if you try to deceive people by posting the messages =
with your name in the list and not sending the CASH to the rest of the =
people already on the list, you will NOT get as much. Someone I talked =
to knew someone who did that and he only made about $150.00, and that's =
after seven or eight weeks! Then he sent the 6 $1.00 bills, people added =
him to their lists, and in 4-5 weeks he had over $10k. This is the =
fairest and most honest way I have ever seen to share the wealth of the =
world without costing anything but our time!!! You also may want to buy =
mailing and e-mail lists for future CASH.=20

: Remember, HONESTY IS THE BEST POLICY. You don't need to cheat, the =
basic idea is to make the CASH!! GOOD LUCK to all and please play fairly =
and reap the huge rewards from this, which is tons of extra CASH. Keep =
an eye on the newsgroups and when the cash has stopped coming (that =
means your name is no longer on the list), you just take the latest =
posting at the newsgroups, send another $6.00 to the names stated on the =
list, make your corrections (put your name at #6) and start posting =
again.=20

: $$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!$$$!!!=20

: GOOD LUCK!!!=20

charset="iso-8859-1"

----------=

Attention!!=20
This is not a scam, this is the real deal--this is money in your=20
pocket!
Note: I made the $6 leap of faith and it is paying off =
big=20
time! You should too.
Just read what is below and see for=20
yourself. This will change your life:

$6 Investment to make =
$1000s

: Make A Lot Of Money Fast =
!!!!!

:
: A while back, I was browsing =
newsgroups,=20
just like you, I came across an article similar to this that said you =

could make=20
thousands of CASH within weeks with only an initial investment of $6.00 =
plus=20
stamps! So I thought, "Yeah, right, this must be a scam!" But like most =
of us I=20
was curious and kept reading. It said that if you send $1.00 to each of =
the 6=20
names and addresses listed in the article, you could make thousands in a =
very=20
short period of time. You then place your own name and address at the =
bottom of=20
the list at #6, and post the article to at least 300 newsgroups. (There =
are=20
about 32,000 of them out there and that's quite a large market pool). No =
catch,=20
that was it. Even though the investment was a measly $6, I had three =
questions=20
that needed to be answered before I could get involved in this sort of =
thing.=20

: 1. IS THIS REALLY LEGAL? I called a =
lawyer first.=20
The lawyer was a little sceptical that I would actually make any CASH =
but he=20
said it WAS LEGAL if I wanted to try it. I told him it sounded a lot =
like a=20
chain letter but the details of the system (SEE BELOW) actually made it =
a=20
legitimate legal business.

: 2. IS OK WITH THE POST OFFICE OR IS =
IT MAIL=20
FRAUD? I called them: 1-800-725-2161 and they confirmed THIS IS =
ABSOLUTELY=20
LEGAL! (See 18, h sections1302 NS 1341 of Postal Lottery Laws). This =
clarifies=20
the program of collecting names and addresses for a mailing list. =

: 3. IS IT RIGHT? Well, everyone who =
sends me a=20
buck has a good chance of getting A LOT of CASH ... a much better chance =
than=20
buying a lottery ticket!!! So, having these questions answered, I =
invested=20
EXACTLY $7.92 ... six $1.00 bills and six 32 cent postage stamps ... and =
boy am=20
I glad I did!!! Within 7 days, I started getting CASH in the mail! I was =

shocked! I figured it would end soon and didn't give it another thought. =
But the=20
CASH continued coming in. In my first week I made between $20 to $30. By =

the end=20
of the second week I had a made a total of $1,000.00. In the third week =
I had=20
over $10,000.00 and it was still growing. This is now my fourth week and =
I have=20
made a total of just over $42,000 and it's still coming in... =

: It's certainly worth $6.00 and 6 =
stamps !!! Also,=20
make sure you print a copy of this article NOW, so you can get the =
information=20
off of it as you need it. I promise you that if you follow the =
directions=20
exactly, that you will start making more CASH than you thought possible =
by doing=20
something so easy! Suggestion: Read this entire message carefully! =
(print it out=20
or download it.) Follow the simple directions and watch the CASH come =
in! It's=20
easy. It's legal. And, your investment is only $6.00 (Plus postage) =
IMPORTANT:=20
This is not a rip-off; it is not indecent; it is not illegal; and it is=20
virtually no risk - it really works!!!! If all of the following =
instructions are=20
adhered to, you will receive extraordinary dividends.

: PLEASE NOTE: Please follow these =
directions=20
EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program =
remains=20
successful because of the honesty and integrity of the participants. =
Please=20
continue its success by carefully adhering to the instructions. You will =
now=20
become part of the Mail Order business. In this business your product is =
not=20
solid and tangible, it's a service. You are in the business of =
developing=20
Mailing Lists. Many large corporations are happy to pay big bucks for =
quality=20
lists. However, the CASH made from the mailing lists is secondary to the =
income=20
which is made from people like you and me asking to be included in that =
list.=20

: Here are the 4 easy steps to success: =

: STEP 1: Get 6 separate pieces of =
paper and write=20
the following on each piece of paper "PLEASE PUT ME ON YOUR MAILING =
LIST." Now=20

get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper =
so the=20
bill will not be seen through the envelope (to prevent thievery). Place =
one=20
paper in each of the 6 envelopes and seal them. You should now have 6 =
sealed=20
envelopes, each with a piece of paper stating the above phrase, your =
name and=20
address, and a $1.00 bill. What you are doing is creating a service. =
THIS IS=20
ABSOLUTELY LEGAL! You are requesting a legitimate service and you are =
paying for=20
it! Like most of us I was a little skeptical and a little worried about =
the=20
legal aspects of it all. So I checked it out with the U.S. Post Office=20
(1-800-725-2161) and they confirmed that it is indeed legal! Mail the 6=20
envelopes to the following addresses:

:
:

: #1) Aditya Venkataraman 14215 Lake =
Trail Driv=20
Sugar Land, Texas 77478

: #2) Charlie Baltimore 71-20 Sutton =
Place #3 Fresh=20
Meadows, NY 11365

: #3) Shaun Littman 3061 Clubhouse Road =
Merrick,=20
N.Y. 11566

: #4) Joseph Morris P.O. Box 37 Union =
Grove, Al=20
35175

: #5) M. Dixon P.O. Box 767412 Roswell, =
GA=20
30076

: #6) Lee Higginbotham 8505 =
Columbus Ave.=20
#209 North Hills, CA 91343
:
: STEP 2: Now take the #1 name off =
the list=20
that you see above, move the other names up (6 becomes 5, 5 becomes 4, =
etc...)=20
and add YOUR Name as number 6 on the list. DO NOT JUST COPY OVER THE =
LAST NAME,=20
BUT REMEMBER TO MOVE EACH NAME UP ONE LINE!!!!!!!!

: STEP 3: Change anything you need to, =
but try to=20
keep this article as close to original as possible. Now, post your =
amended=20
article to at least 300 newsgroups. (I think there are close to 32,000 =
groups)=20
All you need is 300, but remember, the more you post, the more CASH you =
make!=20

: This is perfectly legal! If you have =
any doubts,=20
refer to 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy =
of=20
these steps for yourself and, whenever you need CASH, you can use it =
again, and=20
again.

: PLEASE REMEMBER that this program =
remains=20
successful because of the honesty and integrity of the participants and =
by their=20
carefully adhering to the directions. Look at it this way. If you are a =
person=20
of integrity, the program will continue and the CASH that so many others =
have=20
received will come your way.

: NOTE: You may want to retain every =
name and=20
address sent to you, either on a computer or hard copy and keep the =
notes people=20
send you. This VERIFIES that you are truly providing a service. (Also, =
it might=20
be a good idea to wrap the $1 bill in dark paper to reduce the risk of =
mail=20
theft.) So, as each post is downloaded and the directions carefully =
followed,=20
six members will be reimbursed for their participation as a List =
Developer with=20
one dollar each. Your name will move up the list so that when your name =
reaches=20
the #1 position you will be receiving thousands of DOLLARS in CASH!!! =
What an=20
opportunity for only $6.00. Send it now, add your own name to the bottom =
of the=20
list and you're in business!

: ---DIRECTIONS ----- FOR HOW TO POST =
TO NEWSGROUPS=20

: Step 1) You do not need to re-type =
this entire=20
letter to do your own posting. Simply put your cursor at the beginning =

of this=20
letter and drag your cursor to the bottom of this letter, and select =
'copy' from=20
the edit menu. This will copy the entire letter into the computer's =
memory.=20

: Step 2) Open a blank 'notepad' file =
and place=20
your cursor at the top of the blank page. From the 'edit' menu select =
'paste'.=20
This will paste a copy of the letter into notepad so that you can add =
your name=20
to the list.

: Step 3) Save your new notepad file as =
a .txt=20
file. If you want to do your postings in different settings, you'll =
always have=20
this file to go back to.

: Step 4) Use Netscape or Internet =
explorer and try=20
searching for various newsgroups (on-line forums, message boards, chat =
sites,=20
discussions.)

: Step 5) Visit these message boards =
and post this=20
article as a new message by highlighting the text of this letter and =
selecting=20
paste from the edit menu. Fill in the Subject, this will be the header =
that=20
everyone sees as they scroll through the list of postings in a =
particular group,=20
click the post message button.

: You're done with your first one!=20
Congratulations...THAT'S IT! All you have to do is jump to different =
newsgroups=20
and post away, after you get the hang of it, it will take about 30 =
seconds for=20
each newsgroup!

: **REMEMBER, THE MORE NEWSGROUPS YOU =
POST IN, THE=20
MORE CASH YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 300** That's =
it! You=20
will begin receiving CASH from around the world within days! You may =
eventually=20
want to rent a P.O.Box due to the large amount of mail you will receive. =
If you=20
wish to stay anonymous, you can invent a name to use, as long as the =

postman=20
will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.** =

: Now the WHY part:

: Out of 300 postings, say I receive =
only 7 replies=20
(a very low example). So then I made $7.00 with my name at #6 on the =
letter.=20
Now, each of the 7 persons who just sent me $1.00 make the MINIMUM 300 =
postings,=20
each with my name at #5 and only 7 persons respond to each of the 7 =
original 7,=20
that is another $49.00 for me, now those 49 each make 300 MINIMUM posts =
with my=20
name at #4 and only 7 replies each, I will bring in an additional =
$343.00! Now,=20
those 343 persons turn around and post the MINIMUM 300 with my name at =
#3 and=20
only receive 7 replies each, I will make an additional $2401.00! OK, now =
here is=20
the fun part, each of those 2401 persons post a MINIMUM 300 letters with =
my name=20
at #2 and they each only receive 7 replies, that just made me =
$16,807.00!!!=20
Those 16807 persons will all deliver this message to 300 newsgroups with =
my name=20
at #1 and if still 7 persons per 300 Newsgroups react I will receive=20
$117,649.00! With an original investment of only $6.00! And some stamps. =

AMAZING! When your name is no longer on the list, you just take the =
latest=20
posting in the newsgroups, and send out another $6.00 to names on the =
list,=20
putting your name at number 6 again. And start posting again. =

: The thing to remember is: Thousands =
of people all=20
over the world are joining the internet and reading these articles =
everyday?=20
JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really =
works?? I=20
think so... People have said, "what if the plan is played out and no one =
sends=20
you the CASH? So what! What are the chances of that happening when there =
are=20
tons of new honest users and new honest people who are joining the =
internet and=20
newsgroups everyday and are willing to give it a try? Estimates are at =
20,000 to=20
50,000 new users, every day, with thousands of those joining the actual=20

internet. Remember, play FAIRLY and HONESTLY and this will really work.=20

: ** By the way, if you try to deceive =
people by=20
posting the messages with your name in the list and not sending the CASH =
to the=20
rest of the people already on the list, you will NOT get as much. =
Someone I=20
talked to knew someone who did that and he only made about $150.00, and =
that's=20
after seven or eight weeks! Then he sent the 6 $1.00 bills, people added =
him to=20
their lists, and in 4-5 weeks he had over $10k. This is the fairest and =
most=20
honest way I have ever seen to share the wealth of the world without =
costing=20
anything but our time!!! You also may want to buy mailing and e-mail =
lists for=20
future CASH.

: Remember, HONESTY IS THE BEST POLICY. =
You don't=20
need to cheat, the basic idea is to make the CASH!! GOOD LUCK to all and =
please=20
play fairly and reap the huge rewards from this, which is tons of extra =
CASH.=20
Keep an eye on the newsgroups and when the cash has stopped coming (that =
means=20
your name is no longer on the list), you just take the latest posting at =
the=20
newsgroups, send another $6.00 to the names stated on the list, make =
your=20
corrections (put your name at #6) and start posting again.

If the mod doesn't allow all users on the channel to run with low
TxDelay settings(on the order of 5-8) - then don't bother, as you won't
be able to "play with the others" on the channel. Besides, with high
TxDelay settings, your thruput won't be significantly better than at
120bps.

Get a dedicated data radio. TEKKs are good, and cheap.

1394. FS: ham radio 2M mobile & KPC-3 TNC

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-25 00:00:00 UTC
From: mrbill@mrbill.net
Message-ID: <slrn8svpm0.h50.mrbill@ohno.mrbill.net>
Source record: 71378
Cross-posted to: rec.radio.swap,alt.ham-radio.packet,rec.radio.amateur.equipment,austin.forsale,utexas.forsale

I've got a Kantronics KPC-3 TNC in great condition along with
an Azden PCS-2000 2M mobile rig, with custom-wired interconnect
cable so that the KPC3 gets its power from the 2M rig and no
other cables are necessary.

I've got the manual for the Azden, and will also throw in a set
of DB9-DB25 serial adapters and a DB25M-M cable for use with
the TNC to connect to your computer. The hard-to-match-up
12pin mic jack on the 2M rig has been replaced with a normal
8pin jack, and I'll include an extra unused male jack, a
female plug, and a Radio Shack microphone that can be wired up
to use the rig for voice if wanted.

This is a complete setup, just add a 13.8V power supply, an
antenna, and a computer (or serial terminal), and you've got
a complete packet radio station.

$125 OBO, plus shipping if necessary. This setup worked great
for me, but I no longer use packet.

The man posted to a ham radio newsgroup, and I'm a ham radio operator, so that makes this my business. In addition, I happen to know someone who has two of these radios available (if he still has them), so that also makes this my business.

But, actually, who put you in charge? Perhaps you should "mine" your own business (the word "mind" has a "d" at the end instead of an "e").

Source record: 71305

I am about to buy my first HF rig and I'd really like to know which rig I should look for. Right now, I figure my primary mode will be phone. CW will kick in later after I practice for a while.

I am willing to spend about 1000 $ CDN or 700 $ US so I you can see, I will not buy the latest and meanest rig on the market. I know there are tens of different used rigs on the market so I really need your help to find a rig that will suite me.

So as I said, I'll operate mainly phone, some code and maybe digital in the future. I really want a digital VFO though. I have seen and used a Yaesu 757 GX II and really love it. That's one rig I might be willing to buy. I you know of similar rigs (Kenwood or Icom or from another manufacturer) let me know.

One thing I want to emphasis. I want ideas. Not actual sale adds. When time comes, I know where to look to buy HF rigs.

For what it is worth, the new Ten Tec rig that hooks up to a computer has gotten good reviews, has good-sounding audio, and has all the filters built in (of course, you'll need a computer). It's in your price class, too.

Otherwise, since you'll be mainly on phone, perhaps Kenwood; that brand is well known for having good audio. A TS-440 or 830 would be a great starter rig.

Personally, I have an Icom 735, and it's a good little rig, and runs $400 to $500 used nowadays.

You might find it useful to subscribe to QST, so you can access their online reviews of rigs, going back to the early 1980s.

I use an old Kenwood ts680s HF+6, It's been very good so far and I've had it for years.The ts440s is also a good buy. The ft757gx can sometimes be very noisy, especially if it has been tampered with. The ft707 is a good basic rig, and the older ft102 has exellent rx. The newer ts570dg is supposed to be the dogs doo-dah's but may be out of your price. Also you could consider an alinco dx70th brand new, My freind uses one and says it's exellent.
Hope I've been of help

Give strong consideration to Kenwood TS440SAT/450SAT/570D. If you get a
well maintained radio in any of these series you would be happy. At all
cost, avoid the entry level rigs. You are likely to outgrow them in a
short time.

Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

TS-520S tranceiver with VFO-520 remote vfo, digital display (not DG-5), and desk mike (Yeasu YD-148). The whole package for $375 + shiping.

The transceiver is electronically sound and puts out at least 100 watts on all bands. Cosmetically, some scratches, none disfiguring. I don't know X of 10 as those values have been made meaningless. I have the Operator manual and Service manual for the TS-520S and the Operator Manual for the VFO-520. A spare set of finals are available, however the ones in the rig only have about 10 - 15 hours on them. All cables are available for the remote vfo and display.

Would consider trade for a late model dual-band mobile; IC-2700/2710, FT-8500, DR-610.

Tony -- KF3BX

I'm not really familiar with that wx data. Sounds like VHF...Dunno, to
me sounds like a modem problem. Is that a modem for normal phone line
use? Usually you would need a modem designed to deal with audio input
signals. But all my wx stuff has been on HF using real simple op-amp
modems for the most part. Is that data for aircraft? I've seen programs
that can use the audio out from a receiver and go to a computer and
decode.
But if you are not seeing anything on the screen sounds like no signal
to the computer, or the modem is not receiving a correct signal. I did
mainly wefax pictures. The op amp modems will work wefax, sstv, weather
txt "if you know the correct baud rates/shifts etc",and rtty fairly
well. Maybe someone else more familiar with the type system you are
trying to use. MK

Message-ID: <39d0ab99$1_1@news.iglou.com>
Source record: 71396

I found a GE suitcase programmer but for cash not a trade. Here is what I want to sell.
1. GE Master 2 UHF Repeater, Deskmate case (about 40" high) 40-watt output. 30 Amp GE power supply. I will add to this a GE Master 2 mobile 75 watt with preamp so you can upgrade to higher power and add the pre amp. Needs Icom's, Duplexer, feedline and antenna. (I have not run this repeater but was told it works and was running GMRS) $700.00 plus shipping
2. Decibel Products Duplexer. GE marked and with a GE part number. NOS. still wrapped in the plastic never hooked up brand new. 3 can UHF tuned in the 451.xxx area now. $250.00 plus shipping
3. Regency rackmount UHF repeater. Just the repeater no rack included. Repeater is tuned in the GMRS area now but no crystals. I have never run this repeater as I only bought it for the rackmount 100-watt amp that was with it.$175.00 plus shipping
4. CSI - 22 community tone panel. I just bought this but decided that I only needed 1 PL tone on a ham repeater but I think this controller and all so it might be just the thing for someone. $85.00 plus shipping.
5. GE Master 2 mobile UHF 75 watt with UHS pre-amp MC65KKG88B. I have 1 of these made into a repeater and it works great. I have bench checked a few and
Some put out 80 watts as is. I have had no complaints on these radios. Icom's were removed by the police agency I bought them from and I do not have any I want to sell. Price without accessories =$75.00 with accessories =$100.00 plus shipping.
6.GE delta cables downloading type. Will work on Delta and Ranger radios. $40.00 each + shipping
7.GE Voice Guard digital voice encryption boxes. 9600 style $25.00 each + ship.
8. GE standard speaker mic for MP-A, MTL and MPD radio's new in the box $40,00 plus shipping.
9. EF Johnson Challenger 7187 UHF 80 watt trunk mount radio. Has 99-channel alpha Control head. 450. - 470. Range. $250.00 + ship.
Thanks for looking and remember I take trades but I need a GE suitcase programmer.
Dean

1447. How to control ICOM-R8500 ??

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-26 06:05:02 UTC
From: c1c1@yahoo.com
Message-ID: <20000926060618.8536.qmail@web1203.mail.yahoo.com>
Source record: 71392

Hi there,
I would like to write my own program to control
the new receiver ICOM-R8500;
I am going to write it in QBASIC since the program
will run on an old PC in DOS mode.
I need a little help in order to start...
I have read the R8500 manual: there are 2 pages
with the commands list but I didn't succeed to get
any result !
What I am looking for is a little sample program
able, for instance, to read the frequency or set
a memory.
Thanks in advance to anyone that could help me.
The best 73's from Cris.

Hello

Can anyone tell me how to wire the Jones plug on the rear of the FT301D?
Also could anyone copy the manual for copying cost plus postage? Bought a
none working unit at a swap and would like to test it out.

Ted VE3ONJ

Mr Davies:

You stupid Dipswitch. Read the the News Group titles that this
SPAM was crossposted to.

rec.radio.amateur.dx,rec.radio.amateur.equipment,
rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.amateur.swap

Now please tell me what this minusha has to do with these News Groups.

It is just plain SPAM from an IDIOT with another IDIOT defending his
stupid childish actions. where would we be if every IDIOT posted his
Web Page in this News Group

Get a LIFE.. SFB.

Just my opinion..

Bob

Yes it probably does and almost everybody does it.. With Most people
it is a URL at the bottom of the showing where to look if they want..

It is NOT as in AB7SL's case where the whole dam message was SPAM.
Their was NO body to the message. ALL WEBPAGE SPAM.

Just my opinion..

1453. Yeasu Vx-5R VFO BAND Problem

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-27 00:00:00 UTC
From: vrkd@my-deja.com
Message-ID: <8qt3h1$1fo$1@nnrp1.deja.com>
Source record: 71332

I am facing a very peculiar problem with my Yaesu VX-5R HT. I have been using it for an year without any problem. Just yesterday, when I put on the power- I am not sure if I pressed the Light or FW Function button by mistake while powering on- the radio had many of its preprogrammed memory stations not being displayed and it would not listen on frequencies like 161.675 mhz VHF which is well within its range. Then I reset the microprocessor by pressing the MR,VFO,4 while powering on.
From then, in the VFO mode, it does not allow me to enter any frequency other than the following range - 50-54, 144-148, 430-450 mhz and in all these bands, the band shows NFM. Even if I press the band button, it just shows these 3 ranges- no AM, WFM, or any other ranges within NFM.
There is no service centre in India where I stay. Pls let me know if I can try anything before giving up. Any suggestions would be most welcome.

Can't help out with the tone board, but you can get the chipset for the
TS-440 from PDA on the web: http://www.hosenose.com .

They have the chips and the interface cable for a reasonable price.
That's where I got mine.

In article <39b011c2.10270245@news5.bellatlantic.net>,
dconti2@bellatlantic.net says...
> They have been spoiled by the pick up service of UPS.

They apparently forgot that the USPS carrier comes in every day to drop off mail, and they can have the carrier pick up as well. Express Mail shipments can be picked up on request by a simple phone call. And if they had stamps.com they could print their own postage for the shipment, via whatever means (Priority, Express, etc.) they chose.

Anyone have experience with or information on either of these two antenna couplers currently on the surplus market:

- Harris RF-601A

- Rockwell/Collins (?) HF-8040A

Internet searches were non-productive - got hits only on those surplus outlets selling the gear. Don't want to spend the money for the manuals unless the gear is acceptable to my needs. Type of info required: Any special adapters needed to tune long-wire antennas with these tuners? What type of cable is used between the control head and the coupler?, etc.

Well, call it spam, if you wish -- I visited his web site. He has no advertising. He's not selling anything. It's just a bunch of web pages a ham, AB7SL, has put up to show off his station. I'm a little puzzled at all the negativity here. I've seen much more "commercial" presentations in this newsgroup; guys selling all kinds of crap, but, ohhh, wellllll...

Our ARES group wants to put together a linked repeater system, using 2-meter repeaters and the necessary linking control channels. We are looking to buy new as we hope we can get the county to pay for it. We have no experience in repeaters other than as users.

Which are good brands of this equipment, and which should we stay away from? And why?

are there any articles or web pages which describe all the bits and pieces that we will need for a system like this, and how it all goes together?

-------- Original Message --------
Subject: FS: Drake T4X Panel like New
Date: Wed, 27 Sep 2000 19:46:34 -0700
From: K6SDE <k6sde@my-deja.com>
Newsgroups: alt.ham-radio.marketplace

I have a like new Drake T4X panel for sale -- $25 + $3.20 Priority Mail
+ $.85 insurance if you wish it.
It's presently padded well and in a box ready to ship.

You can view it at:
http://www.geocities.com/k6sde/T4X_Panel/T4X_Panel.jpg

Realize that the digital picture has been "sharpened" which makes edges
look distorted and the panel is truly free of anything that I would
consider a blemish except for a few scratches which are at the very ends
and hidden by the case lips. It
has NOT been repainted or otherwise touched up. I do see that the black
mark in the dial window appears to be narrow at the bottom though you
don't see that when the knob is mounted.

1471. FS:GPS antennas for sale,$55,Still have a few left!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-28 00:00:00 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39D2BAB9.1E055A5E@home.com>
Source record: 71264

I still have for sale a few of these real neat GPS antennas. Please check
out the 3 pictures for full information. Several of these have been sold to HAM in the San Diego area and they just love them! Some have red gaskets, some
have white and some have black gaskets. This gasket seals the antenna when you drill the hole for securing it. No difference but in case you purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin GPS II, II+, GPS III and similar units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Can provide coaxial jumper if needed. Will ship internationally, buyer pays full AIR mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest!

1476. WTT:FT900CAT for TS870,IC756,765,751a,etc

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-28 00:00:00 UTC
From: radiofreq0@aol.com
Message-ID: <20000928073428.17843.00000012@ng-cg1.aol.com>
Source record: 71269

I have an as new Yaesu FT900CAT with Collins filter, 500hz CW filter
(installed),
YSK-900 seperation kit
This rig is as new in its box.
I want to trade, in part, plus money, for a Kenwood TS870. If I am unable to
find and trade for one, I will then be interested in the following:
IC756
IC765
IC751A (late serial #)

Source record: 71271

I have a FT50R that has the out of band xmit mod enabled on it. I downloaded from the web the instructions for performing the mod and followed the instructions in reverse to undo it. Unfortunately this did not work. Does anyone have any info on how to undo this mod. The radio is for my wife who is very uncomfortable with having a radio with this mod enabled.

1480. FS:Only a few of these GPS antennas are left!! $55.00!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-28 00:00:00 UTC
From: Robert Lonn <rlonn@home.com>
Message-ID: <39D352F2.47EBE6FB@home.com>
Source record: 71273

Just a few of these antennas are left. Everyone who has one loves them!
I have for sale a bunch of these real neat GPS antennas. Please check
out the 3 pictures for full information. Some have red gaskets, some
have clear RTV and some have black gaskets. This gasket seals the
antenna
when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are
installed you don't see it anyway. They all have white tops. 2.75 inch
wide X .75 inch thick. Antenna requires 5 volts DC and receives its
power form the GPS unit like the Garmin II, II Plus, GPS III etc. That
have a detachable antenna with a BNC connector "Or" any GPS units that
provide power up to the antenna. $55.00 includes FREE USPS Priority mail
shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping
cost. Payment via BID-PAY or Western Union money order only for overseas
orders. USA orders can pay with US postal money orders-Western Union
money orders and will ship in a few days, personal checks when it clears
the bank. All units have been tested and are working. Have about half a
dozen to dispose of. If interested, send me an email! Thanks for your
interest! email me at rlonn@home.com

1481. KG8SU Antenna System / Common Mode intererence

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-28 00:00:00 UTC
From: Curtis Scholl <cscholl@izzy.net>
Message-ID: <39D34886.A56589B5@izzy.net>
Source record: 71274
Cross-posted to: rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur

Hi folks:

A while back I was having trouble with some common mode interference between my antenna system and my neighbors TV's. I wanted to let you all know what finally happened.

I live in an "upscale" (if there is such a thing) mobile home park where the real estate lot is pretty large by mobile home standards. My double wide is nicel placed on the lot and there is plenty of cover tree wise to hide the evidence.

I wanted to use a vertical antenna to keep the real estate being used down and keep the installation as unsightly as possible. It was not a ground plane. The shield of the coax was attached to a 1 foot spike driven into the ground. the center conductor was attached to the base of the vertical. To be sure, I used wire radials spread out over the ground in even angles. 4 radials were being installed.

I was getting a good SWR out of this installation with minimal antenna tuner involvement. I gave out with a shout and sure enough the neighbor lady comes out and says "Somebody's 8 Sugar Uniforms " are being talked about on her TV. OY!

We talked and I called the Media ONE cable company to come check her installation because it is obviously leaking. I don't hear anything in my TV or FM radios and such. They come out and check and say it's not their problem and I must be cranking out BIG wattage. (All of 100 watts from a barefoot HW-101). I put a low pass filter on just in case.

I started tracking wires in our subdivision and sure enough find my ground plane wires are directly over the TV CABLE. After a few experiments with and without the ground wires I came to the conclusion that the ground there just loves to conduct radio waves.

I gave up the vertical and am now using a multielement dipole with elements cut for 30, 20, 15 and 10 meters. No problems at all even at full power. I have to use a tall pole as the center of the inverted V.

I guess I could have still used a vertical with an elevated ground plane, however, I would have had to set the guy wires on my neighbors side of the fence. With the Inverted V dipole I can keep all the wires on my side and parallel with the homes and perpendicular to the street. That way I present as little evidence to the managers eye.

As an aside, there are covenants and agreements that the property owner has made with the township. It is evidenced by the comments that

the Cable TV office had. They said I could not have a "tower" by township rules and made comments like I should not even be using HAM gear near their installations. I don't think they have heard of PRB-1 up here. I don't have a "tower". All I had was vertical. Now I have a dipole.

I will have an invisible beam soon. I mean a wire beam antenna laid out on the roof of the house made of black wire to match the black shingles with a balun painted black. Maybe I will use a phasing circuit that will change the directions of the beam as well.

Where there is a will, there is a way.

Thanks for all of the advise from the last post.

You can spell. I am sorry that I made a typo, please forgive me (Mine vs Mind). As best as I can remember this is a FREE country and one has the option of making a purchase without (Big Brother W5NET) questioning WHY do you want it. If you have info on 1 'For Sale' share that and that is the only comment needed.

Have a Great day....

Source record: 71278
Cross-posted to: rec.radio.amateur.boatanchors,rec.radio.swap,rec.radio.amateur.equipment

I have an ailing Drake AC-4 that is available. It's physically nice, cables are fine, but when I attempt to use it, the output from the transmitter pulses (looks like a string of pearls in the monitor). If someone wants this power supply, be prepared for repair work. I don't have the time nor inclination to do it myself.

Schematic available if you need it. (My guess is that's nothing more than a blown diode or two.)

Price is $40. Add shipping, which is billed at actual cost. First money takes it.

Thanks!

Yes, same thing here about a year ago. I noticed that the one little nubbin that it swings on was broken off mainly , I think because it is so small. I ordered a new PTT switch, put it in and it never broke agn. If you ever open the mike up, you've got to be careful to realign the pin on one side and the little nubbin in its cup on the other side when retightening it up. If you miss on one side, the switch depresses cockeyed and doesn't always work.

I think, if you are willing to spend that much money, go for something like the FT-100 or one of the Icom 706s. They are usually about that or even under that amount. They are mobile rigs, but lots of people use them in their stations too. They are nice because they will give you just about all the bands to work on. HF, VHF and UHF with the exception of the gigahertz. Just a suggestion.

Because a used, coupla hundred buck HF transciever will probably work
worse than most QRP rigs. Especially say, if you were using
something like an Elecraft. (although with the elecraft they make an
amp that goes inside the radio...)

Sounds like a typical activist, with the typical limited range of
thinking.

What, if anything, does Japanese transcievers have to do
with whaling? Please enlighten us. I'm sure at Icom, Yaesu,
and Kenwood, all those manufacturers use whale meat in their
radio components. Yes, so that's what makes the DSP work
so well!

Also, what do you propose as a replacement. Certainly not
an american transciever, as we also harvest whales. We also
pollute the environment, and kill a bunch of people with bombs
every year. (and the list goes on and on but I need
not fill it in.)

Any industrialized nation, is FAR from being considered
"not guilty" of any kind of "atrocity."

1534. WTB: (or Trade) Large-Digit Nixie Tubes & Sockets

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-29 00:00:00 UTC
From: afranzman@aol.compute.com
Message-ID: <20000929184143.20227.00000491@ng-cg1.aol.com>
Source record: 71219

Wanted, to Buy or Trade:

(Sorry if this isn't quite on-topic. There don't seem to be any newsgroups exactly fitting this subject.)

Large-digit "Nixie" type neon numeric digital display tubes, especially those with digits over 1 inch (25mm) tall. Also, sockets for same.

Most wanted: Burroughs type B-7031 or B-7032 "Jumbo" size - 2 inch (50mm) tall digits in a tube 5.5 inches (140mm) tall by 2.25 inches (57mm) diameter at the base. And the large 14-pin sockets which fit them, type SK-117 or equivalent, having a pin circle diameter of 1.75 inches (45mm).

Actually, I have 5 of the very rare B-7032's, which are the inverted display configuration variation of the B-7031 (pins on top pointing UP when digits are upright). Mine are slightly to moderately darkened; however, due to anode location in these tubes, the darkening is mainly on the sides of the glass and does not significantly affect digit appearance when viewed from the front. All have been tested and function perfectly when driven in the 10-16mA range per preliminary B-7031 data which can be seen here: http://www.wps.com/archives/tube-datasheets/Datasheets/Burroughs-catalog-918A/index.html Will consider trading my B-7032's if I can get more and/or better condition B-7031's in the deal.

I also have available to trade, "Super" size Nixies of types B-6091 / NL-8423 (a.k.a. NL-5423, and interchangable with earlier types B-7153, B-6033, and BD-206). These have digits .808 inch (20mm) tall, in end-viewed configuration. In addition, I have Philips (Mullard) type ZM1040 which have digits 30mm (1.18 inches) tall and a red filter coating on the glass. I have sockets which fit both of these tube types, equivalent to HSK-112, HSK-106, B13B, and VH13/131.

Does anyone in southern California happen to have any of the HUMONGOUS Nixies with ***6 INCH TALL DIGITS***, type CD47/GR414 Rodan Indicator Tube by Okaya Electric Industries Co. Ltd. of Japan? Picture here: http://www.netcomuk.co.uk/~wwl/count.html Even if you're not willing to part with one, I'd love to just see one in operation. I can even build and bring a breadboard driver circuit if you don't have one.

Replies by email please. See below for a clue to repair my email address. 73.

Alan "A.J." Franzman

My real e-mail address does not compute.

I agree here as far as the FT 100 is concerned. I have one. It is my first HF rig as well and was quite possibly the best choice I could have made. With features like the DSP built in, easy access to the menu system via short cuts,

MFJ 784 DSP Filter.

Just the thing to give your receiver or transceiver some additional selectivity and versatility.

I'm offering it before listing it for auction mid week.

$125 or trade for ???

http://www.geocities.com/k6sde/MFJ/MFJ_dsp.html

Hi
As an alternative to un modding your radio you could do what I do.
If there are any memory Frequencies that are out of band,set them up like
a repeater by using the + or - duplex and then set the offset so that the
transmit frequency falls within the ham bands.

yeah, i just bought the FT100... received it wednesday and have been learning to operate it... i think that its going to be alright... its my FIRST new rig... i earned my novice in '87 and have been using 2nd/3rd/4th... hand rigs all that time... they were all good ones.... but this is the first time that I GOT TO UNWRAP THE PLASTIC!!! <grin>... nothin' like it!

the FT100 and the 706's are similar... what broke the tie with me was the closeout deal i got from a nationally known company (notice that i didn't mention their name?)...

seeya!

Source record: 71297

Hi:

If you desire a superior quality HT1000 / MTS2000 /
Jedi Programming cable, and do not wish to build a
clone , take a look below.

If you wish to have a Professional Cable made with superior componets and
support cable, along with the test plug, I have a Factory HT1000 / MTS2000
cable that is in Mint Condition. No Damaged Pins, or Cable.

These sell new for around $240.00 from Motorola

$135.00+ $8.00 for shipping and handling

Picture can be seen @

http://www2.4dcomm.com/metrotech/ht1000pg.jpg

Or if you desire a professional made clone I have those
too for $75.00+$8.00 for shipping

Picture can be seen @

http://www2.4dcomm.com/metrotech/ht1000_c.jpg

Terms:

Acceptable PrePayment in the form of a Postal Money Order (If immediate
shipping is desired) or a Personal / Business check is A-OK too if you do not
mind a Short Shipping Delay due to bank processing time. This is required only
the first time or two as once you are in the data base, PrePayment is no longer
required.

Hello all Houston area Hams,
I am planning to have an electronic equipment, parts, Ham items etc. garage, driveway sale sometime in October or November. I am wanting to clean out my garage and attic and I have a lot of misc. stuff from years of ham radio and marine and land mobile electronics. We are planning to sell our home next spring and need to get rid of a lot of stuff. Everything will be priced to move if not free.
If you interested in attending this sale, please RSVP to my email address. Give me your email address and a Saturday in October or November that would be good for you to attend. I will email you back with the exact date and time.
Thanks,
Randy Perkins, WB5KCM

Still have some of these antennas. Everyone who has purchased one likes them!
Please check out the 3 pictures for full information. Some have red gaskets, some have clear RTV and some have black gaskets. This gasket seals the
antenna when you drill the hole for securing it. No difference but in case you
purchase one the color of the gasket might vary plus when they are installed you don't see it anyway. They all have white tops. 2.75 inch wide X .75 inch thick. Antenna requires 5 volts DC and receives its power form the GPS unit like the Garmin II, II Plus, GPS III etc. That have a detachable antenna with a BNC connector "Or" any GPS units that provide power up to the antenna. $55.00 includes FREE USPS Priority mail shipping in the
USA only. Will ship internationally, buyer pays full AIR mail shipping cost. Payment via BID-PAY or Western Union money order only for overseas orders. USA orders can pay with US postal money orders-Western Union money orders and will ship in a few days, personal checks when it clears the bank. All units have been tested and are working. Have about half a dozen to dispose of. If interested, send me an email! Thanks for your interest! email me at rlonn@home.com

What exactly did you do? Are you talking about the MARS/CAP mod,
or something more extensive? Did you perform the original modification,
or someone else? If the latter, do you know exactly what they did?

On my radio, the MARS/CAP transmit range extension is controlled by
a single blob of solder. The blob simply joins two adjacent pads.
Either adding or removing the blob causes the radio to re-initialize
itself when the radio is next turned on.

On the other hand, there are other modifications that involve removing
a resistor from the board if I remember correctly. If that's been done,
you will need to replace it.

> kd5gox@qsl.net

Doing this on a tube rig like that is kinda tricky. There is no power level control, so the only thing you have to use is the mike gain or car level. Running cw, this is very easy. Just load the rig up to the desired level you want to run, and go. But working phone it becomes more complicated as you must keep a linear output. So lets say you tried loading to only 50 watts, and work ssb. You would need to be very careful and run a low mike gain. The problem is , it's easy to run too much mike gain, and then you overdrive the final section, and then you are running on the ragged edge as far as linear operation. "underloaded". It's easy to cure this problem, and load the rig for full output, but then it's kinda hard to keep the output to a low level. And also the audio level will be low in order to run this way. So you see , it's kinda tricky. You may well be best off taking one tube out, and fully loading that single tube if you run ssb. But if you run only cw, it's not worth the trouble. This is one area where the new solid state rigs are very easy. Most all have a power level control in addition to the mike/car gain control. Say on my IC-730, I can adjust the power from 4w to 100w just with that control. And the mike level stays the same no matter what power. A much more desirable rig for qrp, low power use. I've had 520's, and still use a TS-830, which is basically the same thing, but I don't use low power much with them. I always fully load, and just blow and go. I'm worry about underloading alot. Thats causes splatter. BTW, I'll throw in a last tidbit about tube final kenwoods...The only proper way to fully load is in CW mode. You can't get fully loaded up when the rig is in TUNE position. If I were to try to work phone on an underloaded 520, I'd sure have a scope hooked up to watch the output. Also I guess you could consider a swamping network to soak up the excess power, while letting the rig run full out. That would be one way to ensure a linear output. MK

For sale or will trade for a dual band ht with all accessories must be in excellent condition. The amp is in excellent working condition, cosmetic looks are excellent. The unit works FM and SSB also has a good working pre amp. The unit works with 13.8vdc 5 watts in will produce an output of 50 watts, 25 will produce an output of 160. The unit has a built in watt meter. Just hook it up and you are ready to go. I am asking $325.00 including shipping. OR will trade for an excellent working and cosmetic condition dual band ht with all accessories.

I agree that there is strong evidence for a pre-Columbian presence in
the Americas by Africans. But not 12,000 years ago. The earliest plausible
date would be 4,000 BC. Before that, there's no evidence of Africans using
boats, or even rafts, that could survive an ocean crossing. The Americas
were thinly populated up to about 1000 AD, so it would be possible for a
group to exist in the Americas for a fairly long time before encountering
other groups intent on killing them off.

With the META tag inserted into your HTML code you don't have to go
to great lengths to cover all your bases. The META tag alone
does all the work for you.

If I want to find your website, let the search engines do the
work for you.

Keep advertising and people will eventually ignore you, as if
most haven't already.

Care to explain this more? What is a META tag, and how do I use it?
Can you provide example html code for this - something I could copy to
my site with minor modification?

Use a search engine META tag in your HTML code, then you save
the trouble of having to manually enter your website URL
to every single search engine out there. While your at it,
if you haven't already, put it in your web address information
on the online callsign databases, such as QRZ.

I am trying to put together a list of URL's that have ham gear forsale or auction. These will be posted occasionally for informational purposes and will be kept up on my website.

We all know about eBay, eHam and QRZ and Yahoo, but are there others we may be missing?

To get the widest audience for a sale, people must know where to look, so if you have a favorite place to go look, let me know the URL and I will check it out and post it with the list.

Thanks,

Pat

Check out the Icom 751A. You could buy one of those and have a couple hundred bucks left over, though it does not have an internal antenna tuner. But I would recommend trying to stretch to about $800 for a nice used Kenwood TS850SAT - you will be extremely happy with the extra $100 spent for a high perfromance hf rig with an automatic antenna tuner. Good luck! --- Steve KK9ZZ

Want to buy classic boatanchors. I'm mainly interested in the following:

Hammarlunds (HQ-170s, 180s)
Hallicrafters SX 115, SX-88
marine HF radio receivers from the 70s and 80s

Please let me know your price and info.

1593. Trade: 3 Yaesu FNB-42 batteries for 1 FNB-41

Newsgroup: rec.radio.amateur.equipment
Date: 2000-09-30 05:20:34 UTC
From: Dwight Stewart <stewartx@sccoast.net>
Message-ID: <39D57806.3CB0DC56@sccoast.net>
Source record: 71242

I've have three FNB-42 heavy-duty 1100mAh batteries that I would like to trade for one standard FNB-41 battery.

The FNB-41 is the stock battery that comes with the FT-50R (and some other Yaesu radios). The FNB-42 is the larger, more powerful, replacement battery that allows longer radio use between charges.

I purchased these for my Yaesu FT-50R. But, because they don't come with a belt clip, I cannot use them with my uniform (uniform regs say radio must be worn on belt). I intended to use these with a belt holster (available everywhere), but I recently found out the regs won't allow this either.

All three FNB-42 batteries are like new (with boxes and instructions) and have only been charged a couple of times (initial and a maintenence charge). I expect the battery that is offered for exchange to be in equally good condition.

If you'd like to trade, contact me by email. Serious traders only please.

I have moved and don't have room for some of my PERSONAL Collins Collection I have been collecting for 10 years. I need to thin some of the pieces out. All these pieces are BEAUTIFUL. I thought I would give the group the first chance....73

A. I have a Collins KWM-1 transceiver, 516F-1 Collins matching power supply for the KWM-1, original box for the KWM-1, Astatic SSB head desk microphone wired for the KWM-1, comes with the original manual also. This station was bought be me from the ORIGINAL owner he purchased it new in 1959. I also have the matching Collins 312B-2 station console (Rare Item). The KWM-1 was worked on by Wayne W6IRD. If I was to rate this one it would be a 9.6, but remember I am very conservative with my grading.... $3000.00 CCA Very good (cleanest one I have seen)

B. Collins 75A-3 receiver with all the OPTIONAL internal accessories. 6.0 khz AM filter, 8R-1 Crystal Calibrator, and NBFM adaptor. I have the had the case repainted with black krinkle paint (Painted at a place that paints, and bakes the paint on) They paint military components.....Its a hair darker than the front panel but it beautiful. This is my favorite Collins receiver.
$1500.00 This is a beauty !!!!!!!!!!!!!

C. Collins 399C-1 external VFO for the KWM-2, this beauty does not have a phone patch/wattmeter/swr meter
$1500.00 Very clean !!!!!!!!!!!!!!!

D. Collins 312B-3 speaker only $275.00

E. Collins PM-2 power supply for a KWM-2 $199.00 CCA very good

F. Collins 62S-1 144/50 MHZ converter $2000.00 with manual , and cable CCA very good (I have 2 of them for SALE)

G. Collins 62S-1 144/50 MHZ converter $2000.00 with manual, and cable CCA very good

H.. Collins 75S-3 winged emblem receiver $550.00 looks great... CCA very good

I. (2) Collins 270G-2 speakers repainted with black krinkle paint $350.00 each

J. Beautiful S-line consisting of a 75S-3, 32S-3, 516F-2 manuals, and cables, all winged emblem in excellent condition $1500.00
all original....CCA Excellent...

MORE ITEMS TO FOLLOW......STAY TUNED

1596. Problem with FT-90

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-01 00:00:00 UTC
From: Dave Nissen <mcsok9@winco.net>
Message-ID: <8r7ohu$k6n$1@news3.infoave.net>
Source record: 71098

Greetings.
I purchased a Yaesu FT-90 (brand new) at a local ham fest. I installed it in my car and started the programming process. We have a local repeater at 147.060 +600 with a 103.5 tone on the input only. I was unable to bring up this machine. We also have a repeater on 444.300 with no tone. The radio works fine there. I programmed a repeater that is about 60 air miles away, 147.030 +600 tone 103.5 and the radio worked correctly. I did a bunch more checking, reset the thing according to Yaesu instructions, with no better result.

After consulting with friends, I discovered that I am bringing up the machine, but for some reason I was unable to hear it. I programmed a scanner to the output of the machine, and heard myself bring it up. Of course I said, I must have a tone on the receive, checked it and this was not the case. I then drove near the repeater site (about a 1/4 mile away) and attempted to bring up the machine. I did, and was able to hear it on the radio, but as I drove away, the machine faded out. This took another 1/4 mile. Checked the squelch setting and found the radio to be set on wide open squelch.

I am completely confused. I called the selling company, who thought as I did that there was a problem with the repeater and not the radio. I would agree if I was unable to hear it on a scanner, and was able to bring it up as usual with a 5 watt HT and hear it just fine.

The problem seems to be on the receive and not the transmit.

Any suggestions??

Thanks in advance
Dave Nissen de W9COP

What can I use to pass several feedlines through a wall . From outside to inside . I currently have a PVC pipe through the wall for 2 feedlines using an elbow and caulking on the outside . I plan on adding to more feedlines and need something that might be better . I would like away that allows me to pass 4 feedlines through the wall without removing the connectors on the ends . Thanks, Sam alphacentauri@i-plus.net

Does anyone know how the Kenwood VC-20 VHF Adapter for the R-5000 compares to the VHF convertor for the Drake R-8? Or... If anyone has the Kenwood Converter, I'd be interested in hearing about it. I'd like to put one in the R-5000 if it's worth it.
I have one in the Drake that works excellent. The Aircraft band for example, is much more selective and sensitive than any of my "scanners" picking up towers the scanners wont. Wondering if The VC-20 has similar quality. Thanks for any info,
Rick.

Thanks for reading the FAQ Page on my site. Yes admitting the illness is good
therapy. You have helped to make my day.
Thank you for posting.

I don't know if this is appropriate for this newsgroup but I just acquired some old amateur radio equipment from my elderly uncle. I might put it on ebay but I thought I could give this group a chance at it first if anyone wants to buy some of it at any reasonable price. I believe he said that the transmitter is 6 meters and I have a receiver and some boxes of tubes as well. Please let me know if there is any interest. Thanks -Dave

> Anyway, I want to get a FNB-25 but I was thinking of getting something other than a Nickel Cadmium this time, like maybe a Nickel Metal Hydride or a Lithium Ion. Do they suffer from a memory effect and do they last longer than Nickel Cadmiums? Which kind should I get and where can I find them, and are aftermarket battery packs good? Also, are they compatible with my NC-50 one hour Rapid Charger?

The rapid charge rate might be part of your problem.

1609. ICOM R2 vs Yaesu VR-500

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-01 00:00:00 UTC
From: john109.geo@NOSPAM!!!yahoo.com
Message-ID: <39d8944f.208976437@newsread1.prod.itd.earthlink.net>
Source record: 71111

Hello All,

Anyone have any experiences/comments they would like to share on these 2 scanners?

I am thinking I could carry something like this with me all the time and listen to radio or tv when not scanning.

I am specifically interested in the aspects of usability as the ICOM r2 doesn't have a keypad but the Yaesu VR-500 does. I realize this could be a "depends on personal preference" issue. With the ICOM if one is using all the time does the lack of keypad become a bigger pain or is the ICOM user interface a clever one with good shortcuts?

The way I look at it, the VR500 has the keypad and stores about 650 more freqs but weighs 2 more ozs and costs about $100 more.

Thanks!

John

Hello NG,

I am looking for a HF Amplifier in Southern California. I would like to purchase one before October 7, is possible. I am in Palmdale, and I would be will to pick up the unit. The amps that I am looking for are SB-200, AL-811, AL-80A, etc. Not the HIGHER powered ones. Just something that puts out 300-700 watts and runs fine on 110 VAC.

E-mail me or call me if you have one to sell of trade.

My E-mail Address is: radiotek@pacbell.net
Phone: (661) 272-6949

Thank You & 73,

Mike KQ6MU

What you need to do is provide a list by manufacturer and model number to the extent possible and then take closed bids on the equipment plus shipping charges. There is a tremendous variation in prices based upon the age and model of various items. Since you have no idea what you actually have, best to publish the mess here and let the guys sort it out!

I have a really nice Collectable Hammarlund HQ-170 AM/SSB/CW Receiver
for auction. This is a terrific piece of radio gear from its era. This
unit covers 80-10 Meters, Plus 6 Meters! Minus the WARC, of course.
It is in Great Condition!

It is ONLY at $1.00 and there is NO reserve!

Please visit:

I'm in the market for a deal on an older model ICOM 706.. I don't need the bells and whistles of the IIG or anything like that.. Now's your chance to sell that older 706 and go buy a new mkIIG.. If you have one or know someone with one, let me know a price to include shipping to Great Falls, Montana.

The Bergen Amateur Radio Assn (BARA) is holding
its Fall Hamfest next Saturday 10/7 at the FDU
campus off Rt 4 in Teaneck, NJ. Just minutes from the
G.W. Bridge.

It is the last time that BARA will be holding the
hamfest at this location, due to construction on the lot.

Visit www.bara.org for details.

4 sale a HENRY 2002A 2 METER AMPLFIER uses a 3CX800A7 tube, in excellent condition. I am the original owner. This amplifier was made custom for me. I used to work at Henry Radio in amateur sales for 9 years. The amplifier was made with a separate RF deck, and a separate power supply to fit into a small space in my ham shack. Works GREAT $1100.00 plus boxing, and shipping....

This, besides being meaningless, doesn't answer the question put forth to you.
What part of the statement do you disagree with?
"Are YOU the judge and jury?

Do YOU have enforcement power to enforce Federal Rule and Regulations
granted by Congress?"

These are the questions being asked. An inability or unwillingness to answer
would seem to me to be an admission of guilt.

Hy-Gain HDR-300 Heavy Duty Rotator

This has the heavy duty rotator with the digital readout inside the shack.

This unit comes with brand new rotor to control cable. I think there is 100 ft. but I will have to check.

The control unit is very clean and scratch-free.

Rotator needs a plastic limit switch part replaced. It is available from the manufacturer.

The control unit may need some work as the readout has quit working. I suspect one or both IC's.

Since the unit requires some repair work, I will sell it as-is at a bargain price of $100.

It can be shipped in two pieces but will probably cost $50 or more to ship because of the weight of the two units and the cable. Exact amount is dependent on your location from Atlanta, GA

Ok Chuck, I'll bite.

It's not mechanical problems with GM vehicles, it's all those damned squeaks and rattles that drive a guy crazy. I have owned a handful of GM vehicles and all of them were well over 150K miles before needing any serious repair. My current driver is a '93 Ford Explorer. Man, what an RFI nightmare. Ignition hasn't been the problem, it's that cheapo, wanna-be a real fuel pump that's the trouble. If I didn't like the vehicle so darned much, I'd trade it.
I like the new GM Jimmy/Blazer but when I sit in one sardines come to mind, not to mention the bump I got when I banged my head getting out of it. =)

Oh well, I sold the MKIIG and got a nice base rig. If I am going to take HF on the road, I'll just wait until I setup camp and then break out the laptop for a little PSK31...

Source record: 71059

The UHF side of the receiver is playing wild games with me. Whichever side of the display I show UHF, I get all kinds of numbers showing in the display, that generally bear no resemblance to UHF frequencies. If, by the law of randomness I get a UHF frequency, it seems to receive it.

Any clues of where to start looking first? I have both the owner manual and the technical manual for it.
I am somewhat knowledgeable of electrical engineering principles, but have never worked on these IC's type systems. Yes I am from the vacuum tubes times. Boy, does that put an age on me or what?

Thank you for any help.

> share on these 2 scanners?

I purchased a VR-500 this morning and I haven't been able to put the thing down all day! It's performance and feature set are pretty impressive for such a small radio. By the way, HRO will match the new AES advertised price of $259.

Since I had some time to kill, the guys at HRO let me try some different aftermarket antennas on the rig. I found that the Diamond RH77CA ($24) gave the radio a whole new personality when working weak signals. Even though the Diamond's whip is nice and flexible, it's certainly not as "stealth" as the stock antenna.

The VR-500 is easy to program manually, especially if you're familiar with other small Yaesu's such as the VX-5. If you intend to manage very many stored frequencies / alpha tags, you might want to take a look at the ADMS-3 software from RT Systems ($20).

Here are a couple of reviews I found valuable...
http://www.strongsignals.net/htm/revvr500.htm
http://www.strongsignals.net/htm/revr2.htm

...and here's a link to RT Systems.

1662. FS HyGain TH7DXX 7 element beam

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-02 00:00:00 UTC
From: Marvin Moss <mmoss@mindspring.com>
Message-ID: <8rbgca$ie2$1@nntp9.atl.mindspring.net>
Source record: 71061
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

Hy-Gain TH7DXX 7-element broadband beam antenna

All Stainless Steel Hardware with Aluminum elements/rods

20 meters 8 db gain
15 meters 8.7 db gain
10 meters 9.6 db gain

On the ground and disassembled into individual elements for easy transport
Boom length = 24 feet, Weight = 75 lbs.
Complete with boom, elements, traps, hardware, and
instruction/construction/assembly manual
Some elements will need work/cleanup and refurbishment of entire beam before
assembling is a must.

Sorry, but this beam can not be easily packed or shipped.

Pick up only in Atlanta, GA area for $100.

This 2 meter transceiver is in very fine condition, the microphone
somewhat less so. It has the extra cost DTSS (DTU-2) installed.

I am asking $145 + shipping and insurance which is $10 less than the
eBay average price for recent sales.

If you're interested take a look at what I will post on eBay mid week if
I don't sell it first:

1668. Hamfest - Howard County Fairgrounds, MD - Oct. 8 !!!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-02 00:00:00 UTC
From: Randy Krenz <randykrenz@erols.com>
Message-ID: <970501324.97999735@news.erols.com>
Source record: 71135

The Columbia Amateur Radio Association (CARA) presents the 24th annual
Howard County Hamfest. Come join the fun! Bring the family! Lots of amateur
radio gear, computers, electronics, and dealers!

Amateur exams will be given at no charge.

40,000 square feet of indoor display area. Inclement weather is not a problem!
Large outdoor and indoor tailgating area. Great food and refreshments on-site!

Where: Howard County Fairgrounds on Route 144 in West Friendship Maryland.
Take I-70 to MD 32 south to Route 144 west. The fairgrounds are one
block west of the 32/144 intersection.

When: Sunday October 8, 2000 (8AM to 3:30PM, vendors enter 6AM)

Talk-In: 147.135/R+ (No CTCSS required on the day of the Hamfest)

Admission: $5 per person (children under 12 FREE)
Tailgating: $10 per space
Tables: $20 (1-4), $18 (5 or more)
(Tailgate/Table prices include admission)

Tables may be reserved in advance by:
1. using our on-line registration system by following the link
at http://www.qsl.net/cara
2. emailing John King (kb3wk@arrl.net)
3. calling John King (410)465-6324 (evenings, voicemail available)

For more information, please write to:

CARA Hamfest Committee
P.O. Box 911
Columbia, MD 21044

or send email correspondence to: cara@qsl.net

or call Randy Krenz at (410)750-0379

See our Web page at: http://www.qsl.net/cara

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in
part on CDROMS, in bulletin boards, networks, or
publications which charge for service without permission of
the author. It is posted twice monthly on the USENET
groups rec.radio.scanner, alt.radio.scanner, and
rec.radio.info. It is also available electronically from
the rec.radio.scanner ftp archive on the official USENET
FAQ library ftp://rtfm.mit.edu/pub/usenet-by-
group/rec.radio.scanner.]

In the 1960s and 1970s, thousands of firemen and ambulance
squad members came to rely on their crystal controlled,
transistor Plectron and Motorola desktop monitor receivers.
They have now been replaced by battery operated portable
pagers, and the desktop models are often available at
hamfests in the $5 - $25 range. Since many are in rough
condition and need repair, a hamfest special is better
suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are
excellent for dedicated monitoring of local frequencies --
a task for which you wouldn't want to tie up your 400
channel programmable scanner. They are desktop models
which can be powered from 117VAC or 12VDC with the proper
mobile cord. The audio quality of a Plectron P1, Plectron
700 series, and Motorola Alert Monitor is far better than
any consumer grade scanner and the sensitivity, image
rejection, and intermod immunity is outstanding when
aligned properly.

Models and Frequency Coverage

The Plectron and Motorola Alert monitors are single band
receivers: VHF-low, VHF-high, or UHF. No single Plectron
or Motorola Alert monitor can cover the entire 30-50 MHz

band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the 700 and R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal

scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

The tape recorder inside the Receiver/Recorder employs two rubber belts. The Projector Recorder Belt Company makes replacement belts which work fine, though they may not be the original equipment:

1. PRB SCA8.6 (218 mm)
2. PRB SCQ 2.5 (64 mm)

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Crystals

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

The best source for crystals is:

International Crystal Mfg Co.
11 N. Lee Ave
Oklahoma City, OK 73102
tel. 405-236-3741, 800-725-1426

You need not bother with calculating the crystal fundamental frequency. Merely supply International with the exact receiver model number, printed on the rear label, and the frequency you want to monitor. They will perform the necessary calculations.

Crystals for Plectrons

The Plectron P1 series contain two crystals. The second local oscillator crystal is 11.155 MHz regardless of band. On VHF high band (148 - 175 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz)
= (station freq (MHz) + 10.7) / 4

or

Crystal frequency (MHz)
= (station freq (MHz) - 10.7) / 4

On VHF low band (25 - 54 MHz), the P1 series employ this formula for the first local oscillator crystal:

Crystal frequency (MHz) = (station freq (MHz) + 10.7)

or

Crystal frequency (MHz) = (station freq (MHz) - 10.7)

There are two crystals (Y1, Y2) used in the Plectron R700 series, one for each local oscillator. The crystal formulas are:

RF Range (MHz) Y1 (MHz) Y2 (MHz)
_____
25-29 (f+10.7)/3 11.155
29-32.6 (f+10.7)/3 11.155
32.5-35 (f-10.7)/2 10.245
35-41 (f-10.7)/2 11.155
41-47 (f-10.7)/2 11.155 (use 10.245 MHz
for Y2 on 44.62 MHz)
47-54 (f-10.7)/3 11.155
148-158 (f-10.7)/9 11.155
158-175 (f-10.7)/9 10.245
450-470 (f-10.7)/18 11.155

The economy Plectron 500 series use this scheme for the first local oscillator crystal:

RF Range (MHz) Crystal (MHz)

---

25 - 35 (f+10.7)
35 - 54 (f-10.7)
148 - 174 (f-10.7)/4

Most Plectron 500s use an 11.155 MHz second local oscillator crystal. However, a 10.245 MHz crystal is used instead for receivers in these ranges: 33.4 - 33.78, 44.62, and 158.78 - 158.82 MHz.

Power Cords

AC power cords for both types of receivers use unique connectors and are scarce. I published the pinout for both Plectron and Motorola Alert Monitor receivers in June 1998 Monitoring Times magazine.

You can buy the proper replacement power cords but it's much cheaper to drill a hole on the rear panel and solder on a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

Squelch and Minimum Volume Setting

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

Both Plectron and Motorola Alert monitor receivers are designed purposely to have a minimum volume setting which is still audible. The intent was to prevent firemen from turning the volume down completely, forgetting it was down, then missing an important call.

This "feature" was usually implemented by having a fixed value resistor in series between one end of the volume control and ground. In the R15X5, R14X5, R15X5, and R16X5, a 47 ohm resistor, designated R624, was inserted in series with the violet wire leading from the volume control.

You could decrease the lowest volume setting by decreasing the value of this fixed resistor. Alternatively, you could replace the resistor with a jumper wire to completely

silence the receiver at minimum setting of the volume control.

Tone Alert Feature

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair and Replacement Parts

Repair service and replacement parts for the Plectron P1 and R700 models is offered by:

Weber Electronics
PO Box 212
5138 Laurel Ln.
Broad Run, VA 20137
telephone (540) 347-7760
email: weber@citizen.infi.net

Alert Monitor parts are available from Motorola. Phone (800)422-4210. The part number on the service manual for my VHF-high band monitor is 68P81048A55-G and my VHF-low band manual bears part number 68P81050A95-D.

John Miller reports the current price is $5.70 for service manuals. Motorola advised John that Alert Monitor parts are scarce, with last stocked being in 1995, Knobs are no longer available, though there are many that would fit.

Plectron SM-series Scanning Receivers

Plectron also sold an SM series of scanners, manufactured in Japan by the same folks who made Craig (division of Pioneer) scanners. The SM series are consumer-grade models and are included in this article for the sake of completeness. They are crystal controlled radios and feature priority scan and a separate trimmer capacitor for each channel to net the crystals on frequency.

Band Frequency Limits

VHF-low 30 - 50
VHF-high 150 - 174
UHF 450 - 470 MHz

Table 4. Plectron SM Model Band Limits

Model UHF VHF-high VHF-low

SM-301 X X X
SM-302 X X

SM-303 X X
SM-304 X X

Table 5. Plectron SM Models

The crystals used in the SM series are quite different from the crystals used in the conventional single channel Plectron monitors. Here are the crystal formulas:

VHF low band:
crystal 3rd overtone freq = receive freq + 10.7 MHz

VHF high band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3

UHF band:
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / 10

Other crystal specifications for the SM series are:

CR 25/U holder
3rd overtone
20 pF load capacitance
parallel resonant
max series resistance 40 ohm
max drive 2 mW

Plectron Alternatives

Too bad Plectron is out of business. TCS Communications Corp. sells used Plectron receivers, in working condition, for $75-100. If you require crystals or reeds, TCS may be able to find some types/frequencies. Contact:

Terry Marengi
TCS Communications Corp.
tel. 1-800-TCS-XMIT
email: TERRYTCS@aol.com

If you wish to purchase a new receiver with "Plectron-like" signaling capabilities, contact Reach Electronics:

Reach Electronics
1311 West Pacific
Lexington, NE 68850
(308) 324-6661
(800) 445-0007
FAX: (308) 324-4985

Reach sells tone & voice pagers, Alert monitors, and ENCODERS. They also do contract manufacturing.

I currently have no Plectrons or Motorola Alert Monitors for sale. I'm hoarding them. :-)

john109.geo@NOSPAM!!!yahoo.com (john) writes:

>I am specifically interested in the aspects of usability as the ICOM
>r2 doesn't have a keypad but the Yaesu VR-500 does. I realize this
>could be a "depends on personal preference" issue. With the ICOM if
>one is using all the time does the lack of keypad become a bigger pain
>or is the ICOM user interface a clever one with good shortcuts?

It depends on what you want to do. If you want to preprogram a bunch
of frequencies and scan them, the lack of keypad means nothing. If
you occasionally tune to a random frequency and then listen for hours,
tuning the R2 is a minor inconvenience. If you spend a lot of time
tuning to frequencies that are not already programmed then you
really want a keypad.

>The way I look at it, the VR500 has the keypad and stores about 650
>more freqs but weighs 2 more ozs and costs about $100 more.

Other differences: the VR500 has an alphanumeric tag associated with
its memories, the R2 only displays the frequency. VR500 can receive
CW and SSB as well as FM (wide and narrow) and AM; R2 has only FM/AM.

The R2 performs many of its operations using a "FCN" key on the side
of the radio. It's very hard to press, and doesn't latch, so you need
two hands for most operations, and your thumb tends to get sore.

I have an R2. I don't have a VR-500, but I have a couple of ham HTs
that do have full keypads for frequency entry.

Dave

1671. Re: Kenwood R-5000/VC-20 VHF Converter?

Bought a VC-20 at Leicester-absolutely excellent. Cleanest AM of any set that I have had, plus the benefits of those filters.
Sensitivity very good, selectivity excellent, antenna used is the Isopole.

Roy

Hello Keith,
Many have taken it upon themselves and totally outside of my control to perpetuate some of the threads that are related to www.ab7sl.com .
Occasionally some of them merit a response from me. More often though I let them go with no response. I believe if you examine the threads you'll see this is the case.

Thanks for posting. 73 / DX

1674. www.ab7sl.com - 1 YEAR OLD !!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-02 00:00:00 UTC
From: Charles <charles@ab7sl.com>
Message-ID: <8ratv9$782$1@nnrp2.phx.gblx.net>

Greetings to all,

As of October 5 ,2000 www.ab7sl.com will have been on the web for a full year. This is a real milestone in the site's existence. www.ab7sl.com started out this time last year with 0 (zero) visitors and now has almost 16,500 visitors on the counter. The average visitor count per day is now at 55 visitors daily . There are nearly 100 entries in the guestbook now and several dozen user-added links on the Free-for-all-Links Page.

Many features have been added since the basic site went up last year. One of the most popular is The DX Page with the active and clickable DX Cluster Telnet links. I have received a lot of positive feedback on that. Another recent feature is the addition of the AB7SL Monthly DX Online Logbook. This page receives several updates - each day - depending on my activity and band conditions. It lists chronologically all the DX stations I have worked for the current month.

The most recently added page is the 3D-Art Gallery which showcases 3D art I have created with Bryce 3D graphics application. Besides the thumbnail for each image there are two popular resolutions available for download that can be used as desktop wallpaper.

www.ab7sl.com has grown tremendously over it's first year and I look forward to sustained and increased growth over the years to come. Thank you all for making www.ab7sl.com a great success for me and all it's users.

73 / DX

The easiest "cure" for noise in a Ford was to trade it for a Chevrolet!
LOL! No offense meant! That's how I cured my noise. I have have rarely
had noise probs in GM vehicles like I did Fords.

Well "WHO",

Everybody will have different opinions. If you are going to spend
a grand, you can get a brand new Icom 706MKIIG for just under a $1000
at a hamfest. I don't know about the FT-100. I bought the Icom because
a dealer had a really good deal at the Shelby, NC hamfest. ($979 US)
It, like the FT-100, has ALL bands and all modes, DSP, good noise sup-
pression, and many features I am just beginning to understand. It is
the second 706 I have owned, and I do like them, particularly for mo-
bile work. It really is a matter of knowing what you want the radio
to do, studying the features of various brands, and buying what meets
those needs. I also have a Kenwood TS-50 as a base rig, and I like it
as well for a basic HF base station. I have had very good results with
both brands of rigs. My original station was the FT757GX, which was
a fine rig as well. If you wish to economize, I am sure you can find
706s and/or TS-50s, as well as Yaesu rigs, for good prices. Best of
luck with your choice!

Hi Folks

I have a Heathkit SB1000 1Kw linear for sale. I have not used
this amp for 4 years.....it worked fine when I stored it.....but I'll
give no guarantees. I have the manual/schematics that go with it.
I'm asking $450.00 for the amp.

I also have a Timewave DSP-599ZX for sale. This unit is perfect
and as new. I have the manual for it also.
I'm asking $250.00 for the DSP-599zx.

I think that you are right. I have had 3 Fords and they all had problems with noise. 92 Bronco with the 5.0 V8, 98 Exploder with the V6 and now a 98 F150 with the V6. Put the fuel pump kit in the Bronco and that was a waste of time. The other 2 vehicles had ignition noise. Maybe I will learn one of these days. Go with a Ford and get the noise or go with a chevy and get mechanical problems(that should get a rise)

1686. Re: Use Radio Shack type dynamic mic for ham?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 00:00:00 UTC
From: pmb1010@my-deja.com
Message-ID: <8rdg1idbt1@nnrp1.deja.com>
Source record: 70999

I did hear that the newer ICOM rigs don't require
this (that's why I specifically said 746 and 775...)
and that the older models (765, 735, 745) do need the
pre-amp...
I am familiar with electret's (Rad Shack I've rebuilt
lots of mic's with), but they require voltage to operate,
and I have not checked what's on the lines on the rigs.
I did consider headset/mic combo, and adapting that, but
am again concerned about quality and level issues.
Thanks!
Vic

I have 5 of the type M68729 class C (i.e. FM) 30 Watts out average, 40 Watts max. These will replace older M57774 module just fine. The input drive is 300 mW for 30 watts out. I am asking $50.00 including shipping to conus for each of them them. RF parts wants around $70.00 for the same.
I will sell them all for $200, this is the equivalent of getting one for free.

These are brand new never been used and still have the one inch leads on them. I have 4 of them in a sealed rack and one loose.

Thank You,

Bryan Fields, KB9MCI

Well, Chas,

I can't agree with the mechanical troubles on Chevrolet, either. I went to Chevrolet for good after having several Fords that, not only gave me noise trouble (to the point that a radio was almost unusable), but left me stranded a number of times. I abandoned Ford for good in 1973 and never looked back. I've had 5 Chevrolets since that time (I used to trade just to keep up with the Joneses when I was younger)--two of which I own now. The '87 Celebrity station wagon I bought new in August '87. It now has 197,000 miles on it. It has never had the engine or transmission opened except for routine maintenance and they are both the originals. I replaced the OEM starter at 189,000, the OEM water pump shortly after. It has never quit except for a dead battery. Except for belts, brakes, several alternators over 13 years, I have replaced almost nothing. I did rebuild the front recently replacing the CV joints and the inner tie rods. It drives almost as new except for a couple squeaks in the rear I can't seem to locate. But I would drive it to the West Coast in a heartbeat. It doesn't tick, click or smoke.

The other Chevy is sort of a toy--a 1993 Lumina that I have put less than 30,000 miles on in the last 4 years. It is a Z34 that has proven to be reliable, mechanically sound, economical to drive, and just plain FUN. It is my Sunday go-to-meetin' car and it gets babied to death and both cars have always been garaged. The wagon is my "beater" that I drive every day, have my mobile ham rigs in, pull my lawn tractor with, haul lumber in, and even firewood! While Ford seems to be extremely popular, I can't agree that Chevrolets are prone to mechanical failure.

Since 1966, I have owned quite a few from a '61 to the '93 without having ANY recurring failures. The failures I had were with the Fords that had a habit of leaving me to walk back home. I learned to spell Ford backwards (D-river R-eturning On F-oot). LOL! I got extremely pissed at them after the fiasco with the '73 Mustang, and Ford's refusal to honor their tranny warranty. I cussed them out, stormed out the door, and traded down to a '69 Impala just to get rid of it! LOL! Funny, that 4 year old Chevy NEVER left me stranded NOR did it make ignition noise--and that was without doing anything to it.

It's what you get used to, I reckon!

Can anyone tell me where I might find replacement pilot lights for a Kenwood 130S? There are two: one for the dial and one for the meter. The service manual gives a part number but I doubt that Kenwood can still supply these (I sent them a message just in case). I'd like to use original equipment replacements if possible but failing that I'll stick something in that's close. Also, has anyone replaced the lamp behind the meter? Its kinda buried so I'd like to know the easiest way to get to it. Thanks - - Ray KC2FFT

Zsylvan+noZs_0009@Zcyberhighway.Znet.invalid (Sylvan Butler)
shared these priceless pearls of wisdom:
>
->>I'll look the answers up myself and post sometime this week.
->
->Thanks, I'd like to see the numbers.

Here are the numbers, admittedly absent the gawdawful dimensions of a thermal coefficient and all with a metric multiplier of 1E-3. However, for COMPARISON purposes they can be used quite easily.

The data is from the current edition of the CRC handbook...

Coefficients of thermal conductivity:

Mineral Oil 1.25
Transformer Oil 1.27
Automatic Transmission Fluid 1.32

Observation -- less than 5% variation between the three. Mineral oil is actually BETTER than transformer oil. ATF is cheap and easy to work with.

Now that you know the data, use whatever you feel like.

Hi:

I have a need for 5-10 Motorola UHF High-Power, 2 or 6 freq, with or without acc'y HT600's / P200 series radios. Looking for radios that have not been abused (but will consider most) if they have the Original Model/Serial tags on them. Minor repairs NO PROBLEM, and will make a fair and resonable offer of what you may have. Accessories a Bonus, but not required. Case damage / engraved NO Problem either. Just looking for raidos that are A-OK inside.

Sooooo, If you have some of these, and perhpas rather have a Maxtrac Mobile, or trade for something else, I have a pretty large warehouse of goodies I would be will to offer in exchange, or if all else fails, there is CASH.

Monty

1715. Re: Use Radio Shack type dynamic mic for ham?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 00:00:00 UTC
From: KA9CAR John Dewey <ka9car@xarrl.net>
Message-ID: <8rd6an$4rv$1@news.tribune.com>
Source record: 71094

Most ICOM radios require a high level microphone input, above what a Dynamic mic can produce. These radios Generally have 5 to 8 volt dc on the mic pin. The Electret mic in a $20 "computer" head set works very nicely on my Alinco. (different pattern plug but same input levels as Icom). I bought a plug and made up an adapter to plug the Mic into. THE MIC - IS NOT the same as case ground. I use a foot switch that goes in through the same connector. I routinely get unsolicited compliments on my transmit audio.

1719. Use Radio Shack type dynamic mic for ham?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 00:43:21 UTC
From: pmb1010@hotmail.com
Message-ID: <39D92BB4.7C09@hotmail.com>
Source record: 71063

OK, I'm a CW op. Getting ready for ARRL sweepstakes,
and want to hook up a mic to my HF rigs (Icom 746,
IC-775) for the phone part of SS.
ICOM sells this SM20 desk mic for $200. Radio Shack
has similar looking dynamic mics for $40. Heil sells
similar looking unit for $120.
Is there really any difference? I suppose a mic with
low impedence (500 or so ohms) is what the SM20 is?
Sure it has PTT and PTT lock, maybe up/down control,
but I can wire a button switch for PTT easy enough,
or even foot switch. And save a bundle of dough...
Want full rich audio sound similar to Yaesu MD-1 type
mic.
Anybody do this? Comments?

Vic

1720. Re: old amateur radio equipment acquired

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 01:10:35 UTC
From: Bob Miller <bamiller@texas.net>
Message-ID: <eDDZOaNUtdp=ttb+Ehva8ZDJpb3D@4ax.com>
Source record: 71064

Is there a brand name on the unit? Any words on the front of the unit?

Is there a model number on the unit? Any letters and/or numbers on the front of the unit?

Is there a serial number on the back of the unit?

Is there a "Manufactured by __________" reference on the back of the unit?

This info will go a long way in helping you to sell your mystery radio.

No one's going to buy it if they don't know what you are selling.

Best regards,

Bob

1721. Help with tuning an Ameritron amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 01:21:50 UTC
From: Larry Bratcher <LABratcher@worldnet.att.net>
Message-ID: <OwaC5.160$Pw1.9541@bgtnsc04-news.ops.worldnet.att.net>
Source record: 71065

I always heard that the only stupid questions where the ones that you didn't ask! With that in mind, here's my situation and questions
I have a Ameritron 811A amp that I really don't understand how to tune properly. I've read the instructions, but to me they lack some detail. I've blew one tube already and don't want to blow another one. By the way, the amp is connected to an Icom 746 via the Ameritron relay to protect my radio. Could somebody detail the proper tuning, from everything to best CW speed for tuning to exactly what I'm watching for on the plate current, grid current, and my power meter? The instructions give suggested ranges such as load at 5 and plate at 8 for 40 meters and these seem to be the correct settings (I think). The amp is modified for 10 meters. What settings would I start with for 10 and how do I know it is in tune (actually, how do I know it is in turn for any band). If it matters any, I run SSB, not CW but I understand you tune with CW and thrn switch to SSB.
Another question is what would be he optimal power I should run with the 811H? I guess I need all the education I can get about amplifiers!

Thanks in advance for your help

Larry

1722. WTD: Information about "Info-Tech" M-300 keyboard & M-200E RTTY Interface

Newsgroup: rec.radio.amateur.equipment

Source record: 71066

Hello,
Name here is Joe (N3IBX) and I just acquired a Info-Tech M-300C RTTY keyboard and a M-200E interface. Does anybody out there have a manual to one of these units for sale or could possibly explain to me how to hook up the CRT/Keyboard/Interface etc. for RTTY operation? Any information will be greatly appreciated.

I just acquired both units at a local Hamfest for $5.00 and just couldn't resist them to get into RTTY.

Thank you for reading this and 73 de Joe Cro N3IBX

Message-ID: <OlbC5.146$_G1.3711@typhoon.pompano.mediaone.net>
Source record: 71067

Selling A Third Generation VX5R with Freeband Modification Transmit
Expanded Frequencies, like new virtually with no use.

The pakage includes:

1 VX5-R Tranceiver on original packaging and warranty card
1 Altimiter-Barometer O
1 Lihium-Ion Battery Charger
1 Additional Lithium-Ion battery pack
1 Cigarette Lighter Cord
1 External antenna adapter (BNC conversion)
1 MFJ-1715s Super Flex ThinDuck High Gain antenna

All for $400. plus shipping.

1725. Tunable VHS VCR Cheap!

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-03 02:44:37 UTC
From: 72121, 77@compuserv.com
Message-ID: <39d94786.10076285@NNTP.ix.netcom.com>
Source record: 71068

Have an old RCA VCR from the early 80s. Still works fine, but a real boat anchor by todays standards.

I understand the tuning wheel tuner can be used to move VCRs of this type to amateur ATV frequencies.

Anyone wanting it (cheap to a good ham home) can contact me. Its heavy - I live in Gaithersburg, MD.

1739. Commands for ICOM R8500 - need help !

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-04 00:00:00 UTC
From: gr2@katamail.com
Message-ID: <20001004081752.14637.cpmta@c000.muc.cp.net>
Source record: 71017

Hi there,
I am trying to write a program to be able to read (write) a simple text file and write (read) into R8500 memories.
So I am playing with the Control Commands as showed in manual (pag. 35/36).
Well, I tried for instance to send the string x'FEFE4AE01007FD.
This string set Tuning Step to 10 Khz: it works fine.
Also I tried to send the string x'FEFE4AE01110FD.
This string set Attenuator to 10dB: it works fine too.
Then I tried to set the operating mode to AM sending: x'FEFE4AE0060202FD
but this (and other modes too) doesn't work !
Now, is there any errors into the manual or am I doing something wrong ?

Also I didn't understand how to read back and set a frequency or read back and set a memory...

By the way, I am writing the program with the old QBASIC, opening COM1 to 9600.
Is there anything wrong with that ?
I don't understand why I can easy handle some commands while other commands do not work...

I would like to exchange info with any R8500 owner's that like to play with software too. Thanks in advance.

May I have some help from ICOM ?

Gio.

Thanks to all that answered my post. I really learned a lot from you guys. Unfortunately, my roof started leaking last week-end so I guess I'll spend a good part of my budget on it.

I'll keep your messages as I will probably have enough money to buy a rig early next year...

Once again, thanks for the help.

Stay safe !

Blew how?
1. NEVER tune more than a few seconds, resting (Cooling) for 30 seconds.

> By the way,
> the amp is connected to an Icom 746 via the Ameritron relay to protect my
> radio.

How does a relay protect the rig?

> Could somebody detail the proper tuning, from everything to best CW
> speed for tuning to exactly what I'm watching for on the plate current, grid
> current, and my power meter?

Start with LOW drive into the amplifier.
Turn up the drive until things start to react in the amplifier.

> The instructions give suggested ranges such as
> load at 5 and plate at 8 for 40 meters and these seem to be the correct
> settings (I think).

With MINIMUM drive, turn the TUNE knob for a dip in plate current
or maximum output.
Then adjust load for maximum current or output.
Back to TUNE knob, (They are interactive.)

SHORT duration tuning!!!

Hi Hamish...

You are right, I don't need a weekly reminder about the site as I have it bookmarked. However, there are new people subscribing to this and other newsgroups on a daily basis who may have never seen one of the posts before. I suspect that is the precise reason why the posts show up frequently. I am always on the lookout for good ham sites, and there are many new ones appearing every day. This is one resource for finding out about new sites or existing sites that I wasn't aware of. Therefore the weekly posts (or whatever frequency they are, I don't count them) don't bother me. My cursor keys work well, so I can choose to scroll right on by any post I don't want to bother with. Included in the posts that usually get this treatment are the VERY frequent childish exchanges of insults and name-calling from people who obviously only like to practice their typing skills. This is a ham dx newsgroup...If someone has a site that will point me to a good new source of information about ham/dx, then I look forward to hearing about them. I don't mind repitition once a week... I DO mind 10 posts daily about how once a week is too much though.

I carry a Z34 around for ballast in the back of my SD F250 with the
turbo diesel.

Unfortunately, the turbo diesel has noise exactly like ignition noise.

It comes from the injectors, which have a 1000 volt pulse generated
when the voltage is removed to close the injector!

Mechanically, I've never had a problem and have driven Ford trucks
since 1980. I quit buying GM in 78, after getting screwed on a new
Monte Carlo V-8 with a 4 cylinder transmission and factory installed
rust under the paint. That car had a cam lobe go flat in 1980, at
52000 miles. Since it had holes in the body (the friggin ROOF none the
less), I got rid of it..

I have not tried or even seen reviews on the 2 specific antennas that
you mention. But I know just enough about antenna theory to be
dangerous so I am going to throw out a few thoughts for your
consideration.

1. Get an ARRL antenna handbook and read the sections of it that are
pertinent to the type of operation you do. This one simple action will
go a long way to help you understand why your signal is what it is on
the air.

2. When I talk to other hams, their vertical antennas often do not live
up to their expectations. Verticals seem more suceptible to vagaries of
poor local terrain than wire or beam antennas (which can be raised
above the terrain where the vertical almost always has to be mounted on
the ground).

3. Radials are the "other half" of a vertical antenna. A poor radial
installation lowers antenna resistance and therefore efficiency. Many
watts into the antenna yields just a few radiated watts. A " no-radial"
vertical must be bending the rules and paying the price, I think.

4. My guess is that "no-radial" verticals use some form of a
counterpoise to capacitively couple to the ground. How well this
actually works, I can't say. But it flies in the face of the lttle
theory that I know and I am suspicious.

Caveat emptor. If I was you, I would go carefully before actually
spending any money.
Good luck.

Tom,

You couldn't have a Z34 in your Ford truck! You'd never be able to
CATCH one! LOL. And even the Lightning series wouldn't be able to
catch one on a crooked road--it'd turn over while the Z34 took the
S turns with ease. LOL!

Everybody's experiences are different. Mine just happened to be bad
with FoMoCo. I didn't like being Found On Road Dead! LOL!

Currently, I am having a hard time ignoring the Chrysler PT Cruiser!
Turns my head every time.

Best 73 to ya,

Jerry

Do you have an utput meter?

> I've blew one tube already and don't want to blow another one. By the
way,
> the amp is connected to an Icom 746 via the Ameritron relay to protect my
> radio.

I'm going to make a wild assumption and assume that this is the external
keying circuit so that the exciter does not have to handle the current
required to key all the relay(s) in the final.

>Could somebody detail the proper tuning, from everything to best CW
> speed for tuning to exactly what I'm watching for on the plate current,
grid
> current, and my power meter?

Does this particular amp have a "tune" position?
The old Dentrons did and it was essential to tune them in that position
rather than at tilt. The reason being that they used a doubler in the plate
supply and full power took the supply voltage down too far to properly tune
them with full carrier in the full power position. My MLA 2500, and DTR2000
ran something like 25% more power out after having been tuned in the tune
position, rather than full power.

Amps such as these can easily be tuned up using an output meter while
monitoring the grid current.

They are seldom sensitive, or fragile. That makes them far different than
the Tetrode and Pentode amps which require far more care.

> The instructions give suggested ranges such as
> load at 5 and plate at 8 for 40 meters and these seem to be the correct
> settings (I think). The amp is modified for 10 meters.

The "modified for 10" is really misleading. There really isn't a
modification for 10, although that is what most call it. The only

requirement is moving the stop on the band switch with no change to the actual cuitry.

> What settings would
> I start with for 10 and how do I know it is in tune (actually, how do I know
> it is in turn for any band). If it matters any, I run SSB, not CW but I

Again, does this amp have a tune position?

> Another question is what would be he optimal power I should run with the
> 811H? I guess I need all the education I can get about amplifiers!
>
Does it have one or two tubes?
Actually it doesn't matter a lot, the tube will run just so much power without being over driven, or mistuned.

BTW 811s usually run with a bit of color showing. At least all the ones I remember did.

I hasten to add that the following is the way I usually tune a grounded grid amp.
I use the internal meter to monitor grid current and an external meter to monitor ourput.

First I use the tune position if the amp has one.
Actually, I first connect to a dummy load. <:-))
I increase the carrier from the exciter to show just a little grid current.
Then I rapidly adjust the tuning and load controls for maximum output.
If you are a bot slow in the adjustment, I'd let the amp cool for about 30 seconds to a minute.

After tunning switch to read the plate current as they may list a maximum allowable plate current. Then switch back to the grid current position.

Then increase the drive a little more (the manual should give the maximum allowable grid current---don't go that high)
Now readjust the tune and load controls for maximum output. Remember that these two controls do interact so you have to go back and forth between them.
You will reach a point where if you increase the drive not much happens on the output. Back off on the drive till you see the ourput fall a bit. Here the output and drive should act as if they are directly tied to each other.

Be careful when getting near maximum allowable drive which if probably far less than your exciter can put out.

You should get to the point where you know the settings and drive and will be able to tune in just a couple of seconds.

Best of luck,

Roger (K8RI)

Why do all these my-deja.com domains bounce email???

Ray -

I've had my 130 for nineteen years with no problems, not even a burned out pilot light!

Anyway, users in the past of the 130 suggest the Radio Shack 272-1141 bulb, but it is no longer available from R/S. Without my knowing the physical size of the bulbs, I can't make any recommendation, but R/S sells several that may fit. I suggest you use a 14V bulb if you run this radio mobile. Check the R/S 272-1154 and RSU 11338639 for fit.

The VFO bulb is replaced by removing the top cover and is situated in a small grommet just behind the analog frequency dial.

The meter is more complicated; you have to remove the VFO and bottom cover. The bulb is in the back of the meter and can be accessed with long nose pliers.

Both bulbs have wire leads; you'll have to clip the old bulb out and resolder the new ones to the power leads.

It'd be a good idea to lubricate the bulb body with a very small amount of silicon grease to facilitate replacement in the grommet.

Good Luck & 73

This is really amazing. In the late '60's and early '70's I lived in an apartment very close to a moderately busy street, and my main antenna was a ground mounted vertical. Most cars going by didn't bother me, but sometimes I could hear ignition noise from one a block away, and it was overpowering as it went by. These noisemakers were invariably Fords -- just like Jerry said. I guess some things never change.

While you're waiting....look at some of the older rigs; especially
those with either glass finals or pre-warc bands (or both). If they're
in good condition, they can be great performers, and are usually
available for a song locally.

I occasionally look at the newer stuff, but I keep using my Kenwood TS-
520 or Icom IC-701. Add some wire, a bit of feedline, and an old MFJ
tuner, and you're in business.

Yea, that PT is pretty neat looking, but I was surprised how small they are when I finally saw one in person. Not as big as I was expecting from the ad's. Myself, I drive old beaters here, and have both ford and chevy. Have an old 68 ford f-250 that I've been kinda restoring. It has very little rust and was garage kept all it's 32 years. I drive it the most lately. Also have an old 81 chevy MC. I've been driving that thing for years and years it seems and I can attest to Tom's statements about the paint on GM cars. Fairly pathetic. The paint has peeled something awful on that car and looks terrible. But, the car still drives almost like new and has never left me stranded once. It's the car I take if I want a smooth highway trip. I do most the work myself. Thats why I can get away with old beaters. Half the parts on both vehicles are almost new. I keep thinking about springing for a new car, but I'm just too cheap. And I'm not one that needs a fancy car to feel stylish. A new car is one of the worst investments of money you can choose. I save 1000's every year from driving beaters. 100's a year just in insurance. Also I just like old cars anyway...I have a sickness for old trucks. I've had quite a few of those. I once had a new chevy Z-28 about 20 years ago. Real nice.. But it drove me crazy trying to keep people from dinging it up, etc. Seems like the first 2 weeks I had it I got 14 small door chips. Would drive me ballistic. My brother later totaled it when a dingbat slammed into him on the freeway... I don't have to worry as much with the beaters. MK

1758. Continuous Duty 2 meter xmitters

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-04 00:00:00 UTC
From: bgudgel@eskimo.com
Message-ID: <8rftct$bs4$1@eskinews.eskimo.com>
Source record: 71036

Our group is looking to change out our remote transmitter/exciter
which is now an old Micor rack unit (compastation). We need
to swap it for a 'Continuous Duty' unit of some sort. Fans seem to
make it work for about a year, max before it degrades too much.
Anyone have any ideas on what is good in the commercial or amateur market
these days? I am hearing that some of the complete packages are only
good for 25 Watts. I suppose we could use a separate exciter/power amp
if needed. Would be nice to find a 100 Watt or so exciter power amp
all in one. I just don't know what's out there and what has worked for others.

Thanks,
Bob Gudgel

Mark,

I know the feeling exactly. And I don't worry so much about putting holes in the old ones for antennas. My wife (ex) used to say when I'd come home with a new car, "WELL, I guess you're gonna poke holes in this one, too, for them dumb radios". LOL!! Ever heard that from an XYL before? I betcha most of the hams in here can relate to that!

I used to think I had to have a new car every other year or so, but time "heals" all wounds (pocketbook) I never thought I'd keep that "new" 1987 Celebrity for 13 years, either. But it still runs just as well as a new one, it's long since paid for, and if I want to stick another antenna on it, it doesn't exactly hurt anything.

My ex-Mother-in-law bought a 1980 Monte Carlo in '80, and just recently sold it after voluntarily surrendering her drivers license. She realized that at age 86, she just wasn't as sharp as in her younger days. The Monte still looked as new, no rust, and, with a good wax job, would look great. It still drove as new, smoothe and quiet, with---get this- 37,000 ACTUAL miles. The interior was like new. I should have bought it myself, but can't justify 3 cars. I ain't getting rid of my Z34.

BTW, have you ever seen people that put antennas on their cars for no reason? One or two radios and 6 antennas all over the trunk? I know someone like that! Going down the road, his Aurora looks like a moving field of sawgrass!! I can remember the days when a ham might have 4 or 5 separate radios in the mobile. But now, with the multi-band rigs and antennas, one can get by with no more than 3. I have 2: HF and 2M/440. I think it is so silly to "decorate" one's car with antennas when 1 or 2 will do. LOL!

From: Gary <gbaker@pacifier.com>
Message-ID: <39dbc12e$1_2@news.pacifier.com>
Source record: 71044

Hi all,
I am considering on purchasing a Icom 735 and had a few questions that I hope can be answered.

I would like to work 10 meter FM and would like to work some of the repeaters.

Question: Does the 735 have fm as a option in which you have to add on a board or is this somthing that comes with radio from the factory?
How about a squelch function?

Some of the 10 meter repeaters require a tone.

Question: Does the 735 have the tone option from the factory or do you have to purchase a tone board? Will the tone board work all the tones or just one?

Any information would be appreciated!!
Thanks and 73

I knew I would get a rise out of you Chevy lovers. I had a 92 Z34
also. Actually I have had 2 92 Z34's. The first one only lasted 2
weeks because of a screwed up neighbor kid who decided that it looked
better burnt to a crisp. Almost burned the house down too because it
was in the garage when the little dirt bag set it a blaze. Went down
with check in hand and got another. Wish I still had it but houses
come before pleasure.

I have a Collins KWM-1 transceiver, 516F-1 Collins matching power supply for the KWM-1, original box for the KWM-1, Astatic SSB head desk microphone wired for the KWM-1, comes with the original manual also. I also have the original bill of sale.

This station was bought be me from the ORIGINAL owner he purchased it new in 1958. I also have the matching Collins 312B-2 station console (Rare Item). The KWM-1 was worked on by Wayne W6IRD. If I was to rate this one it would be a 9.6, but remember I am very conservative with my grading.... $3600.00
CCA Very good (cleanest one I have seen)

Please look at the web page below for pictures

Waal,

It's all in what you get used to. The Z34 is quite a cream puff be-
cause I refuse to take it out in the rain even--unless I get caught
out. It is just fun to drive. On trips, it is very comfortable and
gets right at 30 MPG--even with the 3.4L engine. People think because
it's a 6 cyl, that it won't really get up and go, but it will. I just
don't do that, but it's nice to know that I CAN, and it is handy in
tight passing maneuvers.

All joking aside, I don't know what it is about Fords and ignition
noise. It seem to always have been that way. When we used to run
AM rigs back in the '60s we could tell there was a Ford passing by
because of the pulse noise in the receiver--increasing in pitch and
speed as the driver shifted gears, slowing down when he pressed the
clutch. Look out the window, VOILA, there'd be a Ford going by. LOL!
It still happens to my 706 in the car. Some Fords make no noise, others
completely blank out the receiver.

If you are having trouble with noise, I wish you the best of luck in
curing it. Glad we can razz each other and have a little fun.

Hi,
We are two students in fifth grade in the province of Qu&#65533;bec. For our Physical 536 course, and more particularly for the Expo-Sciences 2001 (http://expo-sciences.sympatico.ca/), one of my best friend and me have thought of making a study on Radio waves. For a demonstration, we have thought to make a radio receiver and a radio transmitter. All of these don't need to be very powerful: 5 to 10 meters of operating range should be enough... Once assembled, it could be looking like as follow: A CD-Player is plugged in plugged in a radio transmitter and, some meters farther, the receiver plays the created music with the help of two or more speakers.

To do that, We would like to know where we could find plans to realise by ourselves the receiver and the transmitter. Is this possible?

Just for you to know, because it will be one of our first electronic projects, if you know some other Web Pages that could be useful for us and our work, don't be shy and please share them with us!!!

Thank you in advance for your help,

Pierre-&#65533;tienne Messier et Jean-Fran&#65533;ois Bernier

Jim,

I have been using a Cushcraft R7 vertical antenna for almost 10 years. It does use counterpoise radials (a group of 7 stainless steel wires sticking out from the base). No, it doesn't work as well as a beam, but I have worked DXCC with it and for the price, it is a super performer. I swear by it more than at it! The R7 isn't made any more, but has been replaced by the R8 which does 6-40 meters.

AES sells the R8 for $400.00. More information about this antenna can be found at http://www.cushcraft.com/amateur/r8.htm

Surprise! The D-model has the same problems as the original model. Do some research and you will find this out. I get both the FT-100 and the IC-706x digests, and I see the same problems reported for the "D" model that have been reported for the original version.

I think you can get these digests by subscribing to

Hello!
Our Fire Department has recently had a low band Motorola Mitrek donated to us so that we could sell it and raise a little money for the department.
The radio is a 4 channel, 110 watt, 39-50 MHz, with an extender (noise blanker) and is set up for tone squelch.
The info on the data plate is:
FCC Xmtr Data: CC1155
FCC Rcvr Data: RC0214
Model #: T81JJA4900DK
Ser #: 433HJY1476

If you would like to see a few pictures of this radio and accessories, please visit:
http://www.haworthfire.com/mitrek.html

If you have any questions, please feel free to contact me by e-mail or phone (# on website).

Thanks for your interest!

1787. Help with tuning an Ameritron amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-05 00:00:00 UTC
From: n4dh@juno.COM
Message-ID: <20001005.152814.-96067.0.n4dh@juno.com>
Source record: 70972

The mod for the Ameritron AL-811H is more than you mentioned.
It involves cutting a grounding wire going to the 10 meter input coil.
The wire grounds the 10 meter input tuned coil which in turn will
not let you drive the amp in the 10 meter posposition. As for tuning the
amp, the instructions are quite clear in the manual.

Try using a dummy load. You also need the antenna to be
resonant. The amplifier is not an antenna tuner. If you have a G5RV,
or some other non resonant antenna you will need a tuner. Resonant
antennas work best. The proof is in the signal strength the operator on
the
other end sees and hears.

The 811A tubes are pretty rugged, and there's nothing wrong with the amp
you should not be able to damage the tubes unless the amp is way out
of resonance, or you have no antenna or one that is not resonant for the
frequency you are using.

I bought one for my Icom R2, and it fortunately sacrificed it's life as I sat down in a car with the rig and
antenna in my pocket. (I use a telescopic whip).
It saved the SMA connector from getting ruined.
I've been using my second one now for about 6 months, and it works fine. I even have a third one as a spare in
case
I do something stupid again.

Since the D only came out a month or two ago, I doubt whether any
owner is going to give you much of a discount over the
new price -- unless there's something wrong with the rig and they want
to unload it :-)

Think about it...

Just as an aside,
I own 2 706's, the original version and the MKIIG. I must say I am
pleased with both of them. I sent the old one off to have it gone thru
in preparation for sale. It works OK, but I don't like to sell some-
thing unless I know everything is up to spec.

1797. Kenwood TS-50 Serial interface: Why so expensive?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-05 00:00:00 UTC
From: "James A. Sullivan" <sja6@uswest.net>
Message-ID: <39DCFC7F.172A5B35@uswest.net>
Source record: 70982

I recently purchased a TS-50, intending to use the computer interface features, but at $89USD I am looking for alternatives.

Either this isn't a RS-232 interface or Kenwood marketing is after the rich and gullible with this price.

Can someone enlighten me?

1798. Tektronix 1502 TDR cable tester problems?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-05 00:00:00 UTC
From: plalbrecht@aol.com
Message-ID: <20001005182959.08537.00000565@ng-cj1.aol.com>
Source record: 70983

I have a Tektronix 1502 TDR cable tester. I don't have a manual, so I can't tell if I'm doing anything wrong, but just turning it on does not give me a trace on the scope. (Played with the usual focus, intensity, position knobs). Am I missing something, or is this thing broken?

I would like to get rid of it. I know what they go for commercially, and this one appears to be in good shape cosmetically (i.e. not used as a football), but I'd like to determine its functional condition before I over- or undercharge for it. If it's broken, I want to sell it as broken/needs repair.

Thanks in advance,

Pete

Source record: 70985

I like mine. I've had good reports on the audio. Receive audio sounds good also. The receiver seems good. No dropping of the receive signal when it gets hot. I've seen many VHF rigs do that. I think you could drive over it. Seems well built. The only bad thing I noticed was 40 watts out, not 50. I had a FT-2500M with a possible mike problem and thought I could use the mike with that rig but it's a 6 pin plug not an 8. I'm very pleased so far. Had it about 2 months. I don't run it much at high power so not sure if there's any problems there. Tom kd1yq.

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Gary, the 735 has FM capability built in, and puts out a full 100
watts in that mode, so it'll hit the 10m repeaters fine.

The Icom also has a front-panel squelch function, and it has 12
memories that you can load your repeaters into.

The 735 requires the optional Icom UT-30 Tone Encoder to do tones. It
it still sold, and I see AES has it at $55.95. I have no real info on
the tone encoder, other than it is an 88.5 hz unit.

For further info, the 735 was reviewed in the January 1986 QST, and
the review is at the ARRL's site, in the members-only area.

1813. FS: SMA-TO-BNC PROTECTIVE ADAPTER

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-05 01:24:04 UTC
From: gulyas@netzero.net
Message-ID: <8rgl7f$11c$1@nnrp1.deja.com>
Source record: 70955
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.scanner

If you have a need for an SMA-TO-BNC antenna adapter that is custom made to fit and protect your H.T. or scanner radio, I have the solution.

Adapter allows you to:
Quickly change antennas to base,mobile or different style use.
Use the more popular and wider selection available of BNC antennas.
Prevent chassis connector wear or from coming loose due to antenna changes.

Adapter features:
Gold contacts with a teflon insulator.
A low profile design with a rubber covering for a factory antenna look.
The rubber base seals to the top of the radio with no spacers needed for moisture and dirt protection.
The base provides an excellent support for any length of antenna or application.
No need to remove adapter once installed to make a quick and safe antenna change.

Sizes to fit radio models:
Yaesu: VX-5, VX-1, VX-10, FT-50-R
Icom: IC-T8A, IC-T81A, IC-Q7A, IC-R2
Kenwood: TH-D7, TH-G71
Alinco: DJ-V5
Standard: C508A, C510A
Radio Shack: HTX-200, HTX-400, HTX-245
Aor: AR-16

Previewed in the May 2000 Issue of CQ Magazine.

$11.95 + $1.50 S+H(One to unlimited)
(Check or money order only in U.S.Funds)
(Specify radio model)

I used to use a Micor mobile at 140 watts (pushed to the max) with two fans.
Never had a problem with it. Unfortunately I can't say the same for the
controller or cans. We used it for the regional repeater.

It was a relatively simple conversion with only having to pull a few
jumpers. But, that was well over 10 years ago, and I don't remember the
procedure.

1820. Re: Late Model HF Tranceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-06 00:00:00 UTC
From: Roger Halstead <rdhalste@tm.net>
Message-ID: <9vfD5.114$Xe.18466@newshog.newsread.com>
Source record: 70904

If you hit the swaps and don't limit your self to five years, you should find some of the early (pre WARC bands) Yaesu, Kenwoods, and Icoms for less than that and they made some nice rigs back then.

Those rigs should run some where between $300 and $500 at swaps. Make sure to test the rig before giving up the money.

Then there are the hybrid rigs that were solid state, except for the finals, which may be 6146s, or sweep tubes. Both work quite well. Again, these are not old enough to be expensive, but some do think they are made of gold.

So, hit the swaps stay away from the stuff that is really collectable and be patient.
However you might find a bargain most anywhere.
Prices are even coming back down on e-bay for the most part. I'm seeing more and more rigs where the minimum bid, or reserve is not met. In general though, their prices are much higher than the local swaps will be.

Good luck,

For example on rec.radio.amateur.swap there is a Kenwood 430S for sale.
Think it was $375. http://www.timhavens.com/n1rz/rigs/for_sale.htm
Nice looking. I used to have one and was quite happy with it at the time.
I mention this as I ran across it about five minutes after reading your
post.

1823. Re: FT IC 746 for FT100

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-06 00:00:00 UTC
From: "Leland C. Scott" <no-spam@junk-mail.net>
Message-ID: <strjpv49ipmq5c@corp.supernews.com>
Source record: 70907
Cross-posted to: alt.ham-radio.vhf-uhf,rec.radio.amateur.equipment,rec.radio.swap

I was in the market for a mobile rig about a year ago so I was looking at the FT-100 and the IC-706MKIIG. After doing a lot of research I got the IC-706MKIIG. I'm not sorry I got it after continuing to read about continuing problems with the FT-100 series. The current problem is oscillation problems in the output PA, which has been reported for both the original model, and now the current "D" version. This PA problem has prevented operation on several of the upper HF bands because it shows up as the infamous "High SWR" icon on the panel display.

The FT-100 may have over 300 memories, but there is no way to maintain them using a rig control software package. A number of users are thinking about putting the screws to Yaesu to get them to supply a new microcontroller that supports up loading and down loading those memories to a computer. Right now there is zero support in the rig's firmware to do that. All their other rigs do, oops.

Remember Icom has been making these mobile multiband multimode rigs far longer than Yaesu has. With the current "G" model Icom has just about got everything right, while Yaesu is still learning.

The only attraction I can see with the FT-100 is its ability to operate using the ATAS antenna system. The rig works with the antenna to automatically tune to the band in use. I which Icom had something like this that works. Unfortunately even some of the ATAS owners have had problems. The antenna mechanics fail from water seepage through poorly designed seals, and intermittent SWR problems because the spring clips inside don't have enough pressure to maintain contact with the loading coil, while you drive over rough roads.

1825. FA: LAST DAY! National NCL 2000 2KW HF Amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-06 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <39de072d.76804358@news.pacbell.net>
Source record: 70909

Here is possibly a good deal! I have a National NCL 2000 2KW HF Linear Amplifier for auction. It is in great/excellent Shape! I even have the original manual, and some other documents. It covers 10-80 Meters.

It is ending today and there is NO Reserve!

Check it out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=454222979

If it does not totally load, press your "STOP" button to bid. Our auction hit counter, Honesty, is having some problems. So, it will be accessable and then it may not.

Thank You & 73,

Mike KQ6MU

I am looking for an original owners manual for an Icom IC-R100
Communications Receiver. I have a good copy but would like to have the
factory original. Please E-mail me if you have one you would be willing
to sell.

1828. FA: CHEAP! Hammarlund HQ-170 HF/VHF Receiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-06 00:00:00 UTC
From: radiotek@pacbell.net
Message-ID: <39de102a.79106172@news.pacbell.net>
Source record: 70912

Here is a nice Collectable Hammerlund HQ-170 HF/6 Meter All-Mode
Receiver that I for auction. This receiver was made around the
1940s-1950s. It works great! It covers:

1.8-2/3.5-4/7-7.3/14-14.4/21-21.6/28-30/50-54 MHz

Modes: USB, LSB, CW & AM

I will include some documentation with it if I can locate it.

It will be ending tomorrow and there is NO reserve!

Check it out:

http://cgi.ebay.com/aw-cgi/eBayISAPI.dll?ViewItem&item=454738268

Thank You & 73,

Mike KQ6MU

1829. FA: Azden PCS-2000 2 Meter FM Mobile Transceiver

Icom also sells a less expensive desktop micropone, the SM-6, $119 at
AES. It's listed as one of the accessory microphones under both the
746 and 775.

I was under the impression that all the Icoms require a pre-amp in the
mike, but then, I'm not really keeping up with the latest models from
Icom...

Rat shack has a condenser mic, manufactured by Shure, in the $50 range. It takes its power from an internal AA cell. I get tons of unsolicited 'great audio' comments using these mics on the Icoms and Yaesus (and the Hallicrafters)...but it's a little too 'high endy' for the Kenwoods.

Well, I finally did it. I signed up for the 50K Club! You can too.
It's only $10 in PayPal money, so I said "What the heck!"

This is brand new, and all you need to do is sign up 10 people who sign up 10 people, etc. If you can do that then you should have $50,000 in your PayPal account before it's all over.Yes,I said FIFTY THOUSAND DOLLARS!

Start now, and whatever you earn is put directly into your PayPal account by your downline. Nobody receives money ahead of you. Someone joins, and five minutes later it's in your account! It's unreal!! Fill your checkbook!! No more building downlines for someone else. What you earn you get! You are thinking maybe you have seen a program like this one before?? You haven't!! There hasn't been one like this before. What makes this Club different is that it works!

Guaranteed!!You start getting paid with your first sign-up. Plus, every sign-up and every payment is verified so no one can cheat or short-change the system! YOU WILL GET PAID! How much money you make is up to you! Need $10,000 in the next 10 days?

You can have it if you get going immediately! You must take a look at this and get started NOW! Take control TODAY!

This is brand new, so join RIGHT AWAY. You don't want your friends, neighbors or family to join under someone else, do you?

If you don't already have a PayPal account, you will need one. You can apply for one and not only is it FREE to set up, they even PAY YOU $5.00 for opening a new account. I'll send you the necessary info!

Tom Hyers <thyers@mcsi.net> wrote:
> Any comments on the Yaesu FT 1500... Like it or hate it ?
> Sound off !!
>
>

I've had one for about 3 months now. It seems to be a solidly built unit and everybody comments on "how small it is." I've had positive comments about the transmit audio quality. On receive, I use a SP7 external speaker rather than the built-in and the quality is adequate. Have only operated at 50w once - rest of the time has been at 5w.

About 3 weeks after I started using it (< 20hrs of operation) the P1, P2, P3, and P4 (programmable) keys on the MH-48 microphone stopped working which made a number of the FT-1500 features unavailable. :(I sent the whole unit to Yaesu Tech Support. The problem, apparently, was the microphone -- which they replaced and returned the FT-1500 (approx. 10 day turnaround).

Although I would rather not have had the problem -- Yaesu Tech Support was great!! The people I dealt with were all hams and their responses were rapid (same or next day EMail replies), courteous, knowledgeable, and very professional.

FWIW the "Preferential Memory Scan" feature does not work as described in the Operating Manual -- for my set and for the Yaesu Tech Support test FT-1500 -- and the problem has been forwarded to the engineers at Yaesu Japan. (Note: Normal 'scanning' works fine -- including the ability to designate channels to be 'SKIP'ped. However, the unit is also _supposed_ to allow you to designate another set of channels to be scanned in the preferential or "ONLY" mode. You can specify this set of channels BUT the procedure for initiating the scan that is described in the manual does not work every time.)

All in all -- and so far :) -- I do not regret the purchase and feel that the unit was a real value at the street price.

Hello all!
We live on the 3rd floor of an apartment building. What would be the best way to ground a 170 foot random wire we have up on the roof? Also what is the best grounding source for the radios in our shack? We were told that the screw on an outlet would work but we were also told that using the radiator would be better. Which is? Would eother put RF into the building? Also, to run the wire for either it would have to go under carpetting where people would walk. Would this be a problem? Any help will be greatly appreciated. Please email me direct with any info.

======
Excited you should be, Al. Best HT I've owned by far, and I've owned more than I like to admit. You'll love
the battery pack -- I bought 1550 mA-hour NIMH's for mine and at low power they last a long time. I have 2
backup battery sets for long trips. Nice to have the 6 Watts when you need it. Ruggedly built and great audio
-- a little hot -- so keep back from the mic a bit. Like most manuals -- you'll have to flip back and forth
between pages to set it up for PL, split, etc. But I make a cheat sheet after the first entry -- then its a
piece of cake. Get good audio reports with the built in mic. I have an AEA hotrod for distance work -- really
improves antenna gain.

Also I lost mine at a club meeting and it was returned all OK, so now I have my call sign and phone number
engraved inside the unit.

Thanks, Bill. Will take a look into that...

Someone also mentioned about only using pre-amp
mic's with ICOM stuff. Take a look at the current
ad for Heil stuff in the AES catalog, and it does
mention that the preamp needed for older ICOM rigs.

Maybe I'll call Heil & see what they have to say...
Or, get the iron out & build a small preamp & buy
a cheap-o mic (condenser from RS) & give it a go...

You would still need radials if the antenna is a 1/4 wl. You would need
a 1/2 wl design to be able to avoid them. But for what you want to do,
one would work. More would be better though."3 or 4" MK

Nico wrote:
>
> hi all,
>
> I have not used this old rig for years and have lost the operating manual!
> How do you tune the rig at start up?
>
> please consider...
> Nick

Set to band desired.
set load knob to about 1/3 range
set plate to where it's close to the "band dashes" desired
peak noise in recvr with the drive control
Set mode switch to tune
set meter to ALC
key rig and peak ALC with the drive control
set meter to rf, or have an external wattmeter hooked up
key rig and peak output using the plate control
Set meter to IP
set mode to CW, and have a key hooked up to tune, or key with the send
switch
key rig in cw mode, and apply full CAR until signal peaks
Dip the plate current using the plate control. You want to adjust for
full power out. Alternate between the load and plate controls. At full
power you should pull appx 200-210 ma IP current. If you show less than
that, add a bit of load, and redip the plate. Keep alternating between
load and plate until 200-210 ma. If you show more than 210 ma reduce
load a bit, and redip the plate. Remember the normal IP current with a
full cw keyup will be appx 200-210 mils. More than that, you are over
loaded. Less than that, you need to add loading.
This is important to assure a clean output. You will notice when you get
to full power, adding a bit more load will not increase the power
output, but only increases the plate current. You are fully loaded at
that point, and are assured a clean linear output. Hopefully , I didn't
forget anything... MK

Thanks for your comments, Rod.
It's funny you mentioned the NIMH's. I was also thinking about getting them. I've been very happy with them so far, in an Alinco 2-Meter rig and my Icom R2 receiver so far.
Who would have ever thought years ago that you could get 1.55 amp hours out of AA batteries.

Did you buy a second battery holder, or do you change out the batteries?
Al

Date: 2000-10-07 00:00:00 UTC
From: JJS <jarrodsmith@hotmail.com>
Message-ID: <stvdmrj3gr3d17@corp.supernews.com>
Source record: 70865
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I need a radius or gm300 to use for receive only, the transmitter can be dead. Going to use as a control receiver for amateur repeater project. It needs to be the 438-470 split or th 403-460 split.

Thanks,
JJ, K5RPD

1871. Re: Help with tuning an Ameritron amp

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-07 00:00:00 UTC
From: Frank Sweeney <fsweeney@mail.com>
Message-ID: <INOD5.7029$_P1.71881@nntp0.chicago.il.ameritech.net>
Source record: 70866

To tune-up any grounded-grid amplifier correctly, without a two-tone generator plus oscilloscope, a tuning-pulser, or an electronic-keyer: Set the amplifier to the CW position; for starters, apply full CW drive power; adjust the amplifier's tune and load controls alternately for maximum relative power output. The complete tune-up should take less than 10 seconds. The amplifier is now tuned up for CW or SSB operation. The mode switch should then be set to SSB for voice use.
If you are not sure where to preset the load control, start at the 1:00 o'clock position. It is safer to start off with heavier loading than necessary. This approach keeps the grid-current from getting out of hand.

No linear amplifier can be correctly tuned-up without applying full, peak, drive power, despite what the instructions may say.

The amplifier can be tuned-up more gently by using an electronic-keyer to key the transceiver, on CW mode, sending dits at approx. 50wpm. Since standard International Morse dits are half on and half off, the duty cycle is reduced from 100% to 50%. It is important to adjust the carrier control so that the transceiver is indicating a small amount of ALC. If this tune-up method is used, the amplifier can be tuned-up for SSB operation using the SSB, higher-V, switch position assuming one exists.

Looking for a Spectra 100 watt, high powered, T83 code plug for
a A9 version radio.

Do not send a code plug for a DES radio with X in the model
number. Trying to get away
from the DES set up.

Thanks, Jim

1876. Mod file: TS440S attenuation pad on AM broadcast band removal

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-07 00:00:00 UTC
From: Robert Casey <wa2ise@ix.netcom.com>
Message-ID: <39DFEC5D.5DBF62F6@ix.netcom.com>
Source record: 70871

Feel free to crosspost to packet: Use bid wa2ise01y2k (or if too long,
just truncate).

MODS@WW
bid wa2ise01y2k
Subject AM BC sensitivity mod

The TS440S has an attenuation pad hard wired on the spectrum between
500KHz and 1500KHz. You can open up sensitivity by removing it.
On the RF unit board, clip a lead on R13 (68 ohms), clip a lead on
R14 (68 ohms), and solder a jumper across R12 (220 ohms). These
are under a shield held down by screws on the RF board. I've noticed
no intermod problems and only the strongest stations (above S + 40)
overload (which can be solved by using the front panel attenuation
button).

Proceed at your own risk. WA2ISE

I just ordered this (subject:) rig , looking for a rugged single 2-meter band hand-held with 6 W TX power
that should have good RX intermodulation distortion performance due to the single band.
Another big plus about this rig is that it uses standard AA nicads.

Any T2H owners care to give me comments about this rig?
Your mission is to build up my excitement while I am waiting for the delivery truck to arrive :-)

I had the same problem with a different manufacturer's product.
Perhaps you can find a schematic somewhere. I found one for my ICOM R2 wide band receiver
http://www.butel.nl/ (sorry, no Kenwood), and was able to build my interface out
of junkbox parts like 2n2222's. I hope other NG readers can direct you to a link.

Hi Guys;
I am parting out a Johnson Ranger, It has a few parts left like the Tank circiut, all controls, Escutchion(?) & Dial w/pointer, most underneight components like xtal socket, mod xformer, small xformer behind the meter hole!
There are NO TUBES or power transformer or cabinet at this time.
Please e-mail me with what you need, i'll check the radio and let you know if its still there and then we will discuss the cost with shipping.
All items are as-is because the rig is non functional at this point.

There has been lots of talk about fuel pump noise, but I find my '97 explorer has very prevalent **transmission** noise (as best as I can tell).

There is a very strong whine that I hear on 440 (no hf on board), that seems directly proportional to speed - no discernable drops in pitch when it shifts.

It stops completely when the vehicle is stopped.

I chalk this up to speedometer transducer RFI.

Hope this helps.

don

Many have already written how to tune, but I'll add a couple of cents
worth... If you run ssb, to be linear you must load the rig for full
power. If you tune up in cw tap, and then switch to ssb without
reloading, you will be underloaded and splatter. Tune first in cw to get
in the ballpark, then quickly tweak the tuning again in ssb. "Remember
quickly!!!". As far as the power out, they state 800 watts output from
that amp, but I disagree for maximum life. I'd only run 600w from four
811's. They push those tubes too hard if you follow the instructions. I
consider 150w a tube the max if you want good tube life. Note the old
collins 30-L1 amp. It also had four 811's but only ran 600w as is
proper. 800w from four 811's is asking to replace tubes often. Also,
always watch the grid current. That one meter tells you everything you
need to know about the state of loading for any amp. If the grid is too
high, you are either underloaded, or are overdriving the amp. Reduce
drive and recheck until grid is in the normal range. If the grid is
lower than normal, this means you are heavily loaded. This actually is
good as long as you don't get carried away to the point of drawing
excess plate current. With the amp running in this state, you will be
very linear and clean. So anyway, high grid=bad news. MK

> reloading, you will be underloaded and splatter.

Here I have to respectfully disagree, mainly because of the power supply.
It's true to get the maximum efficency you would tune for "tilt", but
unfortunately in the real world, many power supplies are not up to the task.

Often, and with all, but the heavy duty amps rated for continuous key down
at maximum output, amps are incapable of being tuned for max output in any
but the tune/cw position.

This is because when tuning for max, the power supply voltage may drop as
much as 25%, or even more. If the PS voltage does not drop at full key down
power, then it will work.

As some one posted earlier, to tune in the "full power" position use a keyer
at high speed (in the SSB position) and a scope to watch the output. That
works very well and does not drag the PS voltage down so you end up properly
loaded.

Any where near properly loaded, grid current should not be a problem, unless
over drive is applied.

Above all, tune into a dummy load, then switch to the antenna and peak the
amp tunning. Unless you have a transmatch in line with a 1:1 SWR for the
rig to see.
Then the tunning can be done on the dummy load.

Roger (K8RI)

>Tune first in cw to get
> in the ballpark, then quickly tweak the tuning again in ssb. "Remember

> quickly!!!". As far as the power out, they state 800 watts output from
> that amp, but I disagree for maximum life. I'd only run 600w from four
> 811's. They push those tubes too hard if you follow the instructions. I
> consider 150w a tube the max if you want good tube life. Note the old
> collins 30-L1 amp. It also had four 811's but only ran 600w as is
> proper. 800w from four 811's is asking to replace tubes often. Also,

Dan,

I had a TH-315 and Yaesu 727 and several other HTs all without manuals to figure out the dual function keys. I got from HRO a book Called the Lost Users Manual and it had all of mine including the TH-315.

Good luck and enjoy your 315 it is a great little 220 rig.

I had the same problem here a couple of weeks ago. I talked with my ISP. At first he said it was the eham sight. I checked with folks from other ISPs and they were able to access it no problem so talked with server again and he had to reset some sort of switching arrangement. It has been working fine since then.
Talk with your ISP as someone else suggested.

Source record: 70818

Bought a rat shack Optimus atomic clock radio for about $25 on sale.
works pretty good, except it's not 24hr format. If it was, it could
be the shack clock displaying Zulu time for logging contacts. Set it
to "London time".

This clock autosets itself against the WWVB time standard signals.

Hi all

When my '599 lost its memory awhile back, I thought all I needed to
do was to replace the lithium battery, reprogram, and then, back to
business.

Well... replaced the battery, reprogrammed, verified that the radio was
working.
Came back a few hours later, and ... nada. The LCD display was not back to
the
garbage that was present prior to battery replacement, but nothing I had
programmed was still there. Memories completely gone.

So, my next option is to send it in for repair, but am curious... has this
happened
to anyone else? (My bet is that the memory itself is whacked, but... no
schematic
or time, for that matter.)

Dear Friend

You'll love this

Imagine your website having thousands... even million
of visitors every week.

Would that help you earn more money?

Then get the latest tactics to pull in visitors to your
website like a giant magnet.

Download Superior Marketing Tools & Tactics
Software... It's 100% FREE!

You will discover how to reach 10 Million people for just
ten dollars per million.

A step-by-step, easy to follow, directions on how to pull
over 1000 people per day to your website FREE... (you
won't
spend a dime in advertising costs).

You'll learn how to backdoor your way into the 3 best
search engines... these search engines are
responsible for 89%
of all search engine traffic.

You'll get a tool to determine what keywords you
should use BEFORE you submit your website so you'll
get the most
visitors to your website once your listing appears.

You'll get an instant Meta-tag tool to get a higher
ranking in the search engines.

Our secret to maximize your profits... something most
people would never know about.

What Ezine's are best to advertise in to get the most
from your advertising dollars.

Viral advertising tactics that most people never thought
of.

How to use free incentives as a lead generator.

$195.00 worth of secret reports and how to use them to
attract visitors to your website by the truckloads.

And More!

For the Web address, mailto:
mailto:gerrard@oorhame.worldonline.co.uk

I will send the Web Address by return and you can
enjoy the free software!

Sincerely,

Gerry

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

> the scan that is described in the manual does not work every time.)

I noticed this too..., for me sometimes I'd get "preferential scan",
sometimes
plain old scan.

I've finally figured out what's going on (I think), here are the
details:

First some background. Here's how it's supposed to work:

Each memory channel has a 'skip' setting which can be set to 'off',
'skip',
or 'only'. 'Off' is the normal setting. If the channel is set to
'skip',
it is never scanned.

To start scanning, one holds either the 'up' or 'down' button on the
mic
for about a second. The way it's supposed to work is: if you start
scanning
from a memory which is set to 'only', then it's supposed to scan only
the
memories set to 'only'. If you start from a regular memory (set to
'off'),
all memories (set to either 'off' or 'only') are scanned.

Here's what I think is happening:
It's what memory the radio is on when you _LET GO_ of the scan button,
rather than what memory it's on when you depress the button that
matters.

Here's how I have things set up so that I can reliably start
'preferential
scan':

I have a block of three or four contiguous memory slots which I always
leave

set in the 'only' mode. To start preferential scan, select the first memory
of this contiguous set -- then back up a couple channels. Now hold the
UP button down just long enough to start the scan. If your reactions are
about like mine, you will have let the button up while the radio was scanning
one of the block of 'only' memories, and the radio should be enter
'preferential scan' mode.

If this is not clear, let me know, I will try to explain again (I've got
a nasty cold right now and can't really think straight.)

Yes. I am able to start a "preferential scan" _most_ (but not all!) of
the time using a similar work-around(?? :). However, it in NO way
resembles the procedure described in the manual -- or, IMO, the one
intended by the set's designer(s).

1944. Mod: TS-450S/TS-690S AGC Solw

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-08 04:24:25 UTC
From: AK2F <ak2f@my-deja.com>
Message-ID: <8rostm$b12$1@nnrp1.deja.com>
Source record: 70876

Kenwood rigs usually stand out for their audio quality. This
modification slows the RC time constant of the AGC (automatic gain
circuit) in the TS-450S and TS-690S family of radios to remove some of
the noise and distortion that was dominant with the standard values.

With reference to the schematic diagram, resistor R146 on the IF board
acts as a bleeder/discharge resistor for the various capacitor values
switched in by IC7. Increasing this resistance value, slows down the
discharge of the AGC, resulting in much smoother sounding receive audio.

You need appropriate tools to work on a surface mount pc board. Turn
the radio upside down and remove the bottom cover. With the main
tuning know pointing towards you, the board on the right side is the IF
board. Along the left side of the IF board, find capacitors C114
through C119 towards the back of the rig. The surface mounted
components are located on the foil side of the board underneath this
section. Disconnect the 2 ribbon cable jumpers and the 8 screws
holding the IF board in place. Carefully flip the board over and
locate a small SMD resistor marked with 474 on the foil side underneath
the cluster of electrolytic capacitors (C114 - C119).

With an Exacto type knife, carefully cut one of the traces in series
with the 474 resistor (R146). Solder a 2 Megaohm resistor across this
cut. This will increase the RC value from 2.2 seconds to 11.6 seconds
(not really that long). Some hams may want to use a variable resistor
or a switch to vary or switch the RC time constant.

Re-assemble the board, jumpers and bottom cover and enjoy the
modification.

Disclaimer: Perform this modification at your own risk, and be aware
that it may void the warranty on the radio. I assume no responsibility
for any consequences of performing the mod. I have performed the mod
to my personal radio (TS-450S) and am very satisfied with the results.

1947. Re: Discriminator Audio Tap Kenwood TM-541?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-09 00:00:00 UTC
From: fsweeney@my-deja.com
Message-ID: <8rtdtlmbc1@nnrp1.deja.com>
Source record: 70748

I can offer a helpful hint only as I do not have the radio or the
schematic. The audio feeding into the CTCSS decoder is pretty close to
pure discriminator audio, if you can find that pt you'll be in good
shape. Of course you know that you'll want to run the audio through
some de -emphasis to get rid of the tinny sound before you feed it into
the audio of the repeater xmtr

10K
eg: disc audio -/\/\/\----- to TX
|
|
--- .33uF

|
|
V

Sorry I couldn't be more Helpful. Doesn't Kenwood include the
schematic with their radios anymore?

Good Luck

For Sale:

Kenwood TM-733A dual band mobile. Just back from AAVID for alignment/repair (had a bad mic cable as it turned out). Very good condition, a few scratchs on the top cover. $325.00

Larsen 2/70 NMO mount antenna... coil is brand new, whip is used but in perfect condition. $30.00

Larsen 2/70 Duplexer, used but in perfect condition. $30.00

All three above for $375.00 shipped.

Kenwood TR-751A 2M all mode... cosmetically an 8 or 9, works fine. No mobile bracket. mic works but Up/Dn and DMFT tones on mic don't, mic needs to be repaired or replaced. $275.00

Perth Outrunner 10-160M mobile antenna... I don't believe this has ever been used... $250.00

Wanted:

10-80M vertical in "GOOD" condition... will swap towards any of the above.

Email Address Is Below !

Brand New ASTEC:
VS3-K0-K2-K3-00
Single Phase 85 - 264 VAC /// 47- 440Hz Input
Three terminals for output:
one 2v @ 150amps
two 5v @ 150amps
three 12v @ 62.5 amps - For Ham & CB Gear

Detailed Specifications On Power Supply:
http://www.astec.com/products/1150.astec.pdf
(Must have Adobe Acrobat installed to view)

This page show a different model for sale:
http://www.newark.com/
Search for "manufacturer" part number and enter "VS3"
for other models then use the PDF (Adobe) specification
chart to compare output watts / amps.

One example is a VS3-C6-C6-20
which is VS3 or 5x8x11 case
Terminal one is "C6" which is 28v @ 32.1amps
Terminal two is "C6" which is 28v @ 32.1amps
The unit on that page is about $2,000

I'm selling this for $120 UPS Shipped

1958. For Sale: Kenwood TS-820 (S) transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-09 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <39e18b90.7968819@news.pipeline.com>
Source record: 70836

For sale: Kenwood TS-820 transceiver with (S) option built in digital display . Unit is in very good to excellent cosmetic condition - about an 8.5 or better out of ten.

The rig is fully operational with full 100 + watts output.
I comes with an original owners manual, original Technical pamplet, and a W7FG technical manual.

$275 plus shipping (it's heavy at nearly 40 lbs).

73,
Doug/WA1TUT

"Use it up, wear it out. Make it do, or do without."

1959. FS: ATLAS 350XL transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-09 00:00:00 UTC
From: dslosty@pipeline.com
Message-ID: <39e18cdf.8303447@news.pipeline.com>
Source record: 70837

Fore sale, an Atlas 350XL transceiver in very good to excellent
condition. Cosmetically it's around a 9 out of 10. The only
imperfections are some small scuff marks on the front panel trim ring.
Front panel is perfect and the case is almost perfect.
I've gone thru the rig and have done some minor repairs and
an alignment.

It has the digital readout, CW filter, full QSK, 350 watts PEP input
power with a maximum of 160 - 200 watts output. With the addition of
aux crystals, it will go on the WARC bands.

Requires a 35 amp 12 volts supply since maximum key down current is 32
amps. A supply is not included. It comes with a W7FG manual copy.
$300 plus shipping.

73,
Doug/WA1TUT

"Use it up, wear it out. Make it do, or do without."

Source record: 70839

Hi and thanks for reading this posting. I have for sale a Very HEAVY DUTY 4 Element 10 Meter Beam. The Beam is made of aircraft aluminum. The elements are 1" and 7/8" which doesn't sag at all. All the the "U" clamps and hose clamps are all stainless hardware. The gamma tube is cooper, aluminum and polystyrene. It was built it to last. If you are looking for a 10 Meter Beam that will hold up to most all cimates, this is the one. This is "Home Made" following the ARRL Antenna book design but stronger. It was only out in the climate for 3 months and is "Like New". Only reason for selling is that I got a Tri-Bander and don't need this one. Will sell for $150.00 (the materials cost more than this price) + shipping. You can see pictures of the beam at: http://www.srv.net/~wa4vrv/beam.htm

Hello all,

I would like to find the discriminator audio tap on the Kenwood TM-
541 1.2 GHz mobile. I am using it for a repeater receiver and would
like to bring in discriminator audio. I see the mod for the TM-531 but
I don't know if the chip is the same.

Any help would be greatly appreciated.

Thanks in advance,
Steve

Take the top off the radio. In the front right corner with the front of the radio facing you, there is a plugin board that contains all the regulators and voltage adjustments for the entire radio. There is one pot. adjustment for the 10 vdc used throughout the radio and others for USB, LSB, CW, RTTY. If I remember correctly, there are five altogether. Be sure the 10 vdc is set correctly, first. Then adjust the others. I can't guarantee this is the problem. However, in the 20+ years I had my TR-7, once a year, I simply had to pull the board out and reseat it. One or several of the voltages did not get off the board through the connector. If the PBT works, but does not receive/xmt without the PBT, this is probably your problem. Simple to fix if that's it.

Source record: 70846

Yes you can use the AT-150 with the 706, 706MKII and 706MKIIG, however, you
should get the pig tail adaptor cork that plugs in the 13 pin DIN. It
splits this into an 8 and a 7 pin DIN and the AT-150 plugs right in.
Expensive adaptor cord though, and you don't get 6 meters with with AT-150.
I have used mine with a 706MKII and MKIIG with this cord, but usually just
leave my 735 hooked up to the AT-150 as they were designed for each other.

From: Walter Dorsey <waltd@msn.com>
Message-ID: <39e232d6$1@news.microsoft.com>
Source record: 70847

I am looking for a device that will allow me to connect the "EXT Speaker" jack on 3 rigs (Scanner, 10m and 2m/70cm) to one common speaker. I have seen "line level" devices and mixers... I don't need any volume control, as I can just turn the volume up and down on the individual rigs.

Anything pre-made out there? If not, schematics of such a device- hints and or suggestions appreciated.

Thanks,
waltd@msn.com

1971. Heathkit SB-220 Amp 10 thru 80 meters w/manual for sale:

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-09 01:53:08 UTC
From: yardleyite@aol.com
Message-ID: <20001008215308.05128.00000813@ng-fy1.aol.com>
Source record: 70826

Heathkit SB-220 Amp in excellent condition physically and electrically. Ten through Eighty meters. I just replaced the parasitic chokes and tested it for output. 100W drive gets over 1300 watts out on 20 meters. More on the lower bands and a little less on 10 and 15 meters. The original tubes have been replaced with a pair of Eimac 3-500Z's,not Chinese tubes. I have the full manual and all documentation.
Asking $550.00 plus shipping. This amp is heavy (over 60 lbs.) and I would prefer you pick it up to save shipping charges and to take it for a road test.
Please reply to my email address only.

1975. FT-50 Won't Turn On

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-09 05:24:24 UTC
From: treynolds@my-deja.com
Message-ID: <8rrkq5$8g3$1@nnrp1.deja.com>
Source record: 70830

I would appreciate any help that the group can give me. I have had this ongoing battle with my FT-50 since I purchased it. The problem is that the ON button doesn't work. When you press it, it should make contact with two copper lines and short them out, like TV remote buttons.

At first I could take the thing apart and put some graphite powder on the back side of the button. It would then start making good contact. After six months or so I would have to apply it again. But this time that doesn't seem to do it. I can disassemble it and *sometimes* get it to turn on by shorting the connections with a metal object.

At this point I am willing to try any kind of kludge that will get the thing on and off.

Thanks in advance and 73s,
Tom

>H2 12 Watts and any other info. out there. Thanks

If thats the same radio I have with a oval shaped speaker in front...
8 channels, made around 1975,
there is no such thing as programming info...it is controled by
quartz crystals only. One crystal per channel.
They are usually set up to receive vhf low (30-50mhz)band and vhf high
(136-174mhz)band.
In order to recieve uhf-t (450-512mhz)band, you have to re-locate the
vhf high board to the proper location in the chassis!

Good luck!

1977. ICOM Q7A has computer interface

Newsgroup: rec.radio.amateur.equipment

Do you mean a software for the 920 in particular or just sstv software for any computer? There are quite a few sstv programs out there that will work. JVFAX, w95sstv,chromapix, etc. What route you gonna go? Sound card or op-amp converter? The old jvfax can do op-amp real well. For sound card I prefer either w95sstv, or chromapix. But both are shareware, and not exactly cheap. I think chromapix is 120$, but it's a real good program. Pretty much the best of what I've seen so far, but w95sstv works real well also, and is quite a bit cheaper. "Both sold by the same company". Try http://www.ncsl.co.uk/ncsl.html for one place to download a few programs, and http://www.siliconpixels.com/ for w95sstv and chromapix. They also sell a dsp program that works pretty well.
I haven't run much sstv lately. I changed computers back when I did, and the new puter timing clashed with my programs. I've tried the new sound card programs and seem to work well, but haven't paid for any yet. I used to use JVFAX 7.0 and an op-amp converter. It worked fine, but the newer programs better. Chromapix is good if you want to cough up the cash. It'll do some real nice quality pix. You might just try typing sstv into yahoo! or whatever. You'll get a load of hits. MK

Maybe, but seems it would be a pretty weak P/S to not be able to handle
a tuneup at full power. I've never had an amp that couldn't handle a
quick full power key down. Sure, the voltage drops a bit, but it's going
to anyway no matter how keyed. The smallest amp I've used was a heath
SB-200, and it could go at 600w "full power" for short times. Dunno, I
don't think I'd want an amp that was as flimsy as you describe. The
dynamic regulation would be the pits. I guess I'm partly spoiled on my
henry also. g It's very stiff. I can load up full power blow and go no
problem at all and the voltage drops very little on that thing. I guess
if I had a weak one like you describe I would use the keyer to load. But
I'd be nursing an amp like that at a lower than max power to keep the
regulation within bounds. The main problem I've seen in the ameritron
811 amps were people pushing them too hard. And part of this is due to
the overly optimistic ratings they stuck on the amps. IE: 600w for 3
tubes, and 800w for 4 tubes. Myself, I'd only run 450 and 600 watts in
those cases. 150 w a tube. I had a friend of mine that had one, and he
ran it flat out. That is for short periods of time between tube
changeouts and new chokes, etc..I think the amps are ok, but should be
idled back a bit to last. I think the AL 80 type single 3-500z amps a
much better deal. They are pretty stout. MK

John,
Before you go too far, this "counting up" is nearly ALWAYS caused by poor
contact on the digital board connectors. Take the screw out of the center
of the board (big board in the front center of the chassis top with cover
off), make a couple of "hooks" out of a coat hanger or similar and pull that
board up a bit, then reseat a few times. That should fix the counting
problem. However, if you have no voltage to PBT board afterwards, that's
yet another problem.
73,
Don, WB5HAK

Tom
Sounds to me like u need to learn the name of the local UPS guy and have him
ship it to Yaesu repair in Calif.

OOPS! I first posted with the wrong address. This should be right.

Hi there. I have a Shakespeare 120 HF antenna I'ld like to sell. This set-up would be for a 32 foot antenna if I wasn't missing the second element. I have the case and some guy/tie-down ropes. There is no mounting base. The second element will cost about $44 from Shakespeare. If anyone is interested please write me at: rterra@sonic.net.
Thanks, rterra.

1985. Chargers: Slow vs Fast vs quality?

Newsgroup: rec.radio.amateur.equipment
Date: 2000-10-10 00:00:00 UTC
From: Richard Valentine <rwv@home.com>
Message-ID: <VJIE5.16405$P82.2453172@news1.rdc1.ct.home.com>
Source record: 70775
Cross-posted to: rec.photo.digital,rec.radio.amateur.equipment

Question:
Why not have Only Fast Battery Chargers?
Is there a difference in quality/strength or how it affects overall battery life with a fast, vs a slow overnight charge?
I'd like a fast charger, but dont want to sacrifice performance. I wonder::
If I charge fast,, is my theoretical recharge life now 750 times instead of 1000? I wonder if those 1600 Ma's embed for as long, or does that take a trickle charge. haven't seen much on this topic. (I'm concerned mainly with using 1600 ma NiMH batteries.)
Anyone know??
Thanks, Rit.

1986. HP8656A Signal Generator Question
